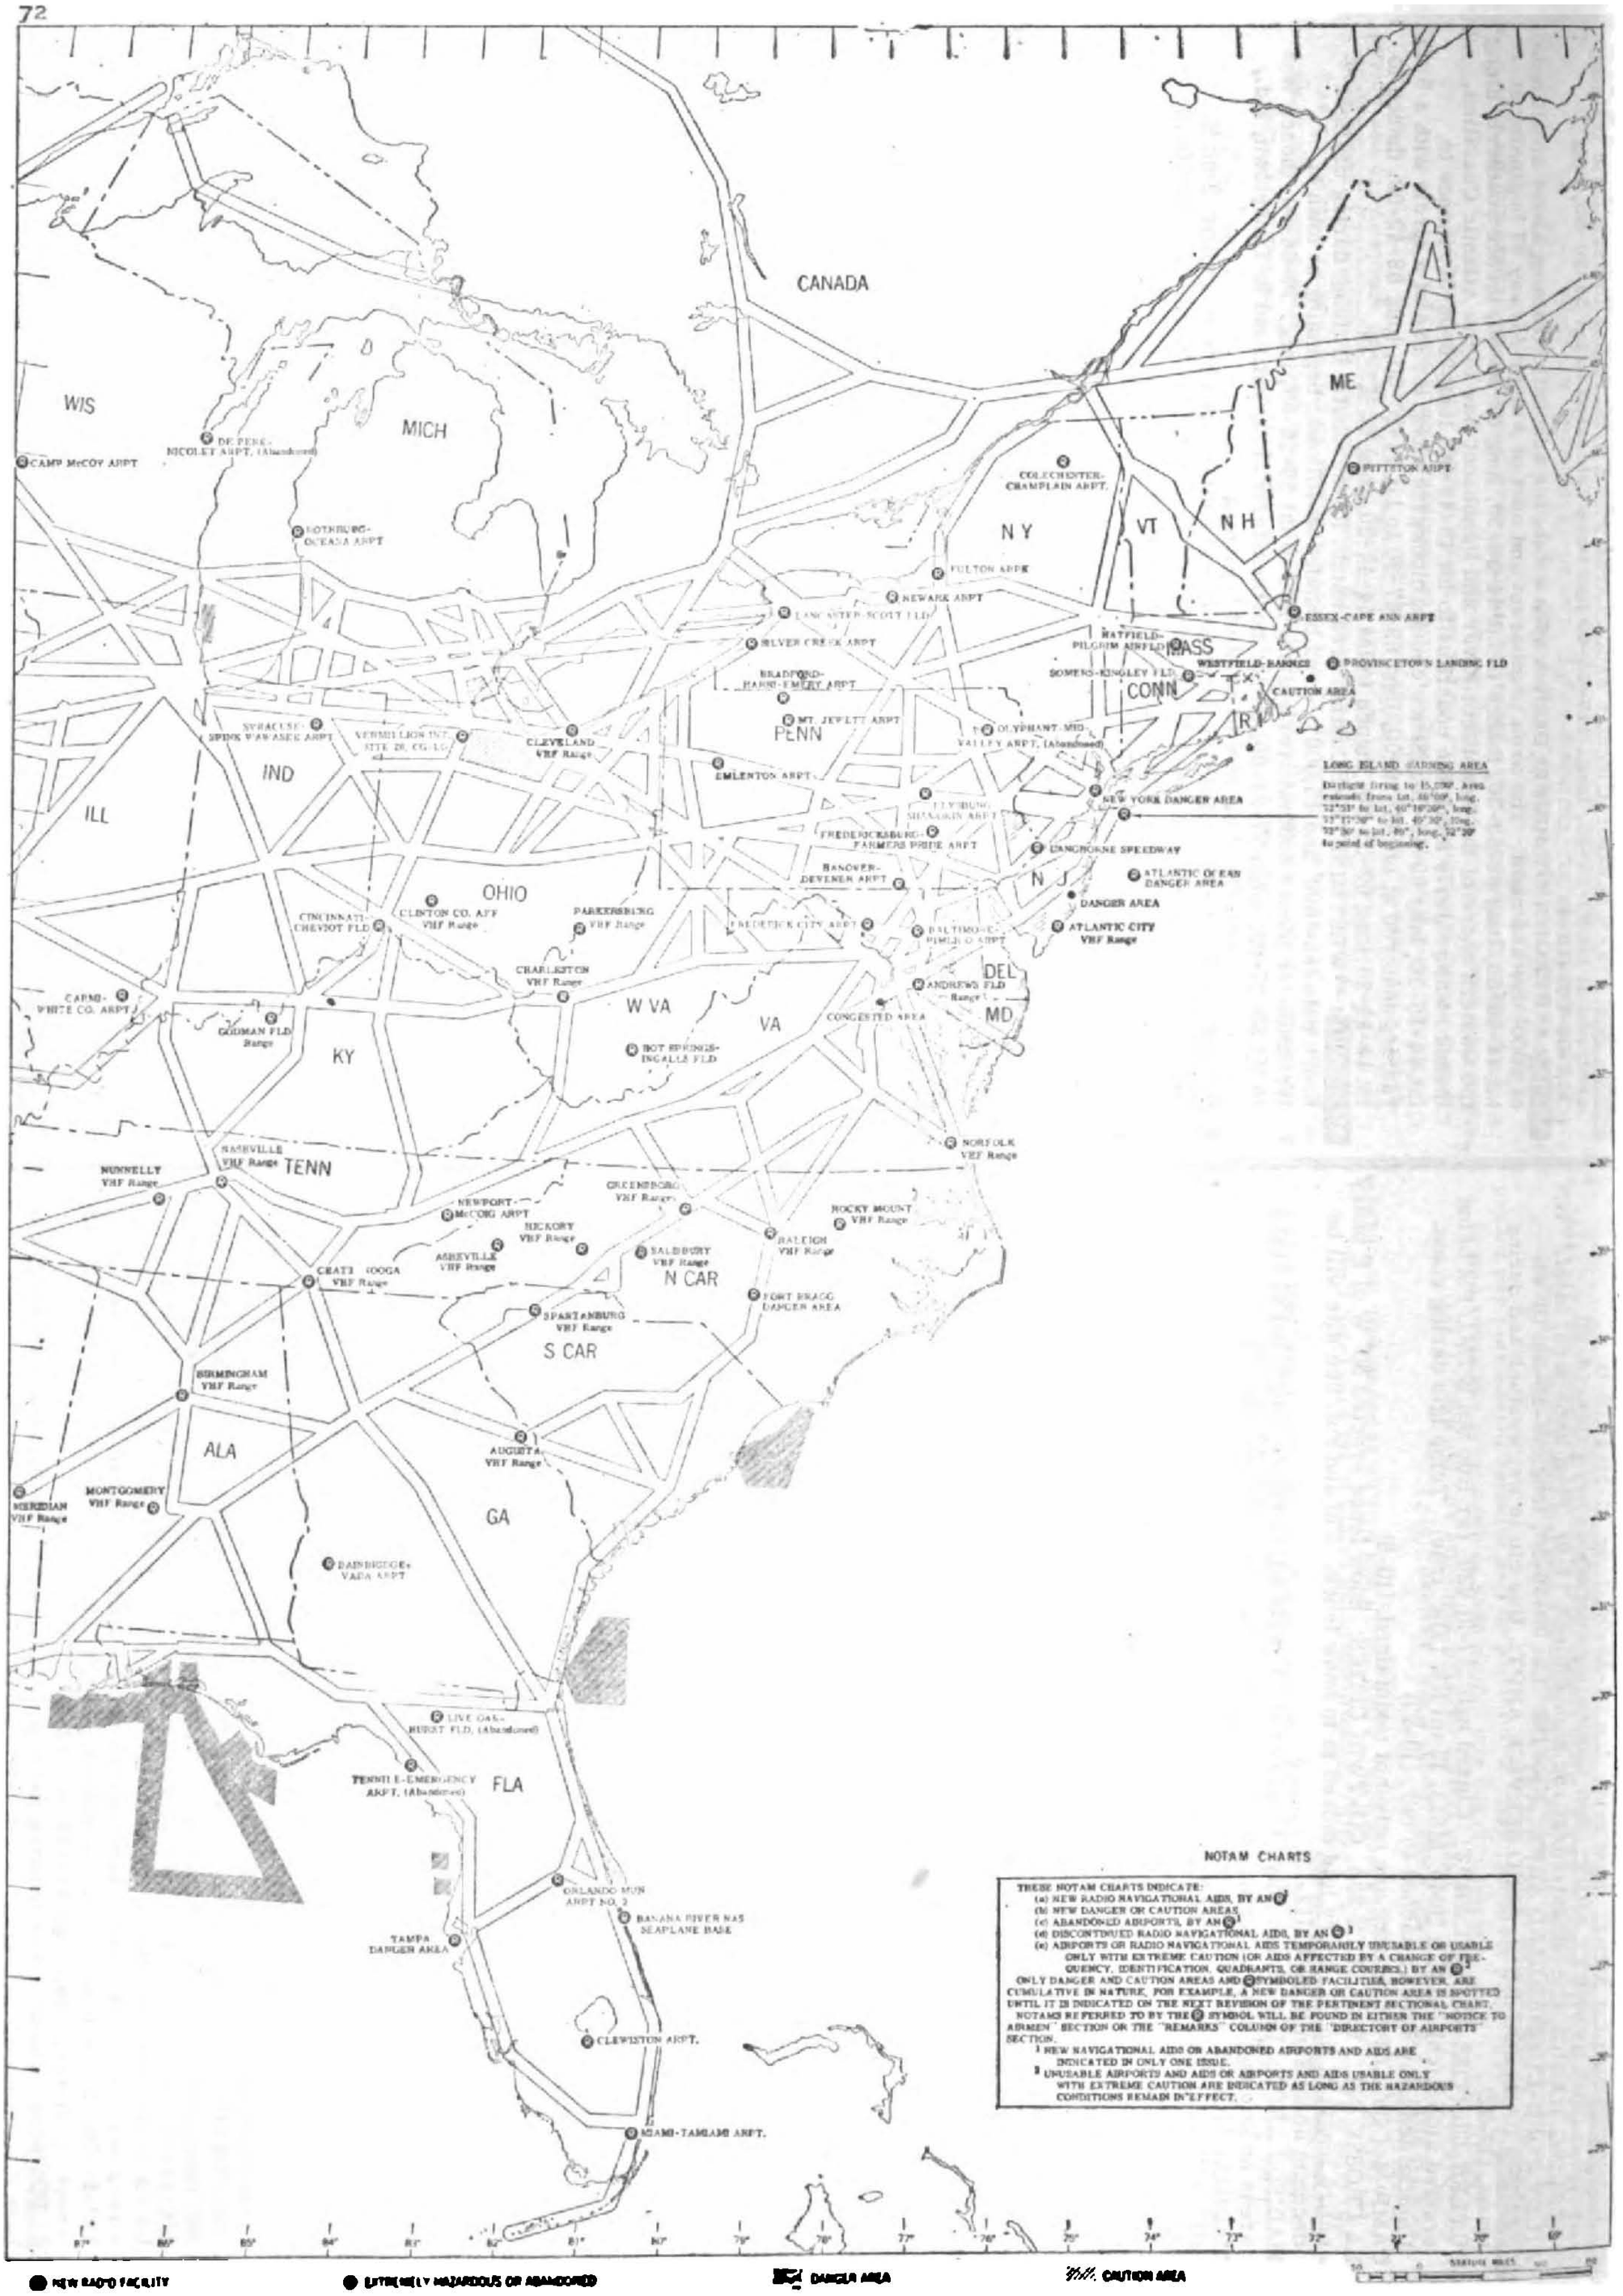
RICHMOND-HERMITAGE ARPT: All traffic left hand. On take-off, climb to 400', make 90° turn to left and climb to 600'. If leaving traffic pattern, turn left 90° and climb to 600' and make 45° turn right. If remaining in traffic pattern, make 90° left turn at 600' and climb to 800'. Enter traffic at 45° to rnwy on down-wind leg at 800'. (11-29)
RICHMOND-PARNELL ARPT: Const equip. on S end N/S rnwy, mrkd. (10-14)
ROANOKE-WOODRUM FLD: Exten local traffic days. Acft landing without establishing rdo commun with twr must conform to local traffic patterns. Observe twr at all times for lgt gun signals especially on base leg and final approach. Clear rnwy immediately after landing. Mil acft utilizing VHF freq should listen for control twr instructions or observe lgt signals from twr in response to their transmissions. All acft departing should determine proper rnwy and taxi route from twr or opers prior to taxiing. Equip. adj all rnwys. (7-22)
SHENANDOAH ARPT: N/S strip rolling, ends not visible from opposite ends. Grading equip. on fld. Soft in wet weather. NE/SW strip mrkd by cone mrkrs. (10-16)
WINCHESTER ARPT: E end E/W strip rough. Contact Front Royal Radio or circle fld before landing. (10-16)
WASHINGTON: BELLINGHAM ARPT: Do not taxi off surfaced areas-sodded portions soft. Day traffic controlled by white T center of arpt. Pilots of all unscheduled acft must register at the CAA Communs Bldg. Pilots of all scheduled acft using Bellingham Arpt as an alternate landing fld must register also. (8-27)
BREMERTON-KITSAP CO. ARPT: S half NE/SW rnwy sinking 6 to 8" in spots. (8-14)
BREWSTER-RIVERVIEW ARPT: Right traffic on ENE take-offs and landings. (11-10)
BUENA ARPT: Right traffic E take-offs and landings. (10-21)
CHELAN ARPT: NE/SW strip overgrown with weeds. N/S strip rough. (11-10)
CLE ELUM ARPT: Right traffic E take-offs and landings. S traffic pattern at all times. Closed for short time after hvy snow. (10-21)
COLLEGE PLACE-MARTIN FLD: Const. equip. on strips. Strip 2500 x 150' S side of fld flagged for landing. Taxi strip adj. Center of fld rough and unsafe for landing. (4-29)
CONNELL ARPT: Soft during spring thaw. Undulating grass and weeds 18" high. (8-21)
EPHRATA ARPT: Wild horses on fld intermittently. (11-24)
★EVERETT-RADIO: Nov 28, N course realigned to 145°.
EVERETT-PAINE FLD: Open to acft after sunset only with prior approval of arpt manager. Permission must be rcvd prior to take-off. Rnwy in use lgtd during hrs of darkness. (12-20)
GRAHAM-PUYALLUP ARPT: Right traffic N take-offs and landings. (10-21)
HUNTSVILLE-TOUCHET VALLEY ARPT: Left traffic pattern. 1st turn at 600', hills to N and S. (5-16)
KELSO ARPT, SITE 61A, SF-SA: Soft spot SW corner, flagged. (11-25)
MALOTT ARPT: Right traffic on E and ENE take-offs and landings. (11-10)
McCHORD FLD (TACOMA): Use rnwys, taxiways only. Equip. on fld. (12-11)
METALINE FALLS-SULLIVAN LAKE ARPT: Before landing trans circle U.S.F.S. bldgs (adj to arpt) in effort to have vehicular traffic across landing strip temp stopped. (4-22)
MOUNT VERMON OLF: Closed to all acft except those permitted by the Commanding Officer, NAS, Whidbey Island. Training use rqrs 24 hrs advance notice thru Whidbey Island NAS. Bcn inop. (10-31)
NELSON RIDGE, BCN SITE 6, SA-HL: Temp inop-being relctd to lat 47-11-30, long. 121-01-42, 1-1/2 mi SE of present lctn. After relctn bcn will be recomm with no change in char. (12-8)
NORTH BEND-SNOQUALMIE PASS: South traffic pattern. (6-7)
OKANOGAN-LEGION ARPT: Right traffic on WSW take-offs and landings. (11-10)
OLYMPIA ARPT: Rot. bcn flash. green and yellow used to warn local and trans acft of approach of scheduled transport acft. Bcn turned on five minutes before arvl and turned off upon arvl and landing of acft. (12-4)
OPPORTUNITY-LEMEN ARPK: Right traffic take-offs and landings to NE. (10-31)
OROVILLE-DOROTHY SCOTT ARPT: Right traffic on S take-offs and landings. (11-10)

WASHINGTON: PORT TOWNSEND-COUNTY-CITY ARPT: Right traffic E take-offs and landings. (10-21)
PUYALLUP-S & S AIRSTRIP: Right traffic S take-offs and landings. (10-21)
RATTLESNAKE LEDGE, BCN SITE 2, SA-HL: Temp inop. (12-18)
SEATTLE: Univ. of Washington operating a captive balloon for fog research from the N shore of Portage Bay, Seattle approx midway between Lake Union and Lake Washington along ship canal. Balloon is 6' in diameter unmrkd and unlgtd with an instrument weighing approx 1-1/2 lbs suspended below and secured to launching reel with cutty-hunk line. Balloon released to various alts up to 2000' anytime day or ngt during formation and dissipation of fog in this area. (9-12)
SEATTLE-BELLEVUE AIRFLD: Right traffic when landing to S. (10-21)
SEATTLE-BOEING FLD: All unscheduled acft landing at Boeing Fld must register with County Fld Office, except those who have made other arrangements with fld management Avoid flagged areas. Holes E side main taxiway, N and S of Admin Bldg. Use ctn when taxiing. Dirt strip closed. All acft use main rnwy and make patterns W of fld. No touch-and-go landings for non-rdo equipped acft. (11-21)
SEATTLE NAS: Single-engine acft approach from Kirkland 1500' descending to 1000' over the stn. Rnwy 14-32 lgtd 30 minutes prior to arvls and dptrs between sunset and sunrise and bn req. Tetrahedron lgtd sunset to sunrise. (5-27)
SEATTLE-TACOMA ARPT: Scheduled opers in progress and not avail. for practice landings by trans acft unless acft is equipped with 2-way rdo and are in ctc with Seattle approach control. Equip. on fld. Approach lgt lane will be operated on req and when ceiling 1000' or less and/or visibility 3 mi or less. (8-28)
★SPOKANE-RADIO: Dec 9, INSAC moved from Felts Fld to Geiger Fld in bldg No. 28.
★SPOKANE AFF-RADIO: USAF GCA fac now operates cont during IFR; 0800 to 1700 Mon-Fri; and on 30 minutes notice all other times. (12-9)
SPOKANE-FELTS FLD: Rdo Stn KGA erecting twrs 6 mi SSW (198° true). (11-9) Lgt non-rdo equipped acft use mrkd graded area S of main rnwy. Fancher Bcn near Felts Fld inop. Take-off and land on sod area before reaching taxiway near center of fld. N side rnwy mrkd. Equip. on fld. Tetrahedron uncontrollable-free swinging. Equip.-ditches being dug S of W end of main rnwy. (10-23)
SPOKANE-GEIGER FLD: Equip. on NE/SW rnwy. (12-15)
SPRAGUE ARPT: Entire fld rocky-dangerous. Emerg use only. (10-21)
TACOMA-BARRY'S SKYHARBOR ARPT: Right traffic W take-offs and landings. (10-21)
TACOMA-CITY VIEW ARPK: Equip. on fld days. 1600' of S end N/S rnwy usable, but rough. (12-2)
TOLEDO-WINLOCK, SITE 63B, SF-SA: Sodded portions fld soft. Use rnwy only (11-19)
TONASKET ARPT: Right traffic SSE take-offs and landings. (11-24)
VANCOUVER-PEARSON AIRPARK: ESE/WNW strip under const. (10-21)
WALLA WALLA AFF: No opers office. (9-3)
WENATCHEE-PANGBORN FLD: Apron and parking areas being enlarged. Equip. on fld. Use taxiways with ctn especially at ngt. (9-16)
WHIDBEY ISLAND NAS-AULT FLD: Bcn operates during IFR and from sunset to sunrise. Warm-up aprons avail. for all rnwys. (4-3)
WEST VIRGINIA: CHARLESTON-RADIO: Visual-aural VHF rng in cont oper for test
★ purposes only. Freq. 108.7 mcs, ident. "IKN". INSAC and weather reporting facs established at Kanawha Co. Arpt Nov. 29.
CHARLESTON-BOLLINGER FLD: Lgts on 240° twr Rdo Stn WKNA 5 mi N inop. (7-28)
★CHARLESTON-KANAWHA CO. ARPT-RADIO: CI twr comm Dec 2, on 278 kcs., 126.18 mcs.
** Grds 3105,3117.5 kcs., 126.18 mcs. Operates 0930 until 15 minutes after official sunset.
FLD: 36" clear and green rot. bcn operating sunset to sunrise is mounted 51' above grnd on SW corner of landing area at lat 38-22-30, long. 81-35-30. Acft unable to ctc twr should observe lgt signals. Equip. on fld days. (11-9)
CLARKSBURG-PATTON FLD: Right traffic on landings to the S. (8-5)
ELKINS ARPT: Ctc Elkins Rdo or circle fld before landing. (3-14)
**MADISON ARPT: Lat 38-06-45, long. 81-51-00.
PARKERSBURG-RADIO: Visual-aural rng on 109.1 mcs, ident. "PV" operating for test purposes only. (9-27)
**[illegible]PI ARPT: Lat 39-05-30, long. 80-02-05.
**SOUTH PARKERSBURG-QUINN'S ARPT: Lat 39-14-00, long. 81-33-00.

**WEST VIRGINIA: WELCH ARPT: New arpt. Lat 37-25-00, long. 81-31-45.(8-1)
WESTON-LOUIS BENNETT ARPT: Soft spots after continuous hvy rains. (4-10)
WHEELING-RADIO: Ctn-visual-aural rng unmonitored. (4-9) Freq 108.3 mcs, ident. "WN"
**WILEY FORD-CUMBERLAND ARPT: New fld: Lat 39-36-30, long. 78-46-00. (9-24)
WISCONSIN: BARABOO-BELL AERO SERVICE ARPT: Use ctn in wet weather and during thaws. (10-22)
BUTLER-CURTISS-WRIGHT ARPT: Closed ngts. (7-7) 626' twr Rdo Stn WTMJ/FM being erected atop Richfield Hill (1040' MSL), 12 mi NW (319° true). Temp lgtd during const. Unmrkd long guy wires attached to twr. (10-27)
CAMP McCOY ARPT: Emerg use only-not maintained. (10-6)
LA CROSSE INT FLD, SITE 23A, CG-TWIN CITIES: Snow fence erected 50' W of E bndry entire length of fld. E bndry lgts moved in to snow fence. Fld and rot. bcn site will be decomm about Jan 2, 1948. (12-15)
MADISON ARPT: Use rnwys only. Grass area 75' wide adj to rnwys rough, bal of grass areas unsafe and rough. Equip. on fld days. No svcg sunset to 0700. (12-17)
MADISON-MOREY ARPT: Use strips only. (10-28)
★MILWAUKEE-GENERAL MITCHEL FLD:-RADIO: Approach control procedures comm Dec 15, at CAA twr. FLD: Equip. on fld days. Right turn procedure rstd to locally based acft. All acft land according to tetrahedron unless otherwise instructed by twr. All pilots must register in Admin Bldg upon arvl and dptr. Position lgts must be turned on and operating between sunset and sunrise for all flgts to and from fld. Rdo rcvr rqrd for all locally based acft. New NNE/SSW 6700' strip closed. Army twr lctd W side fld closed and should not be confused with CAA twr lctd N side fld. (12-3)
OSHKOSH-WINNEBAGO CO. ARPT: Use rnwys only. All traffic left hand 600'. (11-17)
PLYMOUTH-CHAPLIN'S ARPK: Only E/W strip avail. (7-7)
SEXTONVILLE-RICHLAND FLYING SERVICE INC: N/S strip soft-avoid when wet. (10-9)
SOLON SPRINGS ARPT: CLOSED (snow). (12-2)
THREE LAKES ARPT: Const. (10-23)
TOMAH ARPT: N/S strip soft when wet. (10-8)
WAUKESHA CO. ARPT: Make first turns to left after landing and taxi on right side of rnwys to parking areas. (10-29)
WAUPUN ARPT, new: Soft after hvy rains. (10-14)
WYOMING: CASPER AFF: All rnwys unmrkd. (11-17)
CASPER-WARDWELL FLD: Use rnwys, taxi strips only, bal fld rough. 40' unlgtd pole erected at 30 million candle pwr ceilometer projector 1000' N of hangar. (4-8)
CHEYENNE ARPT: Equip. on fld days. Lgtd bldgs between E/W rnwy and taxi strip, 1000' from E end. (7-7)
FORT BRIDGER ARPT: Pwr line under const approx 0.3 mi SW of end NE/SW rnwy and approx 30' high, unlgtd. (11-3)
★ROCK SPRINGS MUN. ARPT-RADIO: CAA ILS middle mrkr now monitored. (12-19) FLD: Approach lgt lane operates whenever ceiling of 1000' or less and visibility of 3 mi or less prevails regardless of rnwy to be used and at other times on call. (9-22)
SHERIDAN CO. ARPT: N/S rnwy unsafe hvy acft. Taxi strips parallel all rnwys except N/S rnwy and terminate at ramp. Equip. on fld intermittently. Ctc Sheridan rdo for fld lgts. (12-12)

NEW OR REVISED AND DISCONTINUED DANGER AND CAUTION AREAS

CALIFORNIA: **CAMP PENDLETON: Artillery firing danger area in vcnty has been redefined as follows: Beginning at lat 33-24-23, long 117-15-15, thence to lat 33-18-00, long. 117-16-08, thence to lat 33-17-00, long 117-17-30, thence to lat 33-17-30, long. 117-21-30, thence to lat 33-27-14, long. 117-34-00, thence to lat 33-30-13, long. 117-29-13, thence to lat 33-24-23, long. 117-15-15. (12-4)
**CHOCOLATE MTN.: Aerial gunnery danger area has been revised to the following; Beginning at lat 33-32-40, long. 115-33-50, thence SE along a road to lat 33-25-50, long. 115-14-30, thence to lat 33-24-15, long. 115-17-00, thence SE and NE along a road to lat 33-22-50, long 115-09-58, thence to lat 33-07-30, long. 114-55-35, thence SW along a road to lat 33-00-00, long. 115-04-00, thence NW along the RR to lat 33-09-40, long. 115-19-30, thence to lat 33-12-55, long 115-24-00, thence to lat 33-28-30, long. 115-42-10, thence to lat 33-32-40, long. 115-33-50. (12-4)
**SALTON SEA: Circular dive bombing area centered at lat 33-20-07, long. 116-16-00 has been discontinued. (12-4)
CALIFORNIA: **SAN DIEGO: Circular caution area with a 5-mi radius for acrobatic training centered at lat 33-18-45, long. 117-05-00 has been relocated to lat 33-20-30, long 117-05-00. (12-4)
MAINE: **PENOBSCOT RIVER: Caution area estab. for acrobatic training above an altitude of 5000' day and night. The area is adjacent and east of Amber Airway #7 beginning at lat 44-44-30, long 68-53-30, thence to lat 44-39-30, long 68-50-00, thence southerly along the western shore of the Penobscot River and Penobscot Bay to the Atlantic Coastline, thence southwesterly along the coastline to lat 43-49-00, long 70-06-30, thence to lat 44-15-30, long 69-45-30, thence counterclockwise along the arc of a circle with a 5 mi radius, centered at lat 44-19-00, long 69-47-30 to lat 44-20-00, long 69-42-00, thence to lat 44-29-20, long 69-35-30, thence to lat 44-44-30, long 68-53-30.
MARYLAND: **WESTMINSTER: Caution area estab. for acrobatic training during daylight hours between 4000' and 15,000'. Area bounded as follows: beginning at town of Westminster thence southwesterly along hwy to lat 39-26-00, long. 77-06-00, thence W to lat 39-27-00, long. 77-24-00, thence northeasterly along railroad to Taneytown, Md., thence southeasterly along hwy to point of beginning.
MASSACHUSETTS: **WEST DENNIS: Bombing target caution area estab. approx. 2 mi S, within a circular area having a 2 mi radius centered at lat 41-38-18, long. 70-10-18. This area activated only during daylight hours up to and including 2000'.
WASHINGTON: **WHIDBEY ISLAND: Torpedo bombing danger area in vicinity has been redefined as follows: Beginning at lat. 48-13-00, long. 122-32-10, thence SE along the western shoreline of Camano Island to lat 48-07-40, long. 122-28-00, thence to lat. 48-06-00, long. 122-27-40, thence W to long. 122-34-00, thence NNW along the eastern shore of Whidbey Island to lat 48-13-00, long. 122-37-00, thence E to lat 48-13-00, long 122-32-00.



NOTAM CHARTS

THESE NOTAM CHARTS INDICATE:
- (a) NEW RADIO NAVIGATIONAL AIDS, BY AN N
- (b) NEW DANGER OR CAUTION AREAS
- (c) ABANDONED AIRPORTS, BY AN A [1]
- (d) DISCONTINUED RADIO NAVIGATIONAL AIDS, BY AN D [1]
- (e) AIRPORTS OR RADIO NAVIGATIONAL AIDS TEMPORARILY UNUSABLE OR USABLE ONLY WITH EXTREME CAUTION (OR AIDS AFFECTED BY A CHANGE OF FREQUENCY, IDENTIFICATION, QUADRANTS, OR RANGE COURSES.) BY AN E [2]

ONLY DANGER AND CAUTION AREAS AND E SYMBOLED FACILITIES, HOWEVER, ARE CUMULATIVE IN NATURE. FOR EXAMPLE, A NEW DANGER OR CAUTION AREA IS SPOTTED UNTIL IT IS INDICATED ON THE NEXT REVISION OF THE PERTINENT SECTIONAL CHART.

NOTAMS REFERRED TO BY THE E SYMBOL WILL BE FOUND IN EITHER THE "NOTICE TO AIRMEN" SECTION OR THE "REMARKS" COLUMN OF THE "DIRECTORY OF AIRPORTS" SECTION.

[1] NEW NAVIGATIONAL AIDS OR ABANDONED AIRPORTS AND AIDS ARE INDICATED IN ONLY ONE ISSUE.

[2] UNUSABLE AIRPORTS AND AIDS OR AIRPORTS AND AIDS USABLE ONLY WITH EXTREME CAUTION ARE INDICATED AS LONG AS THE HAZARDOUS CONDITIONS REMAIN IN EFFECT.

New editions of the charts listed below will be published in about one month, making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum for immediate requirements. As soon as the charts are available for distribution a second notice will appear in this publication.

Burlington	Des Moines	WAC 265	FC 225
Chicago	Milwaukee	WAC 307	FC 226

A new edition (or new chart) of the charts listed below which make former prints obsolete is now available for use. Former prints should be destroyed or stamped "OBSOLETE FOR USE IN AVIATION."

NEW EDITIONS

Aberdeen	November 24, 1947.	AL 67	November 10, 1947.	AL 344	November 10, 1947.
Casper	November 16, 1947.	AL 79	November 14, 1947.	AL 352	November 10, 1947.

WAC 218	November 15, 1947.	AL 109	November 10, 1947.	AL 375	November 10, 1947.
WAC 219	November 18, 1947.	AL 209	November 10, 1947.	AL 418	November 10, 1947.
WAC 268	November 7, 1947.	AL 211	November 10, 1947.	AL 494	November 10, 1947.
FC 178	November 7, 1947.	AL 218	November 14, 1947.	AL 500	November 7, 1947.
FC 183	November 9, 1947.	AL 237	November 10, 1947.	AL 555	November 10, 1947.
FC 216	October 30, 1947.	AL 282	November 14, 1947.	AL 574	November 10, 1947.
AL 39	November 10, 1947.	AL 289	November 14, 1947.	AL 582	November 14, 1947.
AL 42	November 14, 1947.	AL 324	November 14, 1947.		

CANCELLED CHARTS

AL 16, 82, 241, 379, 496, 512, 524, 537, 573, 627.

When ordering charts from the U. S. Coast and Geodetic Survey, correct remittances should accompany all orders. Sectional charts, price 25 cents each, should be ordered by name; World Air charts, 25 cents each, by number with prefix (WAC); Approach and Landing charts, 5 cents each, by number with the prefix (AL); Flight charts 25 cents each, by number with the prefix (FC); Direction Finding Charts, 40 cents each, by number and with the suffix as in 22 DF; Local Charts, 25 cents each, by name as Miami local; and Obstruction Plans, 40 cents each, by number with the prefix (OP). Consult the monthly Dates of Latest Prints of Instrument Approach and Landing Charts for further information concerning I A & L charts and Obstruction Plans.

AERONAUTICAL CHARTS

U. S. Coast and Geodetic Survey

Dates of Latest Prints

Dates in small type indicate minor changes which are not of sufficient importance to make the previous print obsolete. All charts carrying dates older than those shown in large type on this list are obsolete for use in flight.

GCA AVAILABLE: How and Where

GROUND CONTROLLED APPROACH (GCA) AVAILABLE TO CIVIL PILOTS AS WELL AS ARMY AND NAVY: All GCA facilities (Air Force, Navy, or CAA) are available to any plane in emergency. To secure GCA assistance, pilots should call the associated control tower for instructions.

In addition to the working frequencies listed below, Air Force and Navy GCA emergency VHF transmissions are made on 140.58 mcs. Simplex service on 3117.5 kcs will be provided at all Air Force and Navy installations to provide an alternate means of communications for scheduled air carrier aircraft. Army and Navy towers will relay GCA instructions on 230-400 kcs band to civil aircraft not equipped to receive VHF or HF.

A minimum of 30 minutes will generally be required to assemble a GCA crew and prepare the equipment for operation AFTER an alert has been received at those locations not providing continuous service.

CAA GCA UNITS

LOCATION	FREQUENCIES		REMARKS
	Transmits	Guards	
Chicago Arpt, Ill.	350 kcs; 109.5, 126.18 mcs.	3105, 4495, 6210, 3117.5 kcs; 126.18, 118.1, 118.7, 122.5 mcs.	Continuous

DIRECTORY OF AIRPORTS

LEGEND

CITY AND AIRPORT NAME

(When city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport name* (with A in Type column) - Owned or leased totally by U.S. Air Force

(N) " (with N in Type column) - Owned or leased totally by Navy

(CG) " (with CG in Type column) - Owned or leased totally by Coast Guard

(NG) " (with NG in Type column) - Owned or leased totally by National Guard

(A) Airport name + Open to civilians but owned or leased wholly or in part by U.S. Air Force, Air Reserve, U.S. Air Force servicing detachment or contract gas usually available.

(N) " - Open to civilians but owned or leased wholly or in part by Navy

(CG) " - Open to civilians but owned or leased wholly or in part by Coast Guard.

(NG) " - Open to civilians but owned or leased wholly or in part by Army or State Government for Air National Guard. Limited servicing and maintenance for transient military aircraft.

(P) " + Civil airport open to military aircraft. (See Note 2).

● " - C.A.A. Intermediate Field.

* Air Force and Navy fields are listed alphabetically by airport name followed by city name in parenthesis.

N.B. ALL AIRPORTS EXCEPT THOSE CITED WITH AN "A" or an "N" IN THE TYPE COLUMN ARE OPEN TO CIVIL FLIERS. AIRPORTS WITH NO PREFIX ARE EXCLUSIVELY CIVIL AIRPORTS.

TYPE

A	- U.S. Air Force	I	- Intermediate	NG	- National Guard
C	- Commercial	M	- Municipal		
CG	- Coast Guard	N	- Navy	P	- Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified.

CLASS

(See Level Runway and Strip Requirements)

Class	Strip Length	Runway (Paved) Length
B-1	Less than 1800'	Less than 1800'
1	1800-2699'	1800-2499'
2	2700-3699'	2500-3499'
3	3700-4699'	3500-4499'
4	4700-5699'	4500-5499'
5	5700-6699'	5500-6499'
6	6700-7699'	6500-7499'
7	7700-8699'	7500-8499'
8	8700-9699'	8500-9499'
9	9700' +	9500' +

RUNWAYS

In "longest" column is stated length of longest landing area in hundreds of feet.

"h" indicates landing area is hard-surfaced or paved.

"sy" indicates allway field.

No differentiation is made between runways and strips as far as number of landing areas in field is concerned. In other words, two hard-surfaced runways and two sod surfaced strips will be listed as four runways.

FACILITIES AND SERVICING

RADIO

R1: Control tower voice
R2: Range (or H facility) with voice
R3: Range (or H facility) and tower
R4: Range (or H facility), tower, and ILS

LIGHTS

L: Incomplete lighting, such as flood or strip lights, which are generally available only on prior request
L1: Beacon only
L2: Beacon and boundary
L3: Beacon, boundary, and obstruction
L4: Beacon, boundary, obstruction, and flood
L5: Beacon, boundary, obstruction, flood, and runway contact
(L5): Identical to L5 except that runway contact lights are high intensity
L6: Beacon, boundary, obstruction, flood, runway contact, and instrument approach
(L6): Identical to L6 except that instrument approach lights are high intensity

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

S1: Fuel
S2: Fuel, storage
(Any S combination in parenthesis indicates only part time or irregular attendant)
S3: Fuel, storage, minor aircraft repairs
S4: Fuel, storage, minor aircraft, and minor engine repairs
S5: Fuel, storage, major aircraft, and minor engine repairs
S6: Fuel, storage, major aircraft, and major engine repairs

REMARKS

(a) "91 oct." indicates fuel octanes available. "USAF", or "Navy", following octane indicates USAF or Navy contract fuel available.

(b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency.

(c) "Port. B-2 lights" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway, or strips.

(d) "TEMP INACT. NO FACS." indicates USAF airfields used either exclusively by the USAF or municipal airfields used jointly by the USAF and civil interests at which both the USAF and the civil interests are inactive. Such airfields will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the aircraft is assigned.

(e) "USAF TEMP INACT. CIVIL FACS." indicates municipal airfields used jointly by the USAF and civil interests at which the USAF facilities are inactive but civil facilities are available. Such fields may be used by military aircraft, however, only commercial service is available.

(f) OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines within at least a 15-1 glide angle are indicated.

(g) "Fld lights on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly the field lights, indicated for such a lighted field, (and in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.

NOTES

1. ⇐ Notam data revising previous issues.**
2. "(P)" in City and Airport Name column indicates: (1) those municipal airports improved with public funds and covered by an agreement between the municipality and the U.S. Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations, or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the Department of the Army.
3. "*Effingham, 10, L5-ID" in City and Airport Name column indicates that the airport is Effingham CAA Intermediate Field, Site 10 on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the C.A.A. are listed similarly except that there is no prefixed star.
4. AIRLINE STOP airport names are capitalized.
5. PRIVATE AIRPORTS are available for owner only, and not to be used by others except in emergency. Since no servicing is available for transients no "S" combination is ever assigned these fields.
6. "(Formerly Army)" or "(Formerly Navy)": These former Army and Navy fields are in the process of being disposed of by the War Assets Administration and Farm Credit Administration. Their type is difficult of determination currently and they should be used with caution as some, unable to be disposed of as airport property, are being diverted to agricultural purposes.

** At the bottom of the second column, under the heading of NEW AIRPORTS, will be found, out of alphabetical alignment, all the new airports tabulated after the type for that page had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to Commanding General, Air Transport Command, ATTN: Flight Operations Division, A-3. Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over 10 days should be forwarded to the same address for submittal to Chief of Staff, USAF, as required. Restrictions in Air National Guard Fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. That Bureau will forward approved restrictions to the above address for publishing. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration.

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of AF Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant with itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of AF Regulation 61-4, USAF aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated: AFRICA AND AZORES - Brookley Field, Ala., MacDill Field, Fla., Washington National Airport, D.C., or Westover Field, Mass. ALASKA - McChord Field, Wash., or Great Falls AFF, Mont. BERMUDA - Mitchel Field, N.Y., Brookley Field, Ala., MacDill Field, Fla., Washington National Airport, D.C., Westover Field, Mass., or Fairfield-Suisun AFF, Calif. CANADA - Great Falls AFF, Mont., Brookley Field, Ala., McChord Field, Wash., Washington National Airport, D.C., Selfridge Field, Mich., or Westover Field, Mass. CANAL ZONE, CENTRAL AMERICA, MEXICO AND SOUTH AMERICA - March Field, Calif., MacDill Field, Fla., Kelly Field, Tex., or Brookley Field, Ala. CARIBBEAN - Brookley Field, Ala., Kelly Field, Tex., or MacDill Field, Fla. ENGLAND, GREENLAND, ICELAND, AND NORTH IRELAND - Washington National Airport, D.C., or Westover Field, Mass. NOVA SCOTIA AND NEWFOUNDLAND - Washington National Airport, D.C., Westover Field, Mass., Selfridge Field, Mich., or Brookley Field, Ala. HAWAII - Fairfield-Suisun AFF, Calif. EUROPEAN THEATER - Brookley Field, Ala, MacDill Field, Fla., Washington National Airport, D.C., or Westover Field, Mass.

V.H.F. CHANNEL ASSIGNMENTS: Following are U.S. AF assignments:

CHANNEL	AF FREQUENCY	CHANNEL	AF FREQUENCY
A	116.1	H	134.10
B	126.18	U	108.3
C	137.88	V	108.7
D	140.58	W	109.1
G	137.70		

MINIMUM SAFE ALTITUDES ON AIRWAYS: Under USAF Regulation 60-16 and policy of USAF, minimum safe altitudes for flight along airways will be identical with those established by the Civil Aeronautics Administration. Action is being taken to amend pertinent USAF flight information publications to show these minimums.

IFR CLEARANCE MINIMUMS FOR CIVIL FIELDS: For IFR clearance to civil fields when minimum altitude over field is not shown on let-down chart contained in T.O. 08-15-3 or Pilots Handbook, USAF policy states that the "Regular - Day" minimum as shown in CAA Flight Information Manual will apply. Necessary action is being taken to amend all charts to show the proper minimums.

AIR FORCE FIELD DESIGNATIONS: To date, names and designations of Air Force fields have not been changed as a result of change of Army Air Forces to U.S. Air Force. Listings of fields as previously furnished such as "Alamogordo Army Air Field" will be used until further notice.

✓ CORRECTIONS FOR AND ADDITIONS TO U.S.A.F. T.O. 08-15-1: (1) Correct page 37, by showing code for Portland range identification as PD.

(2) Correct page 81, Pilot Procedures with Flight Service, Using USAF Military Flight Service Communications System (Plan 62) introductory sentence of paragraph 12, by changing as follows: "Collect long distance telephone calls made to Flight Service Centers will be accepted only on a station-to-station basis. The following list of telephone numbers will be used for contacting Flight Service Centers:" (Telephone numbers remain unchanged).

(3) Correct control tower listing for MacArthur Field, Islip, N.Y., by showing as a private tower. Frequency 278 kcs. Guards 3105 kcs. Operates 0900-1700 Mon. thru Fri. ILS on Channel V operates 0830-1700 Mon. thru Fri.

(4) Correct Chicago Orchard Airport, Ill., by showing an ILS with voice on Channel X, magnetic heading 138°.

(5) Correct page 81, by substituting the telephone number San Rafael 90 for San Rafael LD 20 for Hamilton Flight Service Center, Calif.

✓ CORRECTIONS FOR AND ADDITIONS TO U.S.A.F. T.O. 08-15-2: (1) Correct page 32, AN/CPN-6 (YM) Beacons (X-Band) Domestic by showing the following facility in operation: Location: Glynco, Ga.; Geographical position: 31-14-26 N, 81-28-13 W; Code: 2-2-1; Operating Agency: USN.

(2) Correct page 32, by showing Quonset Point, R I., with a code of 1-1.

✓ CORRECTION FOR U.S.A.F. T.O. 08-15-3: Correct page 126, Toledo, Ohio chart, by showing the "A" quadrantsas "N" and the "N" quadrants as "A".

✓ CORRECTION FOR PILOTS HANDBOOK, NORTHEAST: Correct airport chart, November 10, 1947, for Dow Field, by showing the E/W runway as available. (West 1700' is temporarily closed, but remainder of runway is available).

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators No. 9 July 29, 1946, Hydrographic Office information concerning naval and marine corps air stations and facilities, including changes in field facilities, operation rules, air/ground communications facilities, instrument approach procedures and navigational aids, should be directed to: The Division of Air Navigation, Hydrographic Office, Washington 25, D.C., for transmittal to the Civil Aeronautics Administration.

In accordance with Aviation Circular Letter No. 96-46 of June 13, 1946, approval for the closing of any naval or marine corps air station or facility to transient military aircraft for a period in excess of 10 days must be obtained from the Chief of Naval Operations. Also, approval is to be obtained from the Chief of Naval Operations before relocation or modification of any aid to air navigation, such as reorientation of radio ranges.

V.H.F. CHANNEL ASSIGNMENTS: Following are Navy assignments:

CHANNEL	NAVY FREQUENCY	CHANNEL	NAVY FREQUENCY
1	116.1	6	134.64
2	142.56	7	143.64

✓ Indicates new or revised Special Notices

CHANNEL	NAVY FREQUENCY	CHANNEL	NAVY FREQUENCY
3	126.18	8	142.02
4	128.70	9	142.74
5	143.28	GUARD	140.58

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout, servicing, lighting or permanent obstructions, of existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction. Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids, however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood, or snow, a runway closed because of construction, or the erection of a pole line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public and the data may be checked from an engineering standpoint & for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airways Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide.

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA District Airport Engineer for coordination before they are included in the Airman's Guide.

DIRECTORY OF AIRPORT NOTAMS: Because of space limitations, the airport directory perforce serves as a notam supplement. Notam data revising previous directory issues are indicated by prefixed arrows. The only airport data (other than temporary conditions) carried in the Notices to Airmen section are coordinates (latitude and longitude).

AIR RESCUE SERVICE: Headquarters, Air Rescue Service, Air Transport Command, U.S.A.F., has issued the following memorandum to all civil pilots: "Air Rescue Service is one of the services of the Air Transport Command, U.S. Air Force. Although it is military, its aid is available to you twenty-four hours per day in all parts of the United States. Its equipment is such that once it is alerted, besides conducting a search for you, it can furnish you aid by parachuting doctors to your assistance, if immediate medical aid is needed, and by employing specially equipped ground parties which can traverse any terrain to reach you.

"With your help, this specialized equipment and personnel can more effectively come to your aid. Too often when you are reported missing, valuable time is lost in searching for you and bringing aid to you because Air Rescue Service has no idea of your whereabouts, or there are too many probably areas in which to conduct the search. Thus, you are deprived of expert rescue facilities during the critical period following your misfortune. The simplest way to overcome this biggest disadvantage to you is to file a flight plan with Civil Aeronautics Administration, regardless of the weather along your proposed flight path. If CAA facilities are not available, leave a flight plan with a responsible party at the point of departure. This flight plan should include your name, aircraft type and number, your route, your destination, and when you propose to land there (See part 60, Civil Air Regulations). Two things to remember about a flight plan: Once you file it, follow it! When you land, close it with the nearest CAA Communications Station! If you do these things, there is less chance of your becoming an incident, either "actual" or "false". By failing to close your flight plan, you will become a false incident and may thus deprive someone who really needs assistance from getting it.

In order to become more fully informed about the work of Air Rescue Service and how it can help you in distress, you are invited to visit the nearest Air Rescue Service unit and get acquainted."

CIVIL USAGE OF MILITARY FIELDS: USAF and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

REISSUANCE OF EXPIRED PILOTS CERTIFICATES: 20.550 Reissuance. Any person who on June 30, 1947, held a valid private or commercial certificate and who failed to exchange such certificate in accordance with Section 20.55 of the Civil Air Regulations, may, notwithstanding such failure and without other showing, obtain a pilot certificate with appropriate ratings upon application to the Administrator.

PERSONAL POSSESSION OF PILOT CERTIFICATE: No person shall pilot a civil aircraft within the U.S., unless he holds a valid pilot certificate with appropriate ratings issued by the Administrator or an appropriate and valid foreign pilot certificate. Such certificate shall be in the personal possession of the pilot at all times while piloting aircraft and shall be presented for examination to any inspector of the Administration or state or local law enforcement officer upon the request of such inspector or enforcement officer.

DUPLICATE AIRMAN CERTIFICATE AND RATING RECORD FEE: The fee for duplication of an airman certificate and rating record which has been lost, mutilated or destroyed is now one dollar. All airmen should be guided accordingly when making remittance for duplicates. The notation on the reverse side of the airman certificate and rating record form stipulating a fee other than one dollar for both certificate and rating record is to be disregarded. In future reprints, of the form, the notation will be revised to indicate one dollar for duplication. Duplicate medical certificates are issued only at the discretion of the examining physician. Requests for such duplicate certificates, should, therefore, be made directly to the physician who performed the examination.

RADIO TELEPHONE-OPERATION AUTHORIZATION: This is the simple way in which an authorization to operate a radio telephone transmitter in an aircraft is obtained: the applicant appears in any of the Federal Communications Commission field offices, or before any CAA flight examiner of the CAA, who has been designated by the FCC to issue the permits, proves he is a U.S. Citizen, that he has need of such authorization, and that he understands the few simple rules and regulations. He is given a card granting the authorization then and there.

FCC offices are listed under U. S. Government in phone books, and there are some 30 of them throughout the country. Mostly, they are in downtown offices. There are more than 1,000 CAA designated flight examiners. Mostly they are located at airports.

The "examination", if it may be so described, consists of a few questions establishing the ability of the applicant to transmit and understand spoken messages in English, and to understand the simple rules governing the use of such equipment. He is also given simple, printed instructions for its use.

NOTICE TO ALL FLYING PERSONNEL: Because of the increase in aircraft operations, both civil and military, in recent months, the number of complaints regarding airplane noise nuisance has reached such proportions that the advancement of aviation and development of new airports are in danger of being severely retarded.

To reduce the number of such complaints, it is requested that the following practices, be put into effect by all fliers:

1. Discontinue all unnecessary low flying.
2. When weather and traffic volume permit, increase altitudes of all traffic patterns that require flight over inhabited areas.
3. Re-route channels of approach and departure to avoid residential and business districts whenever possible.
4. If the airport is located near inhabited areas, reduce power and increase pitch of propellers as quickly as possible during take-off so as to keep engine and propeller noises at a minimum.
5. Keep rpm's set at a minimum required operational setting when low flying over populated areas is necessary.

SEAPLANE OPERATIONS: Because of the possibility of local ordinances or restrictions prohibiting seaplane operations in resort or congested areas, the Administrator has issued the following advice to seaplane operators:

"1. Take off as far out from the shore as possible.
2. Cut the takeoff run as short as safety permits.
3. Fly high enough to avoid criticism from residents below, or arrange the flight plan so that you pass over as few houses as possible.
4. Avoid unnecessary 'gunning' or racing of the engine.
5. Explain carefully to those who complain what you are doing to make your airplane a good neighbor.

"In the CAA-Federal-Aid Airport program, we are promoting the use of seaplanes by assisting communities in establishing inexpensive docking and servicing facilities. In view of the high utility value of the seaplane or amphibian, we believe this to be a definite step in the advancement of personal flying in general. Hence, if we are to find acceptance of such facilities, it is up to those pilots who now operate seaplanes to assist us to the utmost by safe and considerate operation of their aircraft."

N.B. The Administrator's admonition was occasioned by numerous complaints received from lake-side residents and vacationists.

SEAPLANE BASE DIRECTORY: A new Seaplane Base Directory dated Dec. 1, 1947, has gone to press. It will be mailed to all seaplane owners and bases. Owners or base operators who are not already on the mailing list, may secure it upon request to the Office of Aviation Information, Attention: A-258, C.A.A., Department of Commerce, Washington, 25, D. C.

CONTROL TOWER TUNING PRECAUTION: On some aircraft receivers, the channel of 278 kcs is identified as "tower", on the tuning control nameplates. This is not always correct as many towers transmit on frequencies other than 278 kcs. Reports indicate that some confusion is being created by the failure of pilots to tune their receiver to the tower transmitting frequency when such frequency is other than 278 kcs. It is suggested that pilots use care and make certain that they are tuned to the transmitting frequency of the tower with which they desire to communicate.

✓ USE OF AIRPORT UTILITY FREQUENCIES - 121.7 AND 121.9 MCS: The airport ground control frequencies of 121.7 and 121.9 mcs are provided to eliminate the frequency congestion caused by numerous radio contacts between the tower and taxiing aircraft and the tower and airport utility vehicles, thus providing a clear channel in the 118 mcs band for arriving and departing aircraft. Normally, landing aircraft remain tuned to the 118 mcs band frequency unless otherwise instructed by tower.

The ground control frequencies are used for the issuance of taxi information, ATC clearances and any other contacts between the tower and aircraft or vehicles operating on the airport.

V.H.F. IFR FLIGHTS: Until further notice, Air Traffic Control will be exercised on the assumption that aircraft are utilizing intermediate frequency radio ranges. If a pilot desires to conduct IFR flight using VHF ranges over all or a portion of the route, his flight plan should so indicate. Further, flights should not be conducted on civil airways in IFR weather using VHF ranges unless the A.T.C. clearances so authorize.

✓ PRIVATE FLIER VHF FREQUENCIES: CAA Communications Stations and Towers guard the private flier frequencies of 122 1 mcs for transmission to CAA Communications Stations and 122.5 mcs for transmission to CAA operated towers.

CAA Communications Stations normally reply to itinerant aircraft on the voice feature of the range, low frequency or VHF, whichever is applicable. Replies are made on 111.1 mcs if VHF reply has been requested on other than range frequency. CAA airport control towers will reply to itinerant aircrait on one of the frequencies 118.3, 118.5, 118.7, or 118.9 mcs, in addition to towers' low frequencies.

RADIOTELEPHONE COMMUNICATIONS: The word ROGER in radiotelephone communications means "I have received all of your last transmission", and its use in any other sense by CAA stations and towers is not authorized. In order to avoid confusion it is suggested that pilots engaging in air-ground contacts also limit the use of ROGER to acknowledgment of transmissions.

Pilots enroute are requested to avoid, if possible, calling airway communications stations at or about 15 and 45 minutes past the hour (which are the scheduled broadcast times) to request weather information, as such calls may delay starting of scheduled broadcasts and cause inconvenience to other persons who are dependent on the broadcasts for weather reports.

✓ VISUAL-AURAL RANGE (VAR) MONITORING: Only visual courses of VAR facilities are monitored continuously.

TWO-WAY RADIO FAILURE PROCEDURES: In the event of failure of two-way radio communications between an aircraft and the ground, the pilot will observe one of the following procedures: (a) If operating under VFR conditions, proceed under VFR and land as soon as practicable, or

(b) Proceed according to the latest air traffic clearance.

If the pilot proceeds according to the latest traffic clearance but has not received and acknowledged a clearance to the tower and if other instructions to the contrary are not received, he shall be expected to observe the following and control will be effected accordingly: (1) If the pilot has received and acknowledged a clearance to the destination airport or the radio facility serving that point, he shall continue flight at the altitude(s) last assigned by Air Traffic Control, or the minimum instrument altitude, whichever is the higher, to the radio facility serving the destination airport.

(2) If the pilot has received and acknowledged a clearance to a point other than the destination airport or the radio facility serving the destination airport, he shall continue flight at the altitude(s) last assigned by Air Traffic Control or the minimum instrument altitude, whichever is the higher, to the radio facility serving the destination airport.

(3) If holding instructions have been received, the pilot shall comply with these instructions until such time as it will be necessary to continue flight so as to arrive at the radio facility serving the destination airport at the expected approach time last received and acknowledged, maintaining the last assigned altitude or the minimum instrument altitude, whichever is the higher.

(4) If holding instructions have been received, but no expected approach time has been received, the pilot shall comply with these instructions until the time Air Traffic Control has specified that further clearance may be expected. He shall then continue, maintaining the last assigned altitude or the minimum instrument altitude, whichever is the higher.

NOTE: The minimum instrument altitude referred to is the minimum established for that portion of the route over which the operation is conducted, regardless of the direction of flight.

Approach: Descent from the altitude maintained to the radio facility serving the destination airport shall be made on the final approach course and shall start at the expected approach time last received. If no expected approach time was received, descent shall be started at the last estimated arrival time specified by the pilot, or as soon as possible thereafter. A full standard instrument approach should be executed unless a VFR approach

can be made.

If a clearance to the tower at the airport of intended landing has been received and acknowledged, the pilot shall be expected to comply with any special instructions contained in the clearance and make normal descent for landing.

NOTE: Air Traffic Control may issue appropriate instructions to be broadcast "blind" over air carrier radio facilities (for air carrier aircraft), and over suitable radio range facilities. Instructions must not be broadcast unless Air Traffic Control authorizes such broadcast.

VFR (Formerly CFR) FLIGHT PLANS, AND ARRIVAL REPORTS: VFR flight plans may be filed with any CAA airways communication station or air route traffic control center. VFR flight plans are not transmitted. One hour after E.T.A., if no notice of arrival is received at the station at which the flight plan was filed, queries are sent out over CAA communication systems. If the arrival report is not received within three hours, search and rescue operations are initiated. Inasmuch as the Government may be put to considerable expense in determining the location of aircraft when an arrival report is not filed, it is vitally necessary that all pilots using this service make certain that notice of arrival is filed with the CAA communications station at the termination of the flight

To reduce radio congestion, pilots should file VFR flight plans, when required, in person or by telephoning the airways communications station or air route traffic control center. CAA control towers have discontinued accepting VFR flight plans for transmission and will not normally transmit arrival reports except upon the specific request of the pilot. Whenever practicable, however, it is desired that arrival reports be filed in the same manner as flight plans. (This corrects Chapter IX, page 114, of the July 1, 1947 Flight Information Manual).

✓ FILING ROUTE OF FLIGHT IN IFR FLIGHT PLANS. It is important that no misunderstanding exist between the pilot and Air Traffic Control concerning the proposed route of flight specified in a flight plan. Prior to filing a flight plan, the Coast and Geodetic Survey Radio Facility Charts should be consulted and an accurate description of the route of flight determined.

If the entire flight is to be conducted along civil airways, the route may be described by indicating the color abbreviation and number of the airway(s) to be flown. Civil airways which cross or merge for short distances with the airway being flown should not be indicated.

Example: "Departing Robertson Field, St. Louis, cruising 7,000' via Amber Airway 5, Blue Airway 6, and Red Airway 12, to Municipal Airport, Chicago".

The route of flight along the civil airway may also be described by specifying each designated reporting point along the airway, rather than the airway color and number. If this method is used, however, each designated reporting point (depicted as green dots on Coast and Geodetic Survey Radio Facility Charts) must be specified, plus the identification of sufficient on-request reporting points (red dots) to definitely indicate the route.

Example: "Departing Robertson Field, St. Louis, Missouri, cruising 7,000' via Springfield, Peoria, and Moline, to Municipal Airport, Chicago".

The use of the airway color and number is particularly applicable to flights over extended distances, while the use of the designated reporting point method is more applicable to short distance flights or to definitely indicate the route in congested areas where alternate routing is available. A combination of both methods should be used, when necessary.

Example: "Departing Robertson Field, St. Louis, cruising 7000' via Amber Airway 5, Blue Airway 6, Red Airway 12, Yorkville Intersection, Joliet Intersection, and Lansing Intersection, to Municipal Airport, Chicago".

If a flight is to be conducted on a direct off-airway route which may cross civil airways or coincide with civil airways for only a short distance, the route of flight should be indicated by use of the identification of reporting points over which the flight will pass. On long distance flights, at least one reporting point in each air route traffic control flight advisory area through which the flight will pass must be indicated. In order that there will be no misunderstanding that the pilot proposes to conduct flight direct between the two reporting points, the word "DIRECT" must be specified between each of the reporting points.

Example: "Departing Scott Field, cruising 5000', direct to Kirksville, direct to Des Moines Municipal Airport".

The on-airway method and the direct operation method may be combined to describe the route of flight when only a portion of the route will be flown via the airways. It is important to remember, however, that the word "DIRECT" must at all times be specified between the reporting points between which direct operation is proposed. Failure to specify the word "DIRECT" would indicate that flight is proposed via the airways between the reporting points specified.

Example: "Departing Scott Field, cruising 7000' direct to Crystal City Intersection, via Amber Airway 5 to Advance, direct to Walnut Ridge Army Air Field".

Air Traffic Control normally attempts to issue a traffic clearance specifying the altitude and route proposed in the flight plan. However, due to traffic conditions, it is frequently necessary that Air Traffic Control specify an altitude or route different from that requested by the pilot. It is important that pilots pay particular attention to the altitude and route specified in the air traffic clearance and not assume that the route and altitude is the same as that requested in the flight plan. If any doubt exists, the pilot should verify the clearance with Air Traffic Control.

CLEARANCE PROCEDURES FOR IFR FLIGHT: Effective October 8, 1947, and concurrent with effective date of CAR 60 as revised, new clearance procedures for IFR flights are being used in the control of Air Traffic.

1. No Air Traffic Control clearance will be issued for flights operated in accordance with visual flight rules except for flights within a control zone as prescribed in C.A.R. 60.2.

2. Flight plans specifying flight in accordance with VFR for a portion of a flight will be accepted at the point of departure. If VFR flight is proposed for the first portion of the flight, the pilot will be advised to request IFR clearance from the appropriate communications station along the route of flight. The pilot must remain in VFR weather conditions until the clearance is received.

3. When a flight plan indicates IFR flight for the first portion of flight and VFR for the latter portion, the aircraft will be cleared to the point at which VFR flight is planned, inasmuch as no clearance is necessary for VFR flight. The pilot is expected to continue his flight without further contact with Air Traffic Control.

4. Standard separation from other IFR traffic will be provided aircraft on IFR flight plans, except (a) when "at least 500' on top" has been assigned or authorized by ATC in lieu of a cruising altitude if frequent pilot reports indicate a generally unlimited ceiling on top and a forward visibility of at least 3 miles. (b) when VFR operation is specified by ATC during climb to cruising altitude, descent from cruising altitude, or change of altitude enroute. If the flight cannot be conducted under VFR conditions, when such clearance is received, it is the pilot's responsibility to secure an amended clearance before proceeding IFR.

5. Pilots may cancel IFR flight plans at any time by so notifying ATC provided they are operating in VFR weather conditions when they take such action. Where conditions indicate that the remainder of a flight can be conducted in accordance with VFR, a pilot should avail himself of this procedure to lift the restrictions on his own flight and to simplify the general traffic situation. Caution should be exercised, however, that flight plans not be cancelled when IFR conditions are expected in some subsequent portion of a flight. When a flight plan is cancelled and a new instrument clearance is later requested, priority of handling will be based upon the time of filing the new flight plan.

6. When a flight plan is filed indicating altitude change beyond the control area of the center controlling the point of departure, the flight will be cleared to destination with instructions to maintain the altitude at which the aircraft enters the next control area. The pilot should request further altitude changes enroute. Better service can be given the pilot if an altitude change is requested at the time the change is desired.

This procedure cancels and supersedes the Altitude/VFR procedure now contained in the Flight Information Manual.

AIRPORT LIGHT SIGNALS: Effective October 8, 1947, the following special light signals are prescribed by the Administrator for use at airports in accordance with C.A.R. 60.108(e): (1) A white rotating airport beacon lighted during daylight hours, or flashing lights on a tetrahedron during the hours of darkness, shall mean the official ground visibility at the airport is less than three miles, and that if the airport is within an airport control

zone, a traffic clearance is required for landing, takeoff or flight in the traffic pattern. (2) A flashing amber light at an airport shall mean clockwise flow of traffic is in effect and that right turns shall be made unless otherwise authorized by Air Traffic Control. These special light signals are in addition to those prescribed in the CAA Flight Information Manual for use with a directed portable traffic signal light, and will be included in the next edition.

✓ AERONAUTICAL CHART AND PUBLICATION CORRECTIONS: (1) Correct mileage on Coast and Geodetic Survey Radio Facility Chart, No. 13, between Hartford, Conn., and New Hackensack, N.Y., to 66.

(2) Correct Norfolk Sectional Aeronautical Chart, dated Oct. 29, 1947, by showing VHF range at Elizabeth City, N.C. transmitting on 108.3 mcs instead of 118.3 mcs.

(3) Correct Chicago Sectional Aeronautical Chart, dated Dec. 16, 1947, by changing Ft. Wayne, Ind., Baer Field Tower frequency to 278 kcs instead of 603 kcs.

(4) Correct Yellowstone Park Sectional Aeronautical Chart, dated Nov. 4, 1947, by showing the E course bearing of Livingston, Mont. radio range as 67° instead of 47°.

AIRPORT TRAFFIC CONTROL PROCEDURES: (a) Planes with 2-way radio should establish communication with control tower when 15 miles from the airport of destination and before taxiing or taking off.

(b) Planes without receivers, when approaching tower-controlled fields, and before taxiing and taking off, should be on the alert for and be guided by light gun signals (See AFF Regulation 100-4, dated March 4, 1944, and C.A.R. Digest or Manual 60).

(c) Flashing tetrahedron lights, as well as the daylight operation of rotating beacons, indicate that the ground visibility is less than 3 miles and a traffic clearance is necessary to enter the traffic pattern of airports within the control zone.

FOREIGN SPECIAL NOTICES

INTERNATIONAL NOTAMS The only source of international notams is the CAA Overseas-Foreign Aeronautical Communications Stations at the following locations: New York, N.Y.; Miami, Fla.; New Orleans, La.; Balboa, Canal Zone; San Francisco, Calif.; Seattle, Wash.; Honolulu, Hawaii, Anchorage, Alaska.

FOREIGN ENTRY PROCEDURES, AIRPORTS OF ENTRY, CUSTOMS REPORTS, CIVIL AIRCRAFT CLEARANCE FOR FOREIGN COUNTRIES: These procedures and regulations were all incorporated into the Flight Information Manual, Vol. 2, No. 1, dated July 1, 1947. Only amendments to the data contained in the Manual will hereafter be carried in the Airman's Guide.

LONDON, ENGLAND: Pilots entering or operating within this area should be familiar with all notams available at the New York International Notam Office.

N.B. The British Government has reported several violations of local air traffic rules. Disciplinary action will be taken on future violations.

AIRPORT AND RADIO NOTICES

LEGEND

** - New or revised airport, danger area, or miscellaneous data to be inscribed on charts or added to records.

★ - New or revised radio data to be inscribed on charts or added to records.

ALABAMA: ATHENS ARPT: E/W strip soft in wet weather. (10-14)

BIRMINGHAM—RADIO: VHF omni-directional rng without voice operates on test basis, fac unmonitored, and subject to interruptions; not to be used for navigational purposes. Freq. 116.3 mcs, ident. "BH"

BIRMINGHAM ARPT: Closed to civil acft not equipped with operating rcvr. Landing on sod areas approved by twr in dry weather, unsafe in wet weather. Ctn ngts or under IFR plant S of fld has long taxi and parking strips resembling rnwys. (11-6)

BRIDGEPORT-ALA-TENN-GA ARPT: Ctn when wet (10-14)

BROOKLEY FLD (MOBILE)-Soft-use rnwys, taxi strips only. (10-28)

CENTRE ARPT: NNW/SSE strip closed. N side E/W strip rough. (10-14)

CRAIG FLD (SELMA): Bndry lgts inop. Fuel avail. on off. bus. only. (10-27)

FOLEY-OAK ARPT: W end E/W, N end N/S strips soft in wet weather. (10-14)

JASPER-WALKER CO. ARPT: Land inside of bndry mrkrs. Avoid new landing strip now being graded. (10-14)

LIVINGSTON-JACKSON FLD: Rolling and slightly rough. Soft spots along N side at SW end. (10-14)

MAXWELL FLD (MONTGOMERY): At ngt or under IFR conditions large depot 1 mi S looks like arpt and lgts give impression of parallel rnwys. (10-17)

MOBILE-RADIO: Auto. rng monitor. sys inop. (12-30)

MOBILE-BATES FLD: N/S rnwy lgts inop. (8-26)

MONROEVILLE-LEGION FLD: Do not confuse golf course fairways with landing strips. (10-14)

ALABAMA: MONTGOMERY-RADIO: VHF omni-directional rng comm on test basis, unmonitored, unattended and subject to interruptions, not to be used for navigational purposes. Ident. "TDN", freq. 112.1 mcs (12-8)
MUSCLE SHOALS ARPT: Equip. on fld intermittently days except Sat. and Sun. Trucks flagged. (12-22)
TALLADEGA ARPT: N 700' N/S strip soft in wet weather. (10-14)
WINFIELD ARPT: S end N/S strip soft in wet weather. (10-14)
ARIZONA: DAVIS MONTHAN FLD (TUCSON): E fld closed-acft parked on rnwys. Blinding ceilometer W end fld between ends of NW/SE, E/W rnwys. Obst lgt inop on 75' pole SE control twr. Former taxi strips 12R and 30L are now open as Rnwys 12R and 30L to be used by lgt acft and rstd to day opers only. (12-30)
GILA BEND AFF: Maj obsts S fld lgtd. (7-21)
LITCHFIELD PARK NAF: No landings permitted later than one-half hr before sunset without prior approval from C.O. No ngt opers. (10-3)
LUKE FLD (PHOENIX): Traffic direction indicator on 2nd hangar from N not operating. (10-15)
MESA-OASIS ARPT: W end E/W, SW end NE/SW strips unsafe for a distance of 500' (ditches across ends) (7-24)
PHOENIX-RADIO: Visual courses of VHF rng not monitored. (8-18). Freq. 108.3 mcs, ident. "PH"
PHOENIX: Inst training on Phoenix Rng between 5500 and 9500'.
PHOENIX-SKY HARBOR ARPT-RADIO: CAA ILS operating on experimental basis and unmonitored. (12-27) FLD: Local ngt flying acft must be equipped with 2-way rdo. Equip. near Rnwy 12. Installation of ILS in progress off end of Rnwy 12. Installation of ILS in progress off end of Rnwys 26 and 8. (10-3)
WILLCOX-COCHISE COUNTY ARPT: Tetrahedron unreliable. Cattle on fld. (12-8)
WILLIAMS FLD (CHANDLER)-RADIO: USAF rng unreliable and to be used for training only. (12-3) FLD: Use rnwys only. Exten rnwy repairs being conducted. All acft use ctn from 1200M Fri. until 0800M Mon each week. No fuel avail. trans acft. (8-20)
WINSLOW-RADIO: Visual-aural rng stn operates unattended or without means of remote monitor. Freq. 108.7 mcs, ident. "WO".
WINSLOW ARPT: Acft with rdo ctc Winslow Rdo for lgts. Non-rdo equipped acft circle arpt and flash navigation lgts when rnwy lgts rqrd. Neon approach lgts inop. (9-29)
YUMA-YUMA CO. ARPT: Bndry lgts not avail. Tetrahedron lgts only on req. Bcn-inop (12-29)
ARKANSAS: BATESVILLE ARPT: N/S strip and E end E/W strip under const-unusable. Taxiway to fuel pump hazardous. (10-17)
FORT SMITH ARPT: W end NW/SE, N end NE/SW rnwys closed. (12-7)
HOT SPRINGS-MEMORIAL ARPT: Ctn in traffic. Inten student training. No twr control Use rnwys only. (10-23)
LUXORA INT, SITE 39, NO-LS: 30' unlgtd p-line being erected S end N/S rnwy. (9-27)
SEARCY MUN ARPT: Under const. Use with extreme ctn. (10-3)
WALNUT RIDGE AFF: Acft parked all areas fld and ramp. Use rnwys only. Equip. on fld. Closed 1730 to 0800. NE/SW rnwy closed. (10-23)
CALIFORNIA: ALAMEDA NAS: Maintain high approach on Rnwys 26L and 21. Hvy acft: prkd these areas. 175' unlgtd cranes 2000' from NE corner fld-ctn ngts and during low visibility. Equip. adj to and on rnwys. Fld on positive control. (10-3)
★ARCATA-RADIO: Rng now maintained by Transocean Air Lines. Rng figt-checked Dec. 29, courses correctly aligned.
ARCATA-REDWOOD FLD: Closed to acft without 2-way rdo. Use surfaced areas only. (10-3)
BAKERSFIELD-KERN CO. ARPT-RADIO: CAA ILS inop temp, will be recomm with voice and ident. "BD". Middle mrkr will be decomm soon for installation of compass lctr and will be recomm at a later date. (11-19). (Dates of these changes being investigated). FLD: Unlgtd 92' pwr line 1/2 mi N of bndry. (10-30)
BECKWOURTH-PLUMAS CO. ARPT: Use rnwys, taxi strips only-turf rough. (6-2)
BLYTHE AFF: Obst lgts atop control twr inop. (2-28)
BLYTHE-BRESSON ARPK: Soft spot W side N/S strip. (10-3)
BOCA, BCN SITE 17A, SF-SL: Bcn inop. (9-22)

NOTAM CHARTS

AERONAUTICAL CHARTS OF THE U. S. COAST AND GEODETIC SURVEY

New editions of the charts listed below will be published in about one month, making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum for immediate requirements. As soon as the charts are available for distribution a second notice will appear in this publication.

Aroostook	WAC 262	WAC 308	WAC 186
Cleveland	WAC 263	Chicago local	
Lewiston	WAC 264	FC 16	

A new edition (or new chart) of the charts listed below which make former prints obsolete is now available for use. Former prints should be destroyed or stamped "OBSOLETE FOR USE IN AVIATION."

NEW EDITIONS

Dubuque	December 4, 1947.	AL 120	November 18, 1947.	AL 261	November 28, 1947.
Fargo	November 22, 1947.	AL 121	November 25, 1947.	AL 267	December 2, 1947.
Lake of the Woods	December 7, 1947.	AL 125	November 18, 1947.	AL 268	December 2, 1947.
		AL 128	November 18, 1947	AL 283	November 25, 1947.
Minot	November 27, 1947.	AL 130	November 28, 1947.	AL 302	November 18, 1947.
Sioux City	December 5, 1947.	AL 133	November 18, 1947.	AL 341	November 18, 1947.

NEW CHARTS

Cleveland local	Cleveland, Ohio		November 26, 1947.
OP 79	Chattanooga, Tennessee	Chattanooga Airport (Lovell Field)	October, 1947.
OP 259	Miles City, Montana	Miles City Airport	December, 1947.
OP 263	St. Paul, Minnesota	St. Paul Airport	October, 1947.
OP 351	Rochester, New York	Rochester Airport	December, 1947.
OP 388	Sheridan, Wyoming	Sheridan Airport	November, 1947.
OP 465	Yakima, Washington	Yakima County Airport	November, 1947.

When ordering charts from the U. S. Coast and Geodetic Survey, correct remittances should accompany all orders. Sectional charts, price 25 cents each, should be ordered by name; World Air charts, 25 cents each, by number with prefix (WAC); Approach and Landing charts, 5 cents each, by number with the prefix (AL); Flight charts 25 cents each, by number with the prefix (FC); Direction Finding Charts, 40 cents each, by number and with the suffix as in 22 DF; Local Charts, 25 cents each, by name as Miami local; and Obstruction Plans, 40 cents each, by number with the prefix (OP). Consult the monthly Dates of Latest Prints of Instrument Approach and Landing Charts for further information concerning I A & L charts and Obstruction Plans.

AERONAUTICAL CHARTS

U. S. Coast and Geodetic Survey

Dates of Latest Prints

Dates in small type indicate minor changes which are not of sufficient importance to make the previous print obsolete. All charts carrying dates older than those shown in large type on this list are obsolete for use in flight.

GCA AVAIL'ABLE: How and Where

GROUND CONTROLLED APPROACH (GCA) AVAILABLE TO CIVIL PILOTS AS WELL AS ARMY AND NAVY: All GCA facilities (Air Force, Navy, or CAA) are available to any plane in emergency. To secure GCA assistance, pilots should call the associated control tower for instructions.

In addition to the working frequencies listed below, Air Force and Navy GCA emergency VHF transmissions are made on 140.58 mcs. Simplex service on 3117.5 kcs will be provided at all Air Force and Navy installations to provide an alternate means of communications for scheduled air carrier aircraft. Army and Navy towers will relay GCA instructions on 200-400 kcs band to civil aircraft not equipped to receive VHF or HF.

A minimum of 30 minutes will generally be required to assemble a GCA crew and prepare the equipment for operation AFTER an alert has been received at those locations not providing continuous service.

DIRECTORY OF AIRPORTS

LEGEND

CITY AND AIRPORT NAME

(When city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport name* (with A in Type column) - Owned or leased totally by U.S. Air Force

(N) " (with N in Type column) - Owned or leased totally by Navy

(CG) " (with CG in Type column) - Owned or leased totally by Coast Guard

(NG) " (with NG in Type column) - Owned or leased totally by National Guard

(A) Airport name - Open to civilians but owned or leased wholly or in part by U.S. Air Force, Air Reserve, U.S. Air Force servicing detachment or contract gas usually available.

(N) " - Open to civilians but owned or leased wholly or in part by Navy

(CG) " - Open to civilians but owned or leased wholly or in part by Coast Guard.

(NG) " - Open to civilians but owned or leased wholly or in part by Army or State Government for Air National Guard. Limited servicing and maintenance for transient military aircraft.

" - Civil airport open to military aircraft. (See Note 2).

" - C.A.A. Intermediate Field.

* Air Force and Navy fields are listed alphabetically by airport name followed by city name in parenthesis.

N.B. ALL AIRPORTS EXCEPT THOSE CITED WITH AN "A" or an "N" IN THE TYPE COLUMN ARE OPEN TO CIVIL FLIERS. AIRPORTS WITH NO PREFIX ARE EXCLUSIVELY CIVIL AIRPORTS.

TYPE

A	- U.S. Air Force	I	- Intermediate	NG	- National Guard
C	- Commercial	M	- Municipal		
CG	- Coast Guard	N	- Navy	P	- Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified.

CLASS

(Sea Level Runway and Strip Requirements)

Class	Strip Length	Runway (Paved) Length
B-1	Less than 1800'	Less than 1600'
1	1800-2699'	1600-2499'
2	2700-3699'	2500-3499'
3	3700-4699'	3500-4499'
4	4700-5699'	4500-5499'
5	5700-6699'	5500-6499'
6	6700-7699'	6500-7499'
7	7700-8699'	7500-8499'
8	8700-9699'	8500-9499'
9	9700' +	9500' +

RUNWAYS

In "longest" column is stated length of longest landing area in hundreds of feet.

"h" indicates landing area is hard-surfaced or paved.

"sw" indicates allway field.

No differentiation is made between runways and strips as far as number of landing areas in field is concerned. In other words, two hard-surfaced runways and two sod surfaced strips will be listed as four runways.

FACILITIES AND SERVICING

RADIO

R1: Control tower voice
R2: Range (or H facility) with voice
R3: Range (or H facility) and tower
R4: Range (or H facility), tower, and ILS

LIGHTS

L : Incomplete lighting, such as flood or strip lights, which are generally available only on prior request
L1: Beacon only
L2: Beacon and boundary
L3: Beacon, boundary, and obstruction
L4: Beacon, boundary, obstruction, and flood
L5: Beacon, boundary, obstruction, flood, and runway contact
(L5): Identical to L5 except that runway contact lights are high intensity
L6: Beacon, boundary, obstruction, flood, runway contact, and instrument approach
(L6): Identical to L6 except that instrument approach lights are high intensity

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

S1: Fuel (Any S combination in parenthesis indicates only part time or irregular attendant)
S2: Fuel, storage
S3: Fuel, storage, minor aircraft repairs
S4: Fuel, storage, minor aircraft, and minor engine repairs
S5: Fuel, storage, major aircraft, and minor engine repairs
S6: Fuel, storage, major aircraft, and major engine repairs

REMARKS

(a) "91 oct." indicates fuel octanes available. "USAF", or "Navy", following octane indicates USAF or Navy contract fuel available.

(b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency.

(c) "Port. B-2 lights" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway, or strips.

(d) "TEMP INACT, NO FACS." indicates USAF airfields used either exclusively by the USAF or municipal airfields used jointly by the USAF and civil interests at which both the USAF and the civil interests are inactive. Such airfields will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the aircraft is assigned.

(e) "USAF TEMP INACT. CIVIL FACS." indicates municipal airfields used jointly by the USAF and civil interests at which the USAF facilities are inactive but civil facilities are available. Such fields may be used by military aircraft, however, only commercial service is available.

(f) OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines within at least a 15-1 glide angle are indicated.

(g) "Fld lights on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly the field lights, indicated for such a lighted field, (and in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.

NOTES

1. ← Notam data revising previous issues.**
2. "(P)" in City and Airport Name column indicates: (1) those municipal airports improved with public funds and covered by an agreement between the municipality and the U.S. Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations, or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the Department of the Army.
3. "*Effingham, 10, L5-B" in City and Airport Name column indicates that the airport is Effingham CAA Intermediate Field, Site 10 on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the C.A.A. are listed similarly except that there is no prefixed star.
4. AIRLINE STOP airport names are capitalized.
5. PRIVATE AIRPORTS are available for owner only, and not to be used by others except in emergency. Since no servicing is available for transients no "S" combination is ever assigned these fields.
6. "(Formerly Army)" or "(Formerly Navy)": These former Army and Navy fields are in the process of being disposed of by the War Assets Administration and Farm Credit Administration. Their type is difficult of determination currently and they should be used with caution as some, unable to be disposed of as airport property, are being diverted to agricultural purposes.

** At the bottom of the second column, under the heading of NEW AIRPORTS, will be found, out of alphabetical alignment, all the new airports tabulated after the type for that page had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to Commanding General, Air Transport Command, ATTN: Flight Operations Division, A-3. Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over 10 days should be forwarded to the same address for submittal to Chief of Staff, USAF, as required. Restrictions in Air National Guard Fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. That Bureau will forward approved restrictions to the above address for publishing. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration.

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of AF Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant with itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of AF Regulation 61-4, USAF aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated: AFRICA AND AZORES - Brookley Field, Ala., MacDill Field, Fla., Washington National Airport, D.C., or Westover Field, Mass. ALASKA - McChord Field, Wash., or Great Falls AFF, Mont. BERMUDA - Mitchel Field, N.Y., Brookley Field, Ala., MacDill Field, Fla., Washington National Airport, D.C., Westover Field, Mass., or Fairfield-Suisun AFF, Calif. CANADA - Great Falls AFF, Mont., Brookley Field, Ala., McChord Field, Wash., Washington National Airport, D.C., Selfridge Field, Mich., or Westover Field, Mass. CANAL ZONE, CENTRAL AMERICA, MEXICO AND SOUTH AMERICA - March Field, Calif., MacDill Field, Fla., Kelly Field, Tex., or Brookley Field, Ala. CARIBBEAN - Brookley Field, Ala., Kelly Field, Tex., or MacDill Field, Fla. ENGLAND, GREENLAND, ICELAND, AND NORTH IRELAND - Washington National Airport, D.C., or Westover Field, Mass. NOVA SCOTIA AND NEWFOUNDLAND - Washington National Airport, D.C., Westover Field, Mass., Selfridge Field, Mich., or Brookley Field, Ala. HAWAII - Fairfield-Suisun AFF, Calif. EUROPEAN THEATER - Brookley Field, Ala., MacDill Field, Fla., Washington National Airport, D.C., or Westover Field, Mass

---

V.H.F. CHANNEL ASSIGNMENTS: Following are USAF assignments:

CHANNEL	AF FREQUENCY	CHANNEL	AF FREQUENCY
A	116.1	H	134.10
B	126.18	U	108.3
C	137.88	V	108.7
D	140.58	W	109.1
G	137.70		

MINIMUM SAFE ALTITUDES ON AIRWAYS: Under USAF Regulation 60-16 and policy of USAF, minimum safe altitudes for flight along airways will be identical with those established by the Civil Aeronautics Administration. Action is being taken to amend pertinent USAF flight information publications to show these minimums.

IFR CLEARANCE MINIMUMS FOR CIVIL FIELDS: For IFR clearance to civil fields when minimum altitude over field is not shown on let-down chart contained in T.O. 08-15-3 or Pilots Handbook, USAF policy states that the "REGULAR - DAY" minimum as shown in CAA Flight Information Manual will apply. Necessary action is being taken to amend all charts to show the proper minimums.

✓ Indicates new or revised Special Notices

AIR FORCE FIELD DESIGNATIONS: To date, names and designations of Air Force fields have not been changed as a result of change of Army Air Forces to U.S. Air Force. Listings of fields as previously furnished such as "Alamogordo Army Air Field" will be used until further notice.

✓ CORRECTIONS FOR AND ADDITIONS TO USAF T.O. 08-15-1: (1) Correct page 42, by deleting local weather broadcast for Tinker Field, Okla.

(2) Correct page 26, by deleting Hayesville, Ohio listing and by showing facility at Mansfield with ident. of "MFD".

(3) Correct page 81, Pilot Procedures with Flight Service, Using USAF Military Flight Service Communications System (Plan 62), paragraph 12, by showing the Olmstead Flight Service Center, Pa., Telephone No. as Steelton 9892 effective April 1 and by deleting the present numbers as of that date.

(4) Correct pages 31 and 42, Smoky Hill AFF, Kans. Remarks to read as follows: "***. Operational Air Force GCA available, see page 87".

(5) Correct page 50, Myrtle Beach AFF, S.C., by deleting the following remarks: "Instrument training 1000' to 5000' within 50 mi. radius during IFR".

✓ CORRECTIONS FOR AND ADDITIONS TO USAF T.O. 08-15-2: (1) Correct West Palm Beach, Fla., AN/CPN-6 (YM) Beacon (X-Band) Domestic, by changing the Code to 2-2 and operating.

(2) Correct page 32, under South Carolina, by adding the following facility: Location: Folly Island; Geographical Position: 32-40-55 N lat., 79-53-23 W long.; Code: 1-1-2-1; Operating Agency: USCG; Operating Hours: Continuous.

(3) Correct page 32, under California, by adding the following facility: Location: Farallon Island; Geographical position 37-41-57 N lat., 123-00-03 W long.; Code: 1-1-2-1; Operating Agency: USCG; Operating hours: Continuous; Remarks: 096°, 24.8 mi. to San Francisco Municipal Airport.

✓ CORRECTIONS FOR AND ADDITIONS TO USAF T.O. 08-15-3: (1) Correct page 30, by deleting Peterson Field, Colorado Springs, Colo. procedure. (This procedure has been cancelled).

(2) Correct Mather Field, Calif. listing by cancelling the instrument approach procedure.

(3) Correct listing for Canadian Stations as follows: Effective January 7th, all RCAF units and all Department of Transport range stations will cease guarding 4495 kcs. Further information will be furnished regarding specific stations which will be affected.

(4) Correct page 90, by deleting the following notice under Ogden Utah (Hill Field) procedure: "Use of this procedure not authorized pending immediate monitoring of the N leg of Ogden, Utah radio range or establishment of an 'H' facility in the vicinity of the Corrine FM".

(5) Correct chart for Pope Field, by showing the elevation as 220', and correct minimum altitude accordingly.

✓ CORRECTION FOR PILOT'S HANDBOOK: Cancel Stewart Field, N.Y. procedure. (Report in April 1947 was that letdown procedure submitted to Flying Safety Service not approved, NOTAM issued that USAF aircraft not to be cleared this field under IFR, and report of January 6, 1948 indicates range still not authorized for IFR letdowns).

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators No. 9, July 29, 1946, Hydrographic Office information concerning naval and marine corps air stations and facilities, including changes in field facilities, operation rules, air/ground communications facilities, instrument approach procedures and navigational aids, should be directed to: The Division of Air Navigation, Hydrographic Office, Washington 25, D.C., for transmittal to the Civil Aeronautics Administration.

In accordance with Aviation Circular Letter No. 96-46 of June 13, 1946, approval for the closing of any naval or marine corps air station or facility to transient military aircraft for a period in excess of 10 days must be obtained from the Chief of Naval Operations. Also, approval is to be obtained from the Chief of Naval Operations before relocation or modification of any aid to air navigation, such as reorientation of radio ranges.

V.H.F. CHANNEL ASSIGNMENTS: Following are Navy assignments:

CHANNEL	NAVY FREQUENCY	CHANNEL	NAVY FREQUENCY
1	116.1	6	134.64
2	142.56	7	143.64
3	126.18	8	142.02
4	128.70	9	142.74
5	143.28	GUARD	140.58

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout, servicing, lighting, or permanent obstructions of existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or constructions, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids, however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION. (a) Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airways Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide.

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA District Airport Engineer for coordination before they are included in the Airman's Guide.

DIRECTORY OF AIRPORT NOTAMS: Because of space limitations, the airport directory perforce serves as a notam supplement. Notam data revising previous directory issues are indicated by prefixed arrows. The only airport data (other than temporary conditions) carried in the Notices to Airmen section are coordinates (latitude and longitude).

AIR RESCUE SERVICE: Headquarters, Air Rescue Service, Air Transport Command, USAF, has issued the following memorandum to all civil pilots: "Air Rescue Service is one of the services of the Air Transport Command, U.S. Air Force. Although it is military, its aid is available to you 24 hours per day in all parts of the United States. Its equipment is such that once it is alerted, besides conducting a search for you, it can furnish you aid by parachuting doctors to your assistance, if immediate medical aid is needed, and by employing specially equipped ground parties which can traverse any terrain to reach you.

"With your help, this specialized equipment and personnel can more effectively come to your aid. Too often when you are reported missing, valuable time is lost in searching for you and bringing aid to you because Air Rescue Service has no idea of your whereabouts, or there are too many probable areas in which to conduct the search. Thus, you are deprived of expert rescue facilities during the critical period following your misfortune. The simplest way to overcome this biggest disadvantage to you is to file a flight plan with Civil Aeronautics Administration, regardless of the weather along your proposed flight path. If CAA facilities are not available, leave a flight plan with a responsible party at the point of departure. This flight plan should include your name, aircraft type and number, your route, your destination, and when you propose to land there (see part 60, Civil Air Regulations). Two things to remember about a flight plan: Once you file it, follow it! When you land, close it with the nearest CAA Communications Station! If you do these things, there is less change of your becoming an incident, either "actual" or "false". By failing to close your flight plan, you will become a false incident and my thus deprive someone who really needs assistance from getting it.

"In order to become more fully informed about the work of Air Rescue Service and how it can help you in distress, you are invited to visit the nearest Air Rescue Service unit and get acquainted."

CIVIL USAGE OF MILITARY FIELDS: USAF and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

REISSUANCE OF EXPIRED PILOT CERTIFICATES: 20.550 Reissuance. Any person who on June 30, 1947, held a valid private or commercial certificate and who failed to exchange such certificate in accordance with Section 20.55 of the Civil Air Regulations, may, notwithstanding such failure and without other showing, obtain a pilot certificate with appropriate ratings upon application to the Administrator.

✓ AIRSPACE RESERVATIONS: The President of the United States by Executive Order 9925, dated January 17, 1948, created airspace reservations over the Atomic Energy Commission's projects at Oak Ridge, Tennessee; Richland, Washington; and Santa Fe, N. Mex. All aircraft flights over the following described areas except in the interest of national defense or by authority of the U.S. Atomic Energy Commission are prohibited until the aforesaid Executive Order is cancelled:

(a) Clinton Engineering Works, Oak Ridge, Tenn., beginning at lat. 36-00-25, long. 84-07-05; thence to lat. 35-51-35, long. 84-16-25; thence to lat 35-52-10, long. 84-24-15; thence to lat 35-55-45, long. 84-29-30; thence to lat. 36-05-05, long. 84-13-30; thence to lat 36-00-25, long. 84-07-05, point of beginning.

(b) Hanford Engineering Works, Richland, Wash., beginning at lat. 46-33-40, long. 119-13-00; thence to lat. 46-20-00, long. 119-13-13; thence to lat. 46-18-06, long. 119-30-00; thence to lat. 46-26-00, long. 119-47-25; thence to lat. 46-40-45, long. 119-47-28; thence to lat. 46-46-50, long. 119-33-35; thence to lat. 46-46-50, long. 119-28-16; thence to lat. 46-33-40, long. 119-13-00, point of beginning.

(c) Los Alamos Project, Santa Fe, N. Mex., beginning at lat. 36-00-00, long. 106-04-00, thence along the Rio Grande River to lat. 35-45-00, long. 106-15-00; thence to lat. 35-45-00, long. 106-30-00; thence to lat. 36-00-00, long. 106-30-00; thence to lat. 36-00-00, long. 106-04-00, point of beginning.

RADIO TELEPHONE-OPERATION AUTHORIZATION: This is the simple way in which an authorization to operate a radio telephone transmitter in an aircraft is obtained: the applicant appears in any of the Federal Communications Commission field offices, or before any CAA flight examiner of the CAA, who has been designated by the FCC to issue the permits, proves he is a U.S. citizen, that he has need of such authorization, and that he understands the few simple rules and regulations. He is given a card granting the authorization then and there.

FCC offices are listed under U.S. Government in phone books, and there are some 30 of them throughout the country. Mostly, they are in downtown offices. There are more than 1,000 CAA designated flight examiners. Mostly they are located at airports.

The "examination", if it may be so described, consists of a few questions establishing

the ability of the applicant to transmit and understand spoken messages in English, and to understand the simple rules governing the use of such equipment. He is also given simple, printed instructions for its use.

NOTICE TO ALL FLYING PERSONNEL: Because of the increase in aircraft operations, both civil and military, in recent months, the number of complaints regarding airplane noise nuisance has reached such proportions that the advancement of aviation and development of new airports are in danger of being severely retarded.

To reduce the number of such complaints, it is requested that the following practices be put into effect by all fliers:

1. Discontinue all unnecessary low flying.
2. When weather and traffic volume permit, increase altitudes of all traffic patterns that require flight over inhabited areas.
3. Re-route channels of approach and departure to avoid residential and business districts whenever possible.
4. If the airport is located near inhabited areas, reduce power and increase pitch of propellers as quickly as possible during take-off so as to keep engine and propeller noises at a minimum.
5. Keep rpm's set at a minimum required operational setting when low flying over populated areas is necessary.

SEAPLANE OPERATIONS: Because of the possibility of local ordinances or restrictions prohibiting seaplane operations in resort or congested areas, the Administrator has issued the following advice to seaplane operators:

"1. Take off as far out from the shore as possible.
2. Cut the take off run as short as safety permits.
3. Fly high enough to avoid criticism from residents below, or arrange the flight plan so that you pass over as few houses as possible.
4. Avoid unnecessary 'gunning' or racing of the engine.
5. Explain carefully to those who complain what you are doing to make your airplane a good neighbor.

"In the CAA-Federal-Aid Airport program, we are promoting the use of seaplanes by assisting communities in establishing inexpensive docking and servicing facilities. In view of the high utility value of the seaplane or amphibian, we believe this to be a definite step in the advancement of personal flying in general. Hence, if we are to find acceptance of such facilities, it is up to those pilots who now operate seaplanes to assist us to the utmost by safe and considerate operation of their aircraft."

N.B. The Administrator's admonition was occasioned by numerous complaints received from lake-side residents and vacationists.

SEAPLANE BASE DIRECTORY: A new Seaplane Base Directory dated December 1, 1947, has gone to press. It is being mailed to all seaplane owners and bases. Owners or base operators who are not already on the mailing list, may secure it upon request to the Office of Aviation Information, Attention: A-258, C.A.A., Department of Commerce, Washington 25, D.C.

CONTROL TOWER TUNING PRECAUTION: On some aircraft receivers, the channel of 278 kcs is identified as "tower", on the tuning control nameplates. This is not always correct as many towers transmit on frequencies other than 278 kcs. Reports indicate that some confusion is being created by the failure of pilots to tune their receiver to the tower transmitting frequency when such frequency is other than 278 kcs. It is suggested that pilots use care and make certain that they are tuned to the transmitting frequency of the tower with which they desire to communicate.

USE OF AIRPORT UTILITY FREQUENCIES - 121.7 AND 121.9 MCS: The airport ground control frequencies of 121.7 and 121.9 mcs are provided to eliminate the frequency congestion caused by numerous radio contacts between the tower and taxiing aircraft and the tower and airport utility vehicles, thus providing a clear channel in the 118 mcs band for arriving and departing aircraft. Normally, landing aircraft remain tuned to the 118 mcs band frequency unless otherwise instructed by tower.

The ground control frequencies are used for the issuance of taxi information, ATC clearances and any other contacts between the tower and aircraft or vehicles operating on the airport.

V.H.F. IFR FLIGHTS: Until further notice, Air Traffic Control will be exercised on the assumption that aircraft are utilizing intermediate frequency radio ranges. If a pilot desires to conduct IFR flight using VHF ranges over all or a portion of the route, his flight plan should so indicate. Further, flights should not be conducted on civil airways in IFR weather using VHF ranges unless the ATC clearances so authorize.

PRIVATE FLIER VHF FREQUENCIES: CAA Communications Stations and Towers guard the private flier frequencies of 122.1 mcs for transmission to CAA Communications Stations and 122.5 mcs for transmission to CAA operated towers.

CAA Communications Stations normally reply to itinerant aircraft on the voice feature of the range, low frequency or VHF, whichever is applicable. Replies are made on 111.1 mcs if VHF reply has been requested on other than range frequency. CAA airport control towers will reply to itinerant aircraft on one of the frequencies 118.3, 118.5, 118.7, or 118.9 mcs, in addition to towers' low frequencies.

RADIOTELEPHONE COMMUNICATIONS: The word ROGER in radiotelephone communications means "I have received all of your last transmission", and its use in any other sense by CAA stations and towers is not authorized. In order to avoid confusion it is suggested that pilots engaging in air-ground contacts also limit the use of ROGER to acknowledgment of transmissions.

Pilots enroute are requested to avoid, if possible, calling airway communications stations at or about 15 and 45 minutes past the hour (which are the scheduled broadcast times) to request weather information, as such calls may delay starting of scheduled broadcasts and cause inconvenience to other persons who are dependent on the broadcasts for weather reports.

VISUAL-AURAL RANGE (VAR MONITORING): Only visual courses of VAR facilities are monitored continuously.

TWO-WAY RADIO FAILURE PROCEDURES: In the event of failure of two-way radio communications between an aircraft and the ground, the pilot will observe one of the following procedures: (a) If operating under VFR conditions, proceed under VFR and land as soon as practicable, or,

(b) Proceed according to the latest air traffic clearance.

If the pilot proceeds according the the latest traffic clearance but has not received and acknowledged a clearance to the tower and if other instructions to the contrary are not received, he shall be expected to observe the following and control will be effected accordingly: (1) If the pilot has received and acknowledged a clearance to the destination airport or the radio facility serving that point, he shall continue flight at the altitude(s) last assigned by Air Traffic Control, or the minimum instrument altitude, whichever is the higher, to the radio facility serving the destination airport.

(2) If the pilot has received and acknowledged a clearance to a point other than the destination airport or the radio facility serving the destination airport, he shall continue flight at the altitude(s) last assigned by Air Traffic Control or the minimum instrument altitude, whichever is the higher, to the radio facility serving the destination airport.

(3) If holding instructions have been received, the pilot shall comply with these instructions until such time as it will be necessary to continue flight so as to arrive at the radio facility serving the destination airport at the expected approach time last received and acknowledged, maintaining the last assigned altitude or the minimum instrument altitude, whichever is the higher.

(4) If holding instructions have been received, but no expected approach time has been

received, the pilot shall comply with these instructions until the time Air Traffic Control has specified that further clearance may be expected. He shall then continue, maintaining the last assigned altitude or the minimum instrument altitude, whichever is the higher.

NOTE: The minimum instrument altitude referred to is the minimum established for that portion of the route over which the operation is conducted, regardless of the direction of flight.

Approach: Descent from the altitude maintained to the radio facility serving the destination airport shall be made on the final approach course and shall start at the expected approach time last received. If no expected approach time was received, descent shall be started at the last estimated arrival time specified by the pilot, or as soon as possible thereafter. A full standard instrument approach should be executed unless a VFR approach can be made.

If a clearance to the tower at the airport of intended landing has been received and acknowledged, the pilot shall be expected to comply with any special instructions contained in the clearance and make normal descent for landing.

NOTE: Air Traffic Control may issue appropriate instructions to be broadcast "blind" over air carrier radio facilities (for air carrier aircraft), and over suitable radio range facilities. Instructions must not be broadcast unless Air Traffic Control authorizes such broadcast.

VFR (Formerly CFR) FLIGHT PLANS, AND ARRIVAL REPORTS: VFR flight plans may be filed with any CAA airways communication station or air route traffic control center. VFR flight plans are not transmitted. One hour after E.T.A., if no notice of arrival is received at the station at which the flight plan was filed, queries are sent out over CAA communication systems. If the arrival report is not received within three hours, search and rescue operations are initiated. Inasmuch as the Government may be put to considerable expense in determining the location of aircraft when an arrival report is not filed, it is vitally necessary that all pilots using this service make certain that notice of arrival is filed with the CAA communications station at the termination of the flight.

To reduce radio congestion, pilots should file VFR flight plans, when required, in person or by telephoning the airways communications station or air route traffic control center. CAA control towers have discontinued accepting VFR flight plans for transmission and will not normally transmit arrival reports except upon the specific request of the pilot. Whenever practicable, however, it is desired that arrival reports be filed in the same manner as flight plans. (This corrects Chapter IX, page 114, of the July 1, 1947 Flight Information Manual).

FILING ROUTE OF FLIGHT IN IFR FLIGHT PLANS: It is important that no misunderstanding exist between the pilot and Air Traffic Control concerning the proposed route of flight specified in a flight plan. Prior to filing a flight plan, the Coast and Geodetic Survey Radio Facility Charts should be consulted and an accurate description of the route of flight determined.

If the entire flight is to be conducted along civil airways, the route may be described by indicating the color abbreviation and number of the airway(s) to be flown. Civil airways which cross or merge for short distances with the airway being flown should not be indicated.

Example: "Departing Robertson Field, St. Louis, cruising 7,000' via Amber Airway 5, Blue Airway 6, and Red Airway 12, to Municipal Airport, Chicago".

The route of flight along the civil airway may also be described by specifying each designated reporting point along the airway, rather than the airway color and number. If this method is used, however, each designated reporting point (depicted as green dots on Coast and Geodetic Survey Radio Facility Charts) must be specified, plus the identification of sufficient on-request reporting points (red dots) to definitely indicate the route.

Example: "Departing Robertson Field, St. Louis, Missouri, cruising 7,000' via Springfield, Peoria, and Moline, to Municipal Airport, Chicago".

The use of the airway color and number is particularly applicable to flights over extended distances, while the use of the designated reporting point method is more applicable to short distance flights or to definitely indicate the route in congested areas where alternate routing is available. A combination of both methods should be used, when necessary.

Example: "Departing Robertson Field, St. Louis, cruising 7000' via Amber Airway 5, Blue Airway 6, Red Airway 12, Yorkville Intersection, Joliet Intersection, and Lansing Intersection, to Municipal Airport, Chicago".

If a flight is to be conducted on a direct off-airway route which may cross civil airways or coincide with civil airways for only a short distance, the route of flight should be indicated by use of the identification of reporting points over which the flight will pass. On long distance flights, at least one reporting point in each air route traffic control flight advisory area through which the flight will pass must be indicated. In order that there will be no misunderstanding that the pilot proposes to conduct flight direct between the two reporting points, the word "DIRECT" must be specified between each of the reporting points.

Example: "Departing Scott Field, cruising 5000', direct to Kirksville, direct to Des Moines Municipal Airport".

The on-airway method and the direct operation method may be combined to describe the route of flight when only a portion of the route will be flown via the airways. It is important to remember, however, that the word "DIRECT" must at all times be specified between the reporting points between which direct operation is proposed. Failure to specify the word "DIRECT" would indicate that flight is proposed via the airways between the reporting points specified.

Example: "Departing Scott Field, cruising 7000' direct to Crystal City Intersection, via Amber Airway 5 to Advance, direct to Walnut Ridge Army Air Field".

Air Traffic Control normally attempts to issue a traffic clearance specifying the altitude and route proposed in the flight plan. However, due to traffic conditions, it is frequently necessary that Air Traffic Control specify an altitude or route different from that requested by the pilot. It is important that pilots pay particular attention to the altitude and route specified in the air traffic clearance and not assume that the route and altitude is the same as that requested in the flight plan. If any doubt exists, the pilot should verify the clearance with Air Traffic Control.

CLEARANCE PROCEDURES FOR IFR FLIGHT: Effective October 8, 1947, and concurrent with effective date of CAR 60 as revised, new clearance procedures for IFR flights are being used in the control of Air Traffic.

1. No Air Traffic Control clearance will be issued for flights operated in accordance with visual flight rules except for flights within a control zone as prescribed in C.A.R. 60.2.

2. Flight plans specifying flight in accordance with VFR for a portion of a flight will be accepted at the point of departure. If VFR flight is proposed for the first portion of the flight, the pilot will be advised to request IFR clearance from the appropriate communications station along the route of flight. The pilot must remain in VFR weather conditions until the clearance is received.

3. When a flight plan indicates IFR flight for the first portion of flight and VFR for the latter portion, the aircraft will be cleared to the point at which VFR flight is planned, inasmuch as no clearance is necessary for VFR flight. The pilot is expected to continue his flight without further contact with Air Traffic Control.

4. Standard separation from other IFR traffic will be provided aircraft on IFR flight plans, except (a) when "at least 500' on top" has been assigned or authorized by ATC in lieu of a cruising altitude if frequent pilot reports indicate a generally unlimited ceiling on top and a forward visibility of at least 3 miles. (b) when VFR operation is specified by ATC during climb to cruising altitude, descent from cruising altitude, or change of altitude enroute. If the flight cannot be conducted under VFR conditions, when such clearance is received, it is the pilot's responsibility to secure an amended clearance before proceeding IFR.

5. Pilots may cancel IFR flight plans at any time by so notifying ATC provided they are operating in VFR weather conditions when they take such action. Where conditions indicate that the remainder of a flight can be conducted in accordance with VFR, a pilot should avail himself of this procedure to lift the restrictions on his own flight and to simplify the general traffic situation. Caution should be exercised, however, that flight plans not be cancelled when IFR conditions are expected in some subsequent portion of a flight. When a flight plan is cancelled and a new instrument clearance is later requested, priority of handling will be based upon the time of filing the new flight plan.

6. When a flight plan is filed indicating altitude change beyond the control area of the center controlling the point of departure, the flight will be cleared to destination with in-

structions to maintain the altitude at which the aircraft enters the next control area. The pilot should request further altitude changes enroute. Better service can be given the pilot if an altitude change is requested at the time the change is desired.

This procedure cancels and supersedes the Altitude/VFR procedure now contained in the Flight Information Manual.

AIRPORT LIGHT SIGNALS: Effective October 8, 1947, the following special light signals are prescribed by the Administrator for use at airports in accordance with C.A.R. 60.108(e): (1) A white rotating airport beacon lighted during daylight hours, or flashing lights on a tetrahedron during the hours of darkness, shall mean the official ground visibility at the airport is less than three miles, and that if the airport is within an airport control zone, a traffic clearance is required for landing, takeoff or flight in the traffic pattern.

(2) A flashing amber light at an airport shall mean clockwise flow of traffic is in effect and that right turns shall be made unless otherwise authorized by Air Traffic Control. These special light signals are in addition to those prescribed in the CAA Flight Information Manual for use with a directed portable traffic signal light, and will be included in the next edition.

AERONAUTICAL CHART AND PUBLICATION CORRECTIONS: (1) Correct Coast and Geodetic Radio Facility Chart No. 20, by showing the Control Area Boundary on Green Airway #3, between the New York and Cleveland Control Centers as 25 miles W of the Philipsburg, Pa. range station.

(2) Correct Radio Facility Chart No. 17, by showing the identification for Hillsdale FM as 1 dash (-) rather than dot dot dash (. . -)

(3) Correct Radio Facility Chart No. 34, by showing the Overseas Foreign Aeronautical Communications Station located at New Orleans Airport rather than Moisant Airport.

(4) Correct Radio Facility Chart No. 8, by showing Superior Mont. radio range guarding 122.1 mcs, in addition to those listed.

(5) Correct Radio Facility Chart No. 28, by showing additional voice facility as available at Oklahoma City communications station on 111.1 mcs.

RELOCATION OF AIR ROUTE TRAFFIC CONTROL AREA BOUNDARY: Effective January 15, 1948, the Seattle-Vancouver Air Route Traffic Control Area Boundary on Blue Civil Airway #32, was relocated to 25 miles SE of the Patricia Bay, B.C. radio range station.

LOCATION IDENTIFIERS: The C.A.A. Federal Airways Manual of Operations II-B-4-2 entitled "Location Identifiers" soon to be released, replaced the current publication entitled "Identification". The new manual becomes effective March 1, 1948, and involves changes in almost all of the identifiers used to identify U.S. weather reports and for other teletype purposes. It further requires changes in all of the existing two-letter identifiers for radio ranges, localizers, and type "H" facilities in the U.S., its territories and possessions to three-letter identifiers.

All of the teletype changes involved are expected to be accomplished on March 1, 1948, however; the change-over program of radio ranges, localizers, and type "H" facilities will be accomplished in a gradual manner. Advance notices of these radio identification changes will be published in the Airman's Guide until all the changes have been accomplished.

In an effort to assist all concerned in becoming familiar with the new three-letter identifiers, the January, 1948 issue of the "Flight Information Manual" will list every location to which an identifier is presently assigned, immediately followed by both the current identifier and in parenthesis the identifier which will be placed in use on March 1, 1948, as the location identifier, and on or after March 1, 1948, as the radio facility identifier. Appropriate teletype notices to airmen will be issued covering changes in radio facilities identifiers.

WEATHER REPORTING SERVICE

Weather Reporting Location	Type of Report	Lat., Long.	Elev.	Action Taken
Humboldt, Nevada	Hourly & 6-hourly			Discontinued
Greenville, N.C.	6-hourly			Discontinued
El Dorado, Texas	3-and 6-hourly			Discontinued
Point Mugu, Calif.	Pibal	34-07,119-07	11'	Made Avail.
Waterloo, Iowa	SW	42-33, 92-24	867'	Inaugurated
Hot Springs, Ark. (Mem'l Arpt)	SW	34-29,93-06	525'	Inaugurated
Ozona, Tex.	3- and 6-hourly	30-43,101-12	2355'	Inaugurated
San Nicolas Island, Calif.	Pibal	33-18,119-28	503'	Made Avail.
Birmingham, Ala.	Rawin	33-34, 86-45	6295'	Inaugurated
San Angelo, Tex. (Mathis Fld)	6-hourly	31-22,100-30	1903'	Inaugurated

NOTE: Terminal forecasts inaugurated for Valdosta, Georgia. Terminal forecasts made available for Teterboro, N.J. Hourly reports in lieu of SW reports now available from Los Alamitos, Calif.

TELETYPE NOTAMS: Throughout the year climatic conditions (snow storms, floods, etc.) render many fields temporarily unusable or unsafe. In addition, there are intermittent maintenance operations in progress on many fields. Radio facilities suffer temporary power failures or course misalignments, and lighting facilities are temporarily inoperative. Because these temporary conditions cannot be given immediate coverage in the "Airman's Guide", full cognizance must be taken of Teletype Notam service which gives the desired coverage on any facility or field at which teletype transmitting stations are based. Cross-country pilots, accordingly, should consult these Teletype Notams for latest available data on air navigation aids These teletype notams are posted in CAA Communications Stations and in all Air Force Field and Naval Air Station Operations Offices having teletype drops.

AIRPORT TRAFFIC CONTROL PROCEDURES: (a) Planes with 2-way radio should establish communication with control tower when 15 miles from the airport of destination and before taxiing or taking off.

(b) Planes without receivers, when approaching tower-controlled fields, and before taxiing and taking off, should be on the alert for and be guided by light gun signals. (See AFF Regulation 100-4, dated March 4, 1944, and C.A.R. Digest or Manual 60).

(c) Flashing tetrahedron lights, as well as the daylight operation of rotating beacons, indicate that the ground visibility is less than 3 miles and a traffic clearance is necessary to enter the traffic pattern of airports within the control zone.

FOREIGN SPECIAL NOTICES

INTERNATIONAL NOTAMS: The only source of international notams is the C.A.A. Overseas-Foreign Aeronautical Communications Stations at the following locations: New York, N.Y., Miami, Fla., New Orleans, La.; Balboa, Canal Zone; San Francisco, Calif.; Seattle, Wash.; Honolulu, Hawaii; Anchorage, Alaska.

FOREIGN ENTRY PROCEDURES, AIRPORTS OF ENTRY, CUSTOMS REPORTS, CIVIL AIRCRAFT CLEARANCE FOR FOREIGN COUNTRIES: These procedures and regulations are all incorporated into the Flight Information Manual, Volume 2, No. 2, dated January 1, 1948. Only amendments to the data contained in the Manual will hereafter be carried in the Airman's Guide.

LONDON, ENGLAND: Pilots entering or operating within this area should be familiar with all notams available at the New York International Notam Office.

N.B. The British Government has reported several violations of local air traffic rules. Disciplinary action will be taken on future violations.

DANGER AREA IN THE VICINITY OF ENIWETOK ATOLL, PACIFIC OCEAN: Effective January 31, 1948, a Danger Area will be established in the vicinity of Eniwetok Atoll, about 2400 miles WSW of Honolulu, Hawaii, by the Atomic Energy Commission. The Danger Area, which will be activated throughout the rest of the calendar year 1948, is described as follows: Beginning with a point at 10°15' N latitude and 160°35' E longitude, N along the meridian of 160°35' E long., to a point at 12° 45' N lat., 160°35' E long., thence E along the parallel of 12°45' N lat., to a point at 12° 45' N lat. and 163°55' E long., thence S along the meridian of 163°55' E long., to a point at 10°15' N lat. and 163°55' E long., thence W to the point of beginning. Because of the grave hazards resulting from tests of military weapons in this area it should be categorically avoided under all circumstances until further notice.

FLIGHT PLAN ZONE ESTIMATES: Overseas Air Traffic Control Lagens, Azores has requested flight plans for aircraft enroute from New York Overseas Air Traffic Control Area to or through Lagens, Az. Overseas Air Traffic Control Area include zone estimated time of arrival as prescribed in ICAO Document 2019, Part 3, Air Traffic Control Paragraph 3.1.2 NOTOF, New York.

AIRPORT AND RADIO NOTICES

LEGEND

** - New or revised airport, danger area, or miscellaneous data to be inscribed on charts or added to records.

★ - New or revised radio data to be inscribed on charts or added to records.

ALABAMA: ATHENS ARPT: E/W strip soft in wet weather. (10-14)

BIRMINGHAM-RADIO: VHF omni-directional rng without voice operates on test basis, fac unmonitored, and subject to interruptions; not to be used for navigational purposes. Freq. 116.3 mcs, ident. "BH".

BIRMINGHAM ARPT: Closed to civil acft not equipped with operating rcvr. Landing on sod areas approved by twr in dry weather, unsafe in wet weather. Ctn ngts or under IFR, plant S of fld has long taxi and parking strips resembling rnwys. (11-6)

BRIDGEPORT-ALA-TENN-GA ARPT: Ctn when wet. (10-14)

BROOKLEY FLD (MOBILE)-Soft-use rnwys, taxi strips only. (10-26)

CENTRE ARPT: NNW/SSE strip closed. N side E/W strip rough. (10-14)

CRAIG FLD (SELMA): Bndry lgts inop. Fuel avail. on off. bus. only. (10-27)

CUSSETA, BCN SITE 34, NO-AG: Will be decomm about Feb. 3, 1948. (1-13)

DAWES, BCN SITE 11, NO-AG: Will be decomm about Feb. 3, 1948. (1-13)

EAST TALLASSEE, BCN SITE 31, NO-AG: Will be decomm. about Feb. 3. (1-13)

FOLEY-OAK ARPT: W end E/W, N end N/S strips soft in wet weather. (10-14)

HOPE HULL, BCN SITE 27, NO-AG: Will be decomm about Feb. 3. (1-13)

JASPER-WALKER CO. ARPT: Land inside of bndry mrkrs. Avoid new landing strip now being graded. (10-14)

LIVINGSTON-JACKSON FLD: Rolling and slightly rough. Soft spots along N side at SW end. (10-14)

★MAXWELL FLD (MONTGOMERY)-RADIO: Army twr now grds 396,3105,4495,6210,3117.5 kcs, 126.18 mcs. (12-31) FLD: At ngt or under IFR conditions large depot 1 mi S looks like arpt and lgts give impression of parallel rnwys. (10-17)

MOBILE-RADIO: Auto. rng monitor. sys inop. (12-30).

MOBILE-BATES FLD: N/S rnwy lgts inop. Equip. on fld. (1-7)

MONROEVILLE-LEGION FLD: Do not confuse golf course fairways with landing strips. (10-14)

MONTGOMERY-RADIO: VHF omni-directional rng comm on test basis, unmonitored, unattended and subject to interruptions, not to be used for navigational purposes. Ident. "TDN" freq. 112.1 mcs. (12-8)

MUSCLE SHOALS ARPT: Equip. on fld intermittently days except Sat. and Sun. Trucks flagged. (12-22)

TALLADEGA ARPT: N 700' N/S strip soft in wet weather. (10-14)

WINFIELD ARPT: S end N/S strip soft in wet weather. (10-14)

ARIZONA: DAVIS MONTHAN FLD (TUCSON): E fld closed-acft parked on rnwys. Blinding ceilometer W end fld between ends of NW/SE, E/W rnwys. Obst lgt inop on 75' pole SE control twr. Former taxi strips 12R and 30L are now open as Rnwys 12R and 30L to be used by lgt acft and rstd to day opers only. (12-30)

GILA BEND AFF: Maj obsts S fld lgtd. (7-21)

LITCHFIELD PARK NAF: No landings permitted later than one-half hr before sunset without prior approval from C.O. No ngt opers. (10-3)

LUKE FLD (PHOENIX): Traffic direction indicator on 2nd hangar from N not operating. (10-15)

MESA-OASIS ARPT: W end E/W, SW end NE/SW strips unsafe for a distance of 500' (ditches across ends). (7-24)

PHOENIX-RADIO: Visual courses of VHF rng not monitored. (8-18). Freq. 108.3 mcs, ident. "PH".

PHOENIX: Inst. training on Phoenix Rng between 5500' and 9500'.

PHOENIX-SKY HARBOR ARPT-RADIO: CAA ILS operating on experimental basis and unmonitored. (12-27)

PHOENIX-SKY HARBOR ARPT: Local ngt flying acft must be equipped with 2-way radio. Equip. near Rnwy 12. Installation of ILS in progress off end of Rnwys 26 and 8. (10-3)

WILLCOX-COCHISE COUNTY ARPT: Tetrahedron unreliable. Cattle on fld. (12-8)

WILLIAMS FLD (CHANDLER)-RADIO: USAF rng unreliable and to be used for training only. (12-3) FLD: Use rnwys only. Exten rnwy repairs being conducted. All acft use ctn from 1200M Fri until 0800M Mon each week. No fuel avail. trans acft. (8-20)

WINSLOW-RADIO: Visual-aural rng station operates unattended or without means of remote monitor. Freq. 108.7 mcs, ident. "WO".

WINSLOW ARPT-RADIO: CAA ILS lclzr and glide path comm Dec 19 on an experimental basis, serving Rnwy 26. Approach heading 266° Sys will operate without middle and outer mrkrs. Lclzr freq 110.3 mcs, ident. "WNW" Lctd 1450' WNW of WNW end of rnwy. Voice feature controlled from INSAC will be comm in near future. Glide path freq 335 mcs. Angle: 2.6°, lctd 900' WNW of ESE end of rnwy 390' right of rnwy centerline. Point of ctc 300' from rnwy end. (12-19) FLD: Acft with rdo ctc Winslow Rdo for lgts. Non-rdo equipped acft circle arpt and flash navigation lgts when rnwy lgts rqrd. (1-6)

YUMA-YUMA CO. ARPT: Bndry lgts not avail. Tetrahedron lgts only on req. Bcn inop. (12-29)

[redacted]: BATESVILLE ARPT: N/S strip and E end E/W strip under const-unusable. Taxiway to fuel pump hazardous. (10-17)

EL DORADO-RADIO: VHF visual-aural rng courses grnd checked only. Shut down intermittently days, weather permitting, for repairs. (1-15)

FORT SMITH ARPT: W end NW/SE, N end NE/SW rnwys closed. (12-7)

HOT SPRINGS-MEMORIAL ARPT: Ctn in traffic. Inten. student training. No twr control. Use rnwys only. (10-23)

LUXORA INT, SITE 39, NO-LS: 30' unlgtd p-line being erected S end N/S rnwy. (9-27)

SEARCY MUN. ARPT: Under const. Use with extreme ctn. (10-3)

WALNUT RIDGE AFF: Acft parked all areas fld and ramp. Use rnwys only. Equip. on fld. Closed 1730 to 0800. NE/SW rnwy closed. (10-23)

[redacted]: ALAMEDA NAS: Maintain high approach on Rnwys 26L and 21. Hvy acft parked these areas. 175' unlgtd cranes 2000' from NE corner fld-ctn ngts and during low visibility. Equip. adj to and on rnwys. Fld on positive control. (10-3)

ARCATA-REDWOOD FLD: Closed to acft without 2-way rdo. Use surfaced areas only. (10-3)

AVALON-CATALINA ISLAND-CATALINA ARPT: Private. Scheduled Airline opers only. Use by acft other than United Airlines, Inc., absolutely prohibited. (12-3)

BAKERSFIELD-KERN CO. ARPT-RADIO: CAA ILS inop temp, will be recomm with voice and ident "BD". Middle mrkr will be inop for installation of compass lctr (1-10) FLD: Unlgtd 92' pwr line 1/2 mi N of bndry. (10-30)

BECKWOURTH-PLUMAS CO. ARPT: Use rnwys, taxi strips only-turf rough. (6-2)

BLYTHE AFF: Obst lgts atop control twr inop. (2-28)

BLYTHE-BRESSON ARPK: Soft spot W side N/S strip. (10-3)

BOCA, BCN SITE 17A, SF-SL: Bcn inop. (9-22)

BRAWLEY-O'CONNELL BROTHERS ARPT: N/S strip avail. for taxiing only, muddy when wet. (10-3)

BURBANK-LOCKHEED AIR TERMINAL: Closed to all trans P-80 acft except on special projects for modification that stn. Right traffic Rnwys 7, 15; left traffic Rnwys 25, 33. Approach lgts Rnwy 7 changed to red. 2-way rdo rqrd all acft. Rnwy 13-31 closed

[redacted] (parked acft). No NG facs. (7-9)
CASTLE FLD (MERCED)-Use rnwy 12-30 only; acft parked on landing mat. Approach lgts Rnwy 12-30 inop. (1-16)
CATALINA ISLAND-CATALINA ARPT: Private. Scheduled airline opers only. Use by acft other than United Air Lines, Inc., absolutely prohibited. (12-3)
CEDARVILLE ARPT: CLOSED to all opers. (9-10)
CHINO-CAL AERO ARPT: Use rnwys only-parked acft. (10-3)
COALINGA ARPT: Left traffic at 500'. (10-23)
COTATI OLF: Crash truck avail. at Santa Rosa NAAS on req. (10-3)
DAGGETT INT, SITE 13, LA-AQ: Areas immediately outside bndry lgts utilized for sto. Remain on rnwys unless in vcnty of bldgs N of intersection Rnwys 3, 7. (10-23)
EL CAJON-GILLESPIE ARPT: Right traffic when landing and taking off to the E. (10-16)
EL CENTRO NAS: Avail. 0700 to 1800. Other hrs on 30 minutes prior notice. Tetrahedron lgtd all times. (10-3)
EUREKA-HUMBOLDT CO. ARPT: 25' fone wires NW end NW/SE rnwy, 100' back from end of rnwy. Right traffic pattern. (10-3)

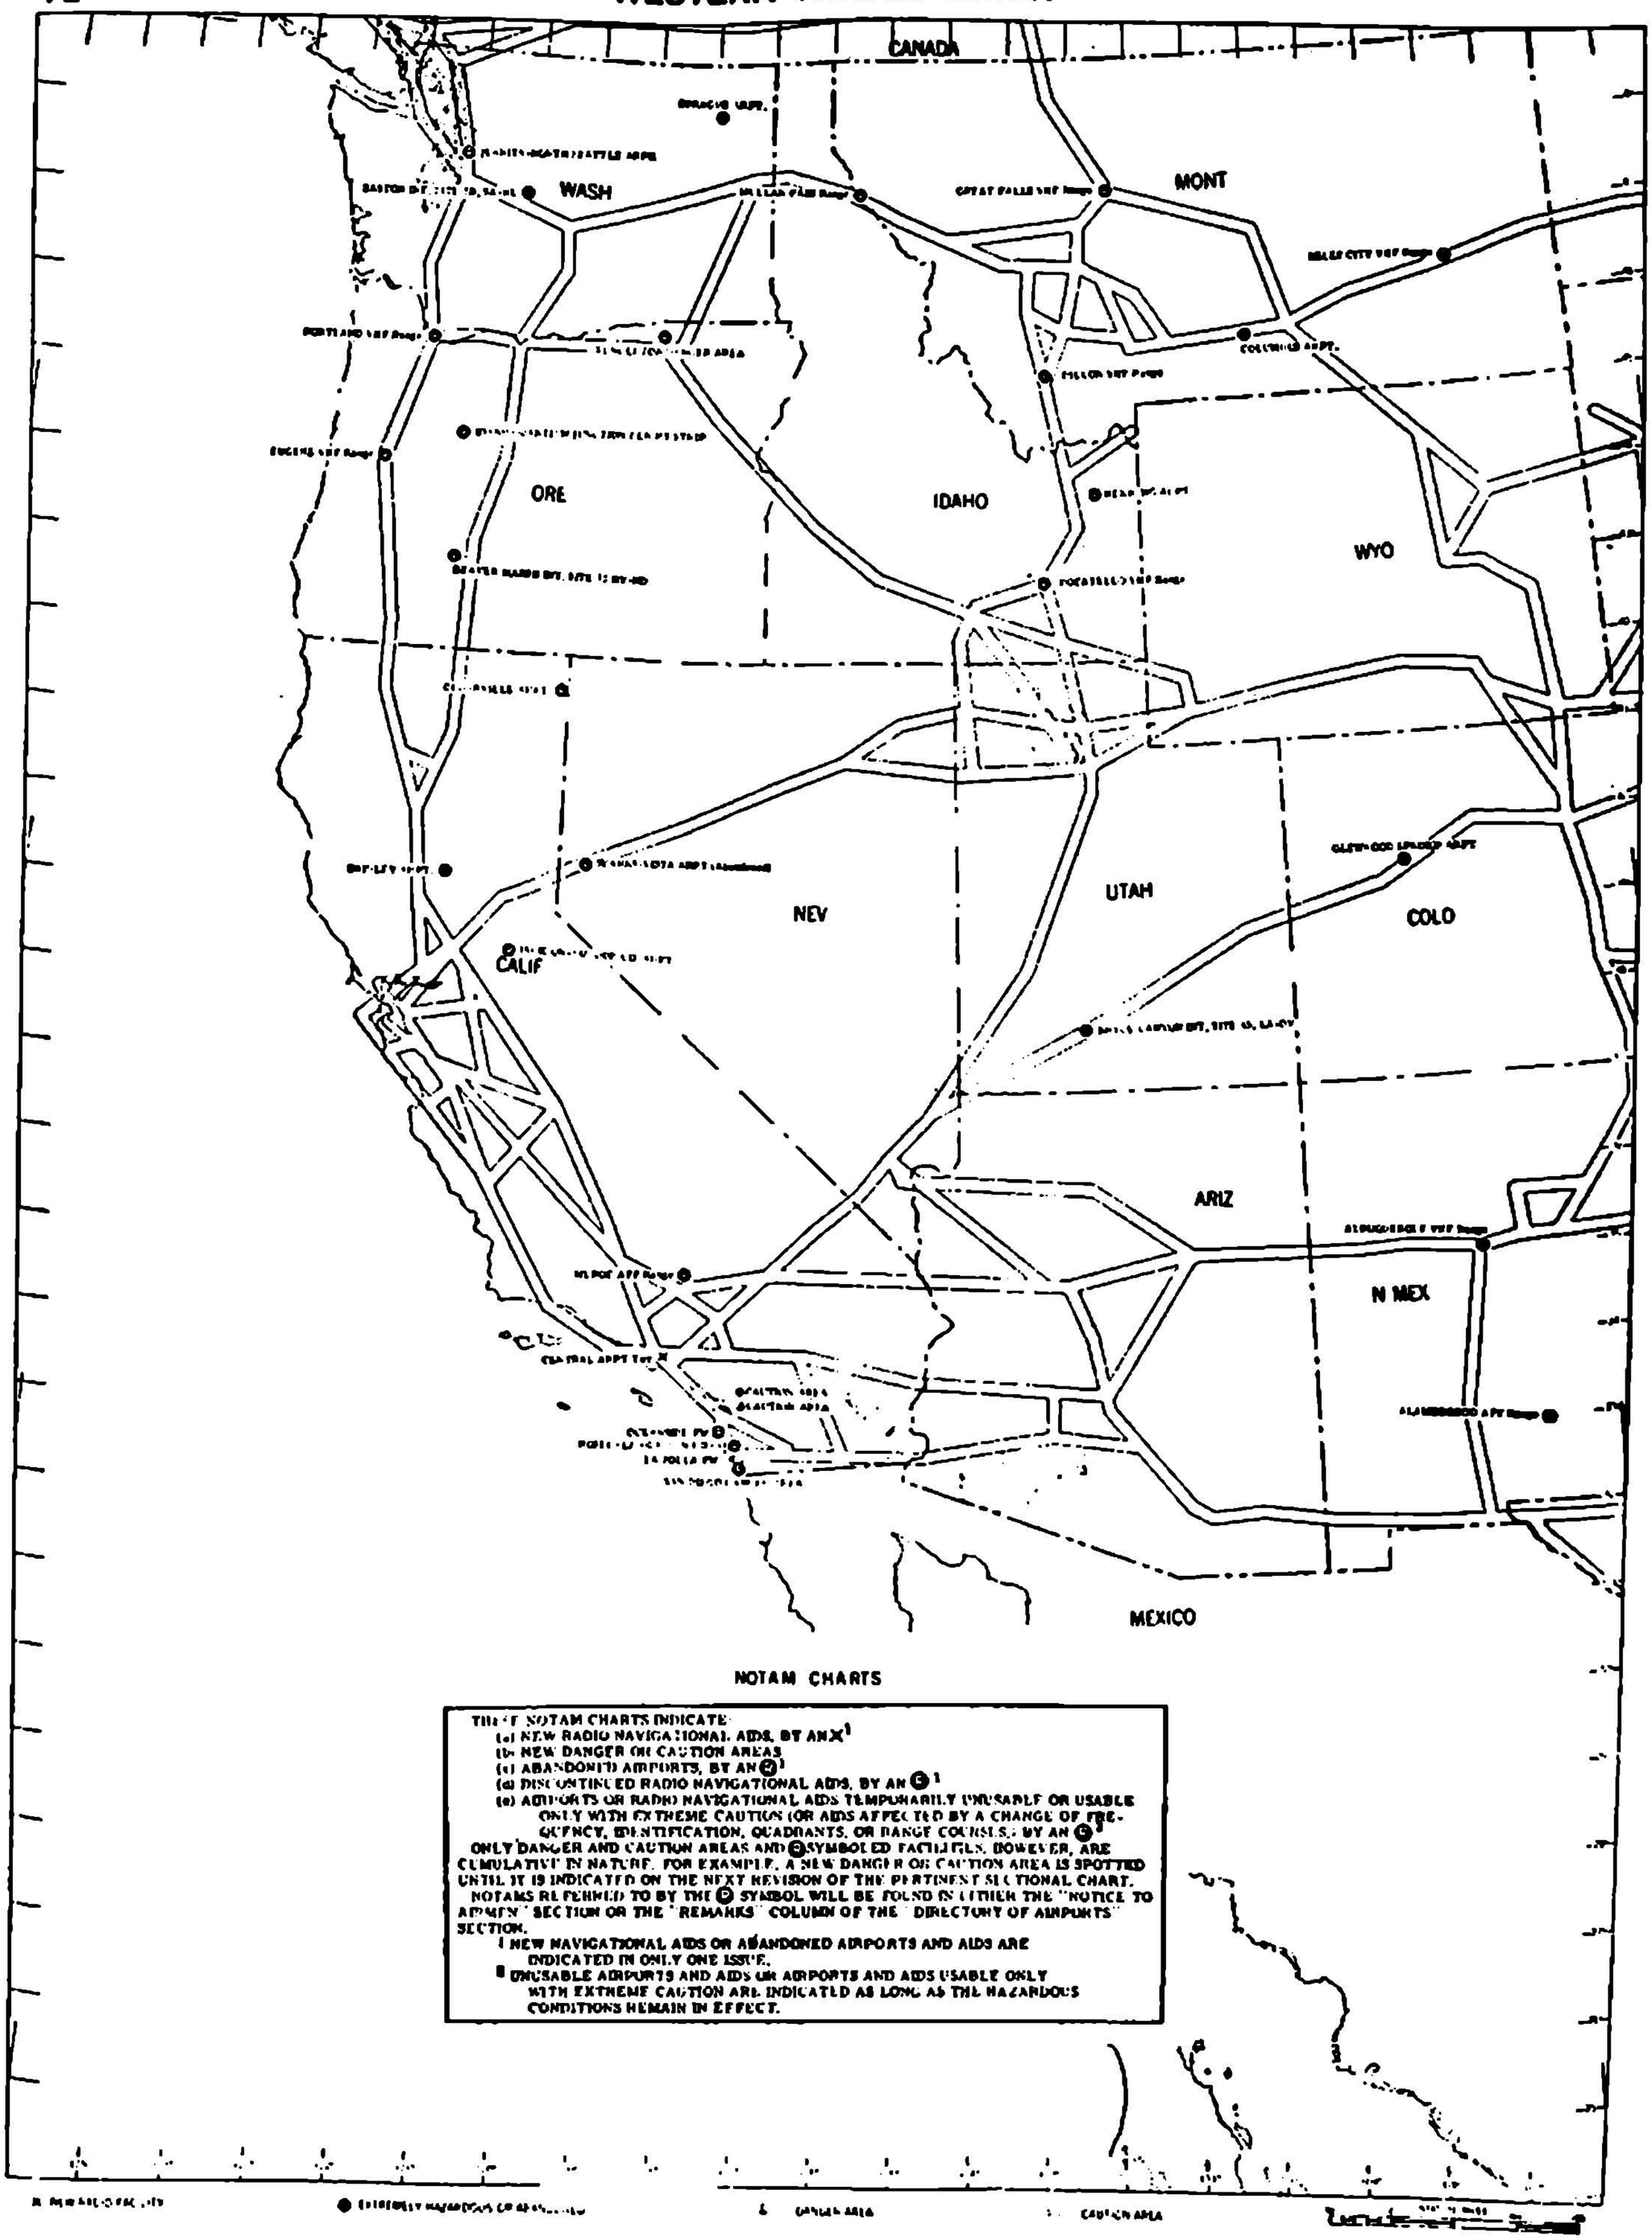
OKANOGAN-LEGION ARPT: Right traffic on WSW take-offs and landings. (11-10)
OLYMPIA ARPT: Rot. bcn flash. green and yellow used to warn lcl and trans acft of approach of scheduled transport acft. Bcn turned on five minutes before arvl and turned off upon arvl and landing of acft. (12-4)
OPPORTUNITY-LEMEN ARPK: Right traffic take-offs and landings to NE. (10-31)
**ORCAS SEAPLANE BASE: Revised data: Lat 48-36-00, long. 122-56-30. (10-7)
OROVILLE-DOROTHY SCOTT ARPT: Right traffic on S take-offs and landings. (11-10)
**PORT ANGELES SEABEE HARBOR SEAPLANE BASE: New base. Lat 48-07-30, long. 123-25-30. (9-23)
PORT TOWNSEND-COUNTY-CITY ARPT: Right traffic E take-offs and landings. (10-21)
PUYALLUP-S & S AIRSTRIP: Right traffic S take-offs and landings. (10-21)
REPUBLIC-FAIRWEATHER FLD: Right traffic NNW landings. All take-offs to SSE. (12-11)
SEATTLE-Univ. of Washington operating a captive balloon for fog research from the N shore of Portage Bay, Seattle, approx midway between Lake Union and Lake Washington along ship canal. Balloon is 6' in diameter unmrkd and unlgtd with an instrument weighing approx 1-1/2 lbs suspended below and secured to launching reel with cutty-hunk line. Balloon released to various alts up to 2000' any time day or ngt during formation and dissipation of fog in this area. (9-12)
SEATTLE-BELLEVUE AIRFLD: Right traffic when landing to S. (10-21)
SEATTLE-BOEING FLD: All unscheduled acft landing at Boeing Fld must register with County Fld Office, except those who have made other arrangements with fld management. Avoid flagged areas. Holes E side main taxiway, N and S of Admin Bldg. Use ctn when taxiing. Dirt strip closed. All acft use main rnwy and make patterns W of fld. No touch-and-go landings for non-rdo equipped acft. (11-21)
**SEATTLE LAKE UNION AIR SERVICE SEAPLANE BASE: New base. Lat 47-38-15, long. 122-20-00. (9-18)
SEATTLE NAS: Single-engine acft approach from Kirkland 1500' descending to 1000' over the stn. Rnwy 14-32 lgtd 30 minutes prior to arvls and dptrs between sunset and sunrise and on req. Tetrahedron lgtd sunset to sunrise. (5-27)
SEATTLE-TACOMA ARPT: Scheduled opers in progress and not avail. for practice landings by trans acft unless acft is equipped with 2-way rdo and are in ctc with Seattle approach control. Equip. on fld. Approach lgt lane will be operated on req and when ceiling of 1000' or less and/or visibility 3 mi or less. (8-28)
SPOKANE-FELTS FLD: Rdo Stn KGA erecting twrs 6 mi SSW (198° true). (11-9) Lgt non-rdo equipped acft use mrkd graded area S of main rnwy. Fancher Bcn near Felts Fld inop. Take-off and land on sod area before reaching taxiway near center of fld. N side rnwy mrkd. Equip. on fld. Tetrahedron uncontrollable-free swinging. Equip.-ditches being dug S of W end of main rnwy. (10-23)
SPOKANE-GEIGER FLD-RADIO: About Feb 10, middle compass lctr will be comm at middle mrkr site 3250' SW of end of rnwy. Freq 219 kcs, ident. "M". Concurrently, CAA ILS will be comm serving Rnwy 2. Lclzr freq on 109.9 mcs with voice and ident "SM" will be lctd 1488' NE of NE/SW rnwy. Glide path will operate on 333.8 mcs. Outer mrkr will be lctd 4.42 mi SW of SW end of rnwy, keyed two dashes per second. Middle mrkr will be lctd 3250' SW of SW end of rnwy, keying alternate dots and dashes. (1-14) FLD: Equip. on

WASHINGTON NE/SW rnwy. Unlgtd lgt lane extends 1500' beyond SW end of NE/SW rnwy. Last pole in lgt lane 20' above rnwy elevation. Glide path mast extends 30' above grnd, obst painted, but unlgtd, lctd 550' NW of NE/SW rnwy and 400' N of E/W rnwy. (1-15)
SPRAGUE ARPT: Entire fld rocky-dangerous. Emerg use only. (10-21)
TACOMA-BARRY'S SKYHARBOR ARPT. Right traffic, W take-offs and landings. (10-21)
TACOMA-CITY VIEW ARPK: Equip. on fld days. 1600' of S end N/S rnwy usable, but rough. (12-2)
TOLEDO-WINLOCK SITE 63B, SF-SA: Sodded portions fld soft. Use rnwy only. (11-19)
TONASKET ARPT: Right traffic SSE take-offs and landings. (12-11)
VANCOUVER-PEARSON AIRPARK: ESE/WNW strip under const. (10-21)
WALLA WALLA AFF: No opers office. (9-3)
WENATCHEE-PANGBORN FLD: Apron and parking areas being enlarged. Equip. on fld. Use taxiways with ctn especially at ngt. (9-16)
WHIDBEY ISLAND NAS-AULT FLD: Bcn operates during IFR and from sunset to sunrise. Warm-up aprons avail. for all rnwys. (4-3)
WEST VIRGINIA CHARLESTON-RADIO: Visual-aural VHF rng in cont oper for test purposes only. Freq 108.7 mcs, ident. "KN".
CHARLESTON-BOLLINGER FLD: Lgts on 240' twr Rdo Stn WKNA 5 mi N inop. (7-28)
★CHARLESTON-KANAWHA CO. ARPT-RADIO: Ctl twr operates 0930 to 1730 daily. (1-7)
FLD: Acft unable to ctc twr should observe lgt signals. Equip. on fld days. (11-9)
CLARKSBURG-PATTON FLD: Right traffic on landings to the S. (8-5)
ELKINS ARPT: Ctc Elkins Rdo or circle fld before landing. (3-14)
PARKERSBURG-RADIO: Visual-aural rng on 109.1 mcs, ident "PV", operating for test purposes only. (9-27)
WESTON-LOUIS BENNETT ARPT: Soft spots after continuous hvy rains. (4-10)
WHEELING-RADIO: Ctn-visual-aural rng unmonitored. (4-9). Freq 108.3 mcs, ident "WN"
WISCONSIN BARABOO-BELL AERO SERVICE ARPT: Ctn wet weather and during thaws.
BUTLER-CURTISS-WRIGHT ARPT: Closed ngts. (7-7) 626' twr Rdo Stn WTMJ-FM being erected atop Richfield Hill (1040' MSL), 12 mi NW (319° true). Temp lgtd during const. Unmrkd long guy wires attached twr. (10-27)
**GRANTSBURG INT, SITE 7, TWIN CITIES-QT: New fld: Lat 45-47-45, long. 92-40-15.
MADISON ARPT: Use rnwys only. Grass area 75' wide adj to rnwys rough, bal of grass areas unsafe, rough. Equip. on fld days. Floodlgts and svcg 0700 to 2300. (1-14)
MADISON-MOREY ARPT: Use strips only. (10-28)
MILWAUKEE-RADIO: Courses aligned by grnd check only. (1-8)
MILWAUKEE-GENERAL MITCHELL FLD: Equip. on fld days. Right turn procedure rstd to locally based acft. All acft land according to tetrahedron unless otherwise instructed by twr. All pilots must register in Admin Bldg upon arvl and dptr. Position lgts must be turned on and operating between sunset and sunrise for all flgts to and from fld. Rdo rcvr rqrd for all locally based acft. New NNE SSW 6700' strip closed. Army twr lctd W side fld closed and should not be confused with CAA twr lctd N side fld. (12-3)
OSHKOSH-WINNEBAGO CO. ARPT: Use only N/S, E/W rnwy during winter. All traffic left hand 600'. (12-17)
PLYMOUTH-CHAPLIN'S ARPK: Only E/W strip avail. (7-7)
SEXTONVILLE-RICHLAND FLYING CLUB INC: N/S strip soft-avoid when wet. (10-9)
SOLON SPRINGS ARPT: CLOSED (snow). (12-2)
THREE LAKES ARPT: Const. (10-23)
TOMAH ARPT: N/S strip soft when wet. (10-8)
WAUKESHA CO. ARPT: Make first turns to left after landing and taxi on right side of rnwys to parking areas. (10-29)
WAUPUN ARPT, new: Soft after hvy rains. (10-14)
WYOMING CASPER AFF: All rnwys unmrkd. (11-17)
CASPER-WARDWELL FLD: Use rnwys, taxi strips only, bal fld rough. 40' unlgtd pole erected at 30 million candle pwr ceilometer projector 1000' N of hangar. (4-8)
CHEYENNE ARPT: Equip. on fld days. Lgtd bldg between E/W rnwy and taxi strip, 1000' from E end. (7-7)
FT. BRIDGER ARPT: Pwr line under const approx 0.3 mi SW of end NE/SW rnwy and approx 30' high, unlgtd. (11-3)
ROCK SPRINGS MUN ARPT: Approach lgt lane operates whenever ceiling of 1000' or less and visibility of 3 mi or less prevails regardless of rnwy to be used and at other times on call. 100' of snow fence 4-1/2' high const 100' W of glide path bldg. Fence runs in a N/S line. N end of fence 350' S of centerline of E/W rnwy. (1-16)
SHERIDAN-RADIO: 116.1 mcs transmitter and rcvr temp inop. (1-12)
SHERIDAN CO. ARPT: N/S rnwy unsafe hvy acft. Taxi strips parallel all rnwys except N/S rnwy and terminate at ramp. Equip. on fld intermittently. Ctc Sheridan rdo for fld lgts. (12-12)

WESTERN NOTAM CHART



NOTAM CHARTS

THESE NOTAM CHARTS INDICATE:

(a) NEW RADIO NAVIGATIONAL AIDS, BY AN X[1]

(b) NEW DANGER OR CAUTION AREAS

(c) ABANDONED AIRPORTS, BY AN (A)[1]

(d) DISCONTINUED RADIO NAVIGATIONAL AIDS, BY AN (D)[1]

(e) AIRPORTS OR RADIO NAVIGATIONAL AIDS TEMPORARILY UNUSABLE OR USABLE ONLY WITH EXTREME CAUTION (OR AIDS AFFECTED BY A CHANGE OF FREQUENCY, IDENTIFICATION, QUADRANTS, OR RANGE COURSES,) BY AN (C)[1]

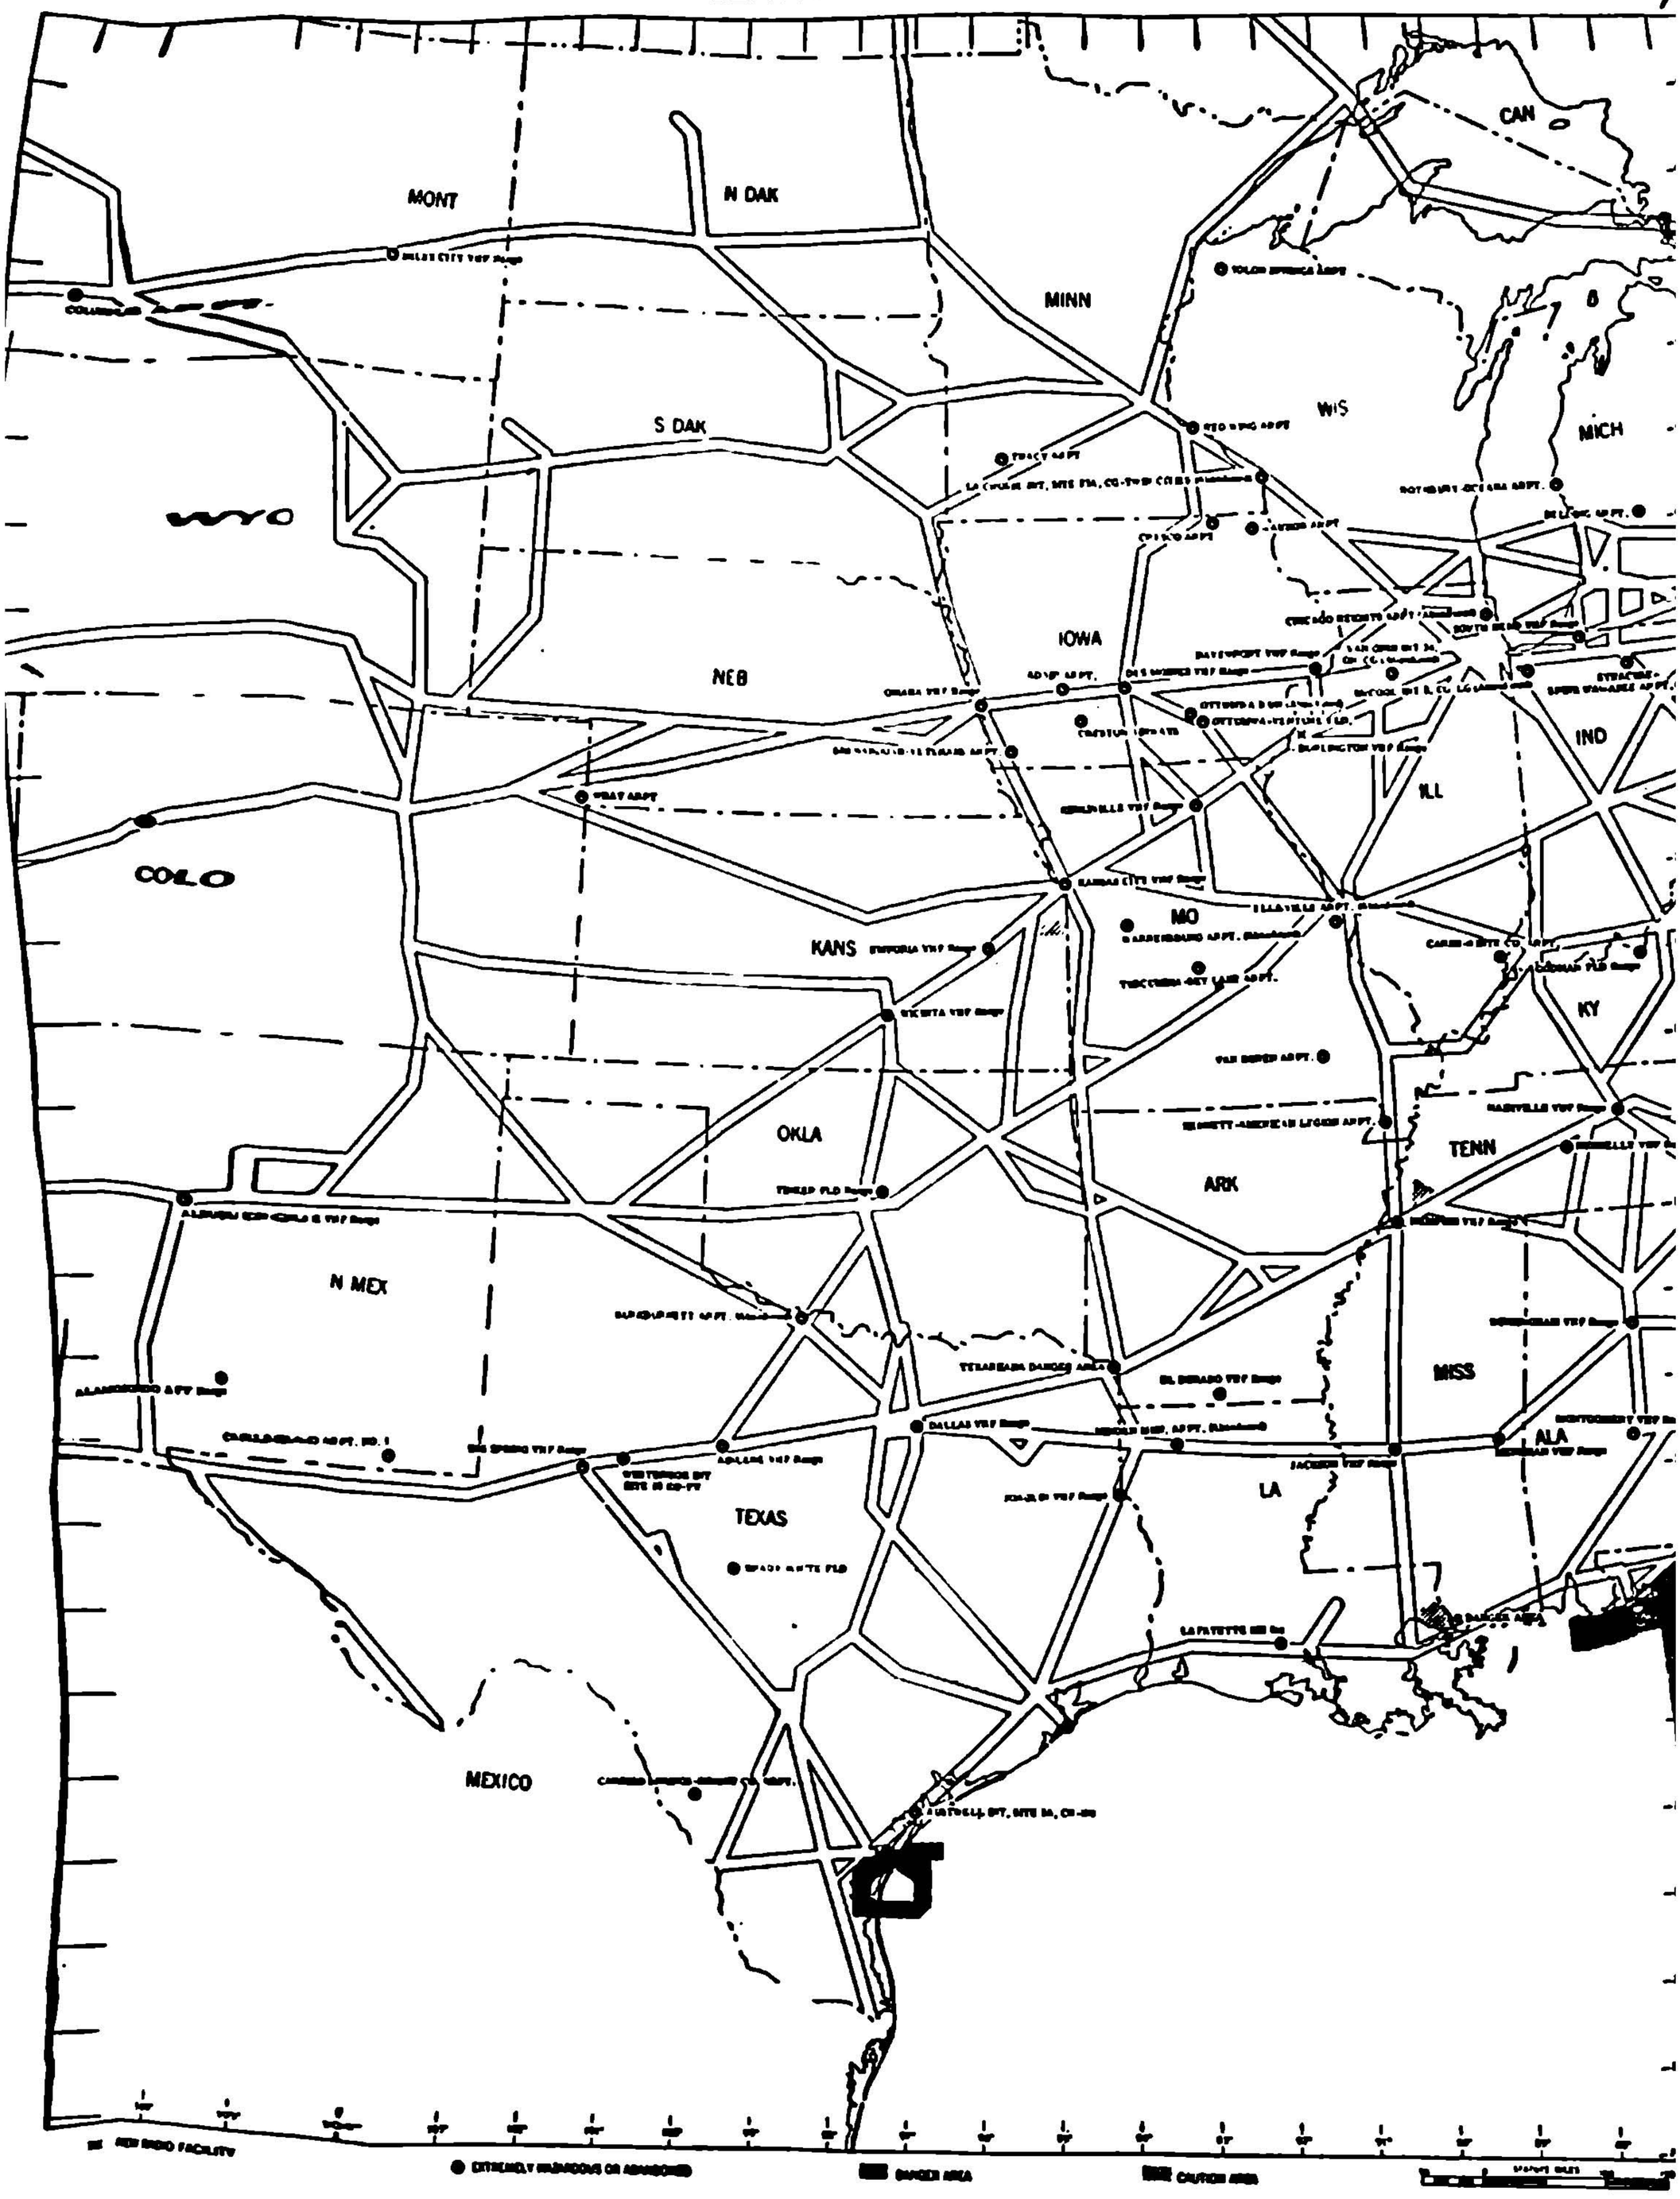
ONLY DANGER AND CAUTION AREAS AND (S) SYMBOLED FACILITIES, HOWEVER, ARE CUMULATIVE IN NATURE. FOR EXAMPLE, A NEW DANGER OR CAUTION AREA IS SPOTTED UNTIL IT IS INDICATED ON THE NEXT REVISION OF THE PERTINENT SECTIONAL CHART.

NOTAMS REFERRED TO BY THE (P) SYMBOL WILL BE FOUND IN EITHER THE "NOTICE TO AIRMEN" SECTION OR THE "REMARKS" COLUMN OF THE "DIRECTORY OF AIRPORTS" SECTION.

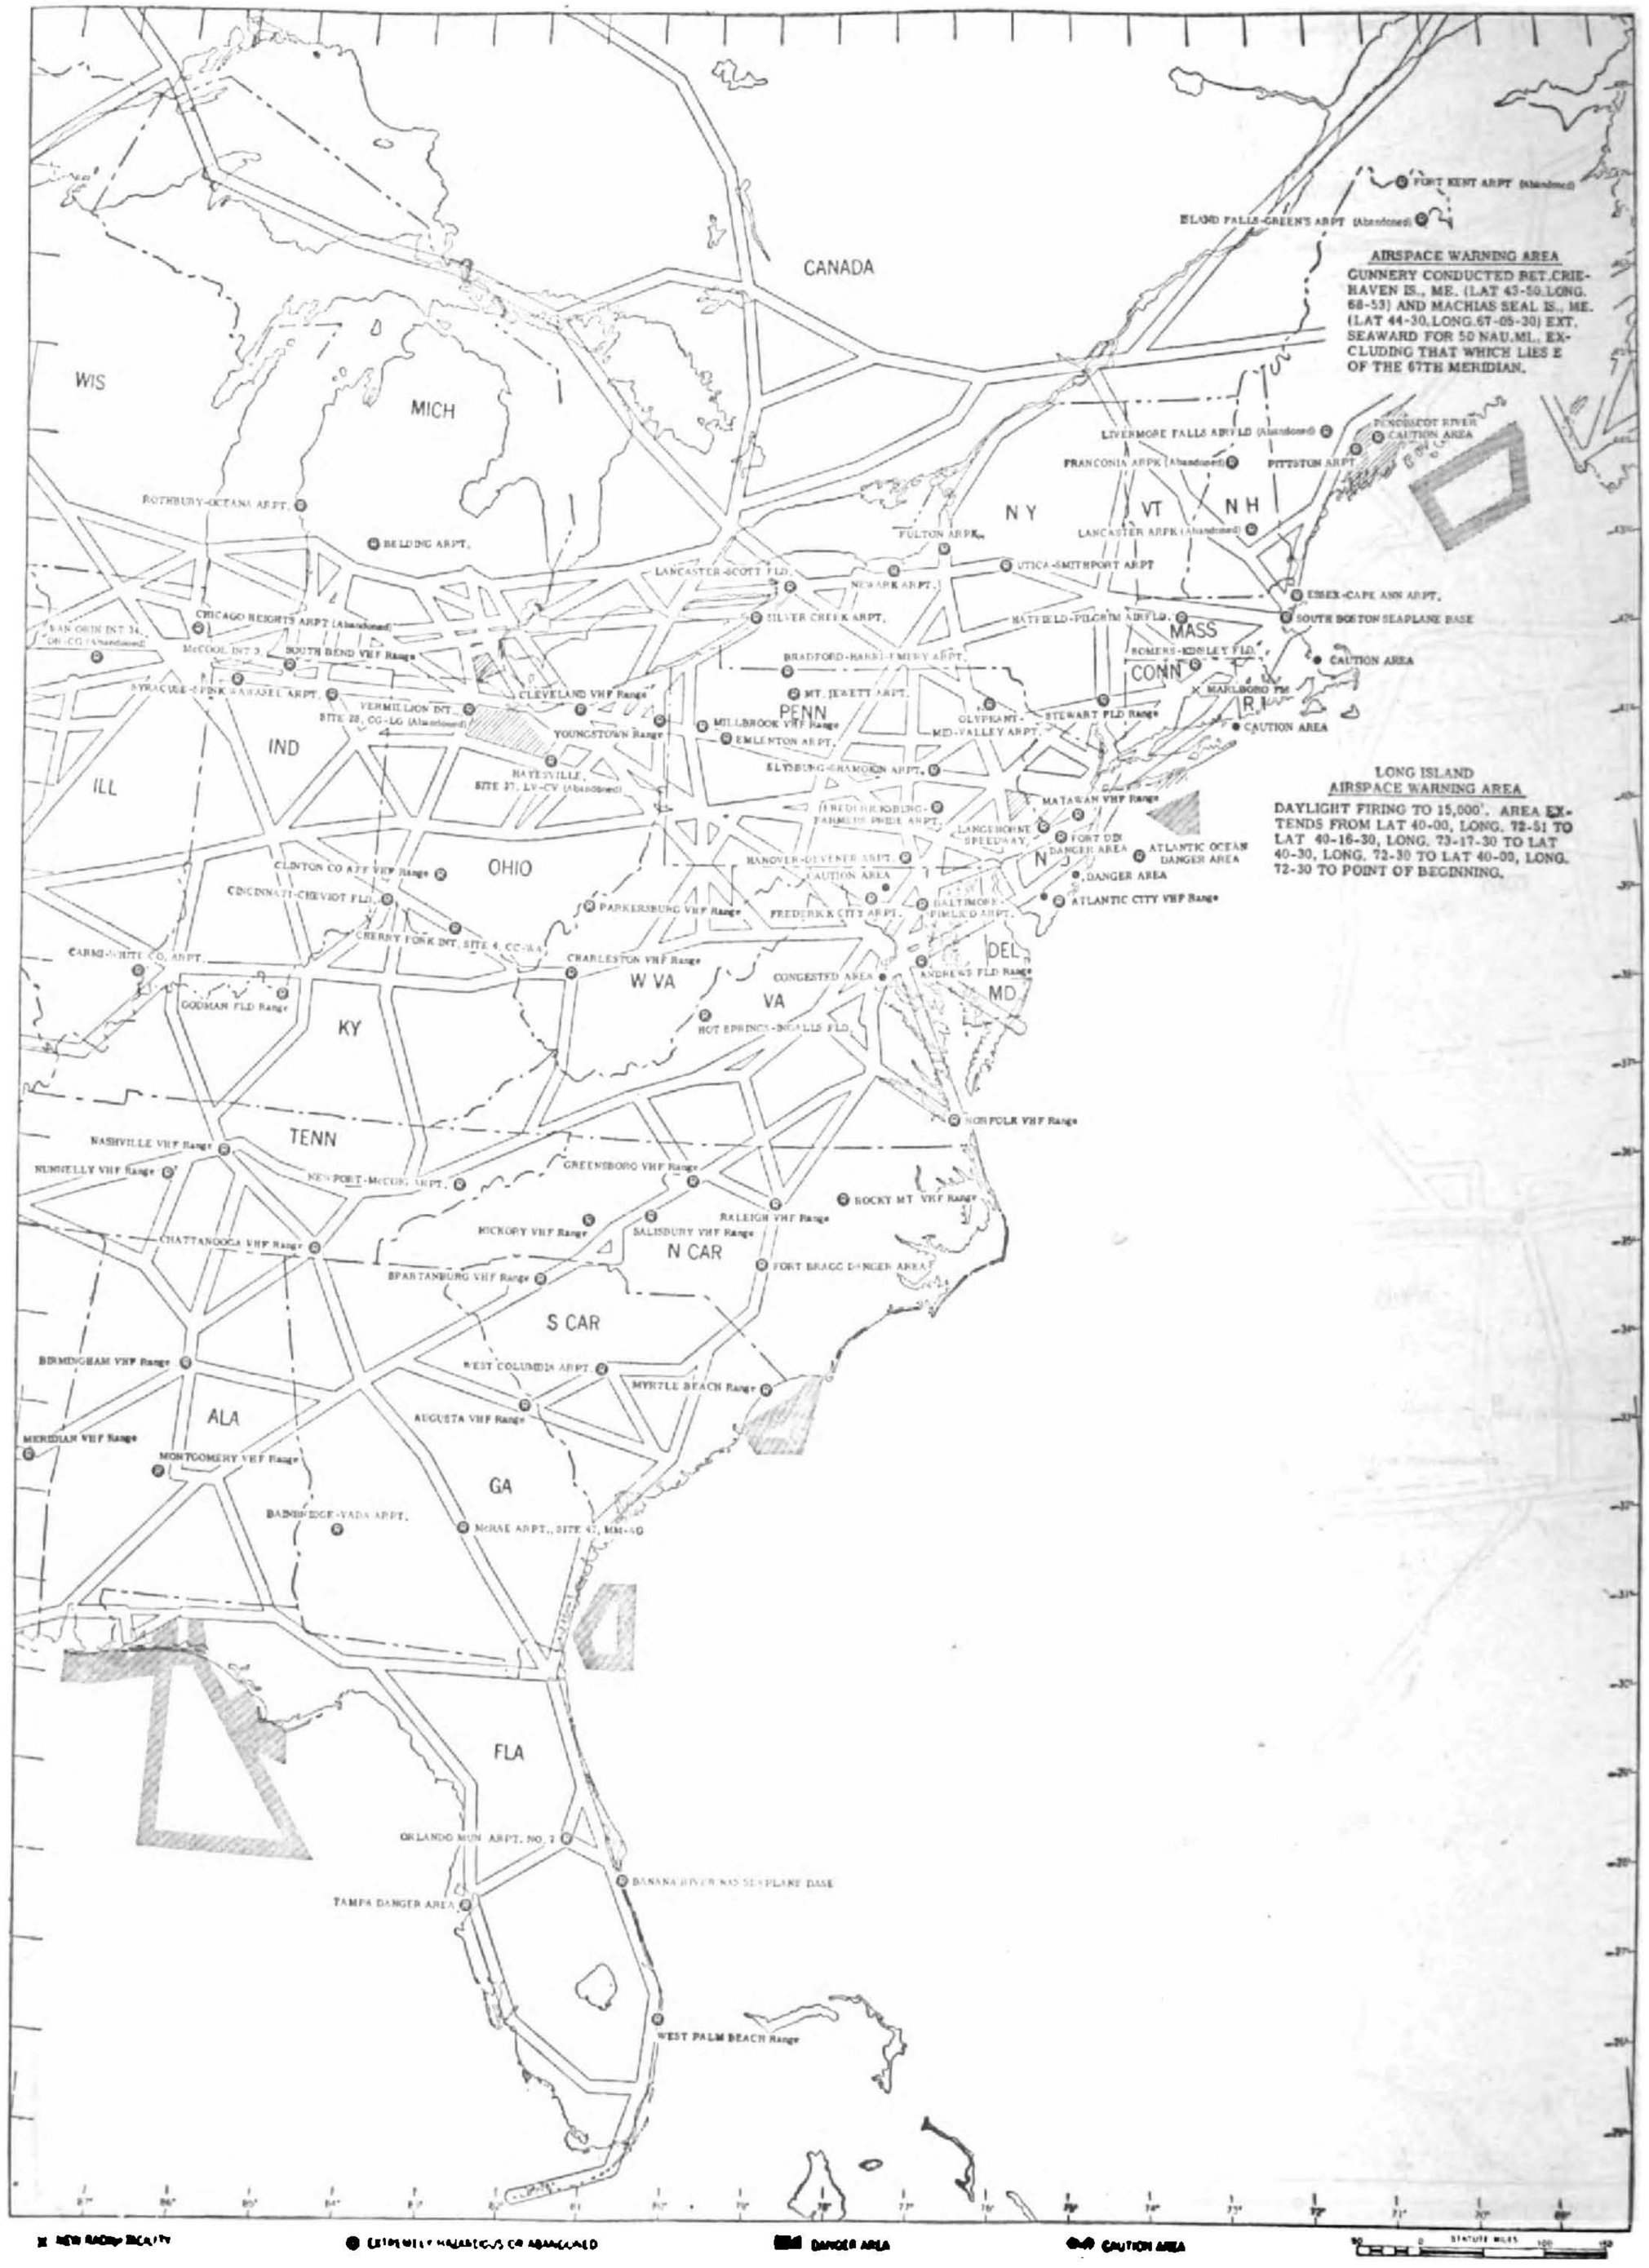
[1] NEW NAVIGATIONAL AIDS OR ABANDONED AIRPORTS AND AIDS ARE INDICATED IN ONLY ONE ISSUE.

[2] UNUSABLE AIRPORTS AND AIDS OR AIRPORTS AND AIDS USABLE ONLY WITH EXTREME CAUTION ARE INDICATED AS LONG AS THE HAZARDOUS CONDITIONS REMAIN IN EFFECT.

CENTRAL NOTAM CHART



EASTERN NOTAM CHART



AERONAUTICAL CHARTS OF THE U. S. COAST AND GEODETIC SURVEY

New editions of the charts listed below will be published in about one month, making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum for immediate requirements. As soon as the charts are available for distribution a second notice will appear in this publication.

Albany	El Paso	New York	21DF
Boston	Lake Huron	WAC 309	Pittsburgh Local
Douglas			

A new edition (or new chart) of the charts listed below which make former prints obsolete is now available for use. Former prints should be destroyed or stamped "OBSOLETE FOR USE IN AVIATION."

NEW EDITIONS

Chicago	December 16, 1947.	FC 221	November 13, 1947.
Des Moines	December 9, 1947.	FC 223	November 20, 1947.
Duluth	December 7, 1947.	AL 339	December 8, 1947.
Green Bay	December 14, 1947.	AL 376	November 10, 1947.
Lake Huron	December 26, 1947.	AL 407	December 5, 1947
Lake Superior	December 5, 1947.	AL 414	December 5, 1947.
Lincoln	December 12, 1947.	AL 472	December 5, 1947.
Milwaukee	December 14, 1947.	AL 500	December 5, 1947.
Twin Cities	December 14, 1947.	AL 513	December 5, 1947.
WAC 307	December 5, 1947.	AL 583	December 10, 1947.
24DF	November 18, 1947.		

When ordering charts from the U. S. Coast and Geodetic Survey, correct remittances should accompany all orders. Sectional charts, price 25 cents each, should be ordered by name; World Air charts, 25 cents each, by number with prefix (WAC); Approach and Landing charts, 5 cents each, by number with the prefix (AL); Flight charts 25 cents each, by number with the prefix (FC); Direction Finding Charts, 40 cents each, by number and with the suffix as in 22 DF; Local Charts, 25 cents each, by name as Miami local; and Obstruction Plans, 40 cents each, by number with the prefix (OP). Consult the monthly Dates of Latest Prints of Instrument Approach and Landing Charts for further information concerning I A & L charts and Obstruction Plans.

SPECIAL NOTICE

AIRSPACE RESERVATIONS: The President of the United States by Executive Order 9925, dated January 17, 1948, created airspace reservations over the Atomic Energy Commission's projects at Oak Ridge, Tennessee; Richland, Washington; and Santa Fe, N. Mex. All aircraft flights over the following described areas except in the interest of national defense or by authority of the U.S. Atomic Energy Commission are prohibited until the aforesaid Executive Order is cancelled:

(a) Clinton Engineering Works, Oak Ridge, Tenn., beginning at lat. 36-00-25, long. 84-07-05; thence to lat. 35-51-35, long. 84-16-25; thence to lat 35-52-10, long. 84-24-15; thence to lat 35-55-45, long. 84-29-30; thence to lat. 36-05-05, long. 84-13-30; thence to lat 36-00-25, long. 84-07-05, point of beginning.

(b) Hanford Engineer Works, Richland, Wash., beginning at lat. 46-33-40, long. 119-13-00; thence to lat. 46-20-00, long. 119-13-13; thence to lat. 46-18-06, long. 119-30-00; thence to lat. 46-26-00, long. 119-47-25; thence to lat. 46-40-45, long. 119-47-28; thence to lat. 46-46-50, long. 119-33-35; thence to lat. 46-46-50, long. 119-28-16; thence to lat. 46-33-40, long. 119-13-00, point of beginning.

(c) Los Alamos Project, Santa Fe, N. Mex., beginning at lat. 36-00-00, long. 106-04-00; thence along the Rio Grande River to lat. 35-45-00, long. 106-15-00; thence to lat. 35-45-00, long. 106-30-00; thence to lat. 36-00-00, long. 106-30-00; thence to lat. 36-00-00, long. 106-04-00, point of beginning.

GCA AVAILABLE: How and Where

GROUND CONTROLLED APPROACH (GCA) AVAILABLE TO CIVIL PILOTS AS WELL AS ARMY AND NAVY: All GCA facilities (Air Force, Navy, or CAA) are available to any plane in emergency. To secure GCA assistance, pilots should call the associated control tower for instructions.

In addition to the working frequencies listed below, Air Force and Navy GCA emergency VHF transmissions are made on 140.58 mcs. Simplex service on 3117.5 kcs will be provided at all Air Force and Navy installations to provide an alternate means of communications for scheduled air carrier aircraft. Army and Navy towers will relay GCA instructions on 200-400 kcs band to civil aircraft not equipped to receive VHF or HF.

A minimum of 30 minutes will generally be required to assemble a GCA crew and prepare the equipment for operation AFTER an alert has been received at those locations not providing continuous service. CAA GCA units, however, operate continuously.

CAA GCA UNITS

DIRECTORY OF AIRPORTS

LEGEND

CITY AND AIRPORT NAME

(When city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport name* (with A in Type column) - Owned or leased totally by U.S. Air Force
(N) " (with N in Type column) - Owned or leased totally by Navy
(CG) " (with CG in Type column) - Owned or leased totally by Coast Guard
(NG) " (with NG in Type column) - Owned or leased totally by National Guard
(A) Airport name - Open to civilians but owned or leased wholly or in part by U.S. Air Force, Air Reserve, U.S. Air Force servicing detachment or contract gas usually available.
(N) " - Open to civilians but owned or leased wholly or in part by Navy
(CG) " - Open to civilians but owned or leased wholly or in part by Coast Guard.
(NG) " - Open to civilians but owned or leased wholly or in part by Army or State Government for Air National Guard. Limited servicing and maintenance for transient military aircraft.
(P) " - Civil airport open to military aircraft. (See Note 2).
* " - C.A.A. Intermediate Field.

* Air Force and Navy fields are listed alphabetically by airport name followed by city name in parenthesis.

N.B. ALL AIRPORTS EXCEPT THOSE CITED WITH AN "A" OR AN "N" IN THE TYPE COLUMN ARE OPEN TO CIVIL FLIERS. AIRPORTS WITH NO PREFIX ARE EXCLUSIVELY CIVIL AIRPORTS.

TYPE

A - U.S. Air Force; I - Intermediate; NG - National Guard
C - Commercial; M - Municipal
CG - Coast Guard; N - Navy; P - Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified.

CLASS

(Non Level Runway and Strip Requirements)

Class	Strip Length	Runway (Paved) Length
B-1	Less than 1800'	Less than 1800'
1	1800-2699'	1800-2499'
2	2700-3699'	2500-3499'
3	3700-4699'	3500-4499'
4	4700-5699'	4500-5499'
5	5700-6699'	5500-6499'
6	6700-7699'	6500-7499'
7	7700-8699'	7500-8499'
8	8700-9699'	8500-9499'
9	9700' +	9500' +

RUNWAYS

In "longest" column is stated length of longest landing area in hundreds of feet.

"h" indicates landing area is hard-surfaced or paved.
"sw" indicates allway field.

No differentiation is made between runways and strips as far as number of landing areas in field is concerned. In other words, two hard-surfaced runways and two sod surfaced strips will be listed as four runways.

FACILITIES AND SERVICING

RADIO

R1: Control tower voice
R2: Range (or H facility) with voice
R3: Range (or H facility) and tower
R4: Range (or H facility), tower, and ILS

LIGHTS

L : Incomplete lighting, such as flood or strip lights, which are generally available only on prior request
L1: Beacon only
L2: Beacon and boundary
L3: Beacon, boundary, and obstruction
L4: Beacon, boundary, obstruction, and flood
L5: Beacon, boundary, obstruction, flood, and runway contact
(L5): Identical to L5 except that runway contact lights are high intensity
L6: Beacon, boundary, obstruction, flood, runway contact, and instrument approach
(L6): Identical to L6 except that instrument approach lights are high intensity

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

S1: Fuel
S2: Fuel, storage
(Any S combination in parenthesis indicates only part time or irregular attendant)
S3: Fuel, storage, minor aircraft repairs
S4: Fuel, storage, minor aircraft, and minor engine repairs
S5: Fuel, storage, major aircraft, and minor engine repairs
S6: Fuel, storage, major aircraft, and major engine repairs

REMARKS

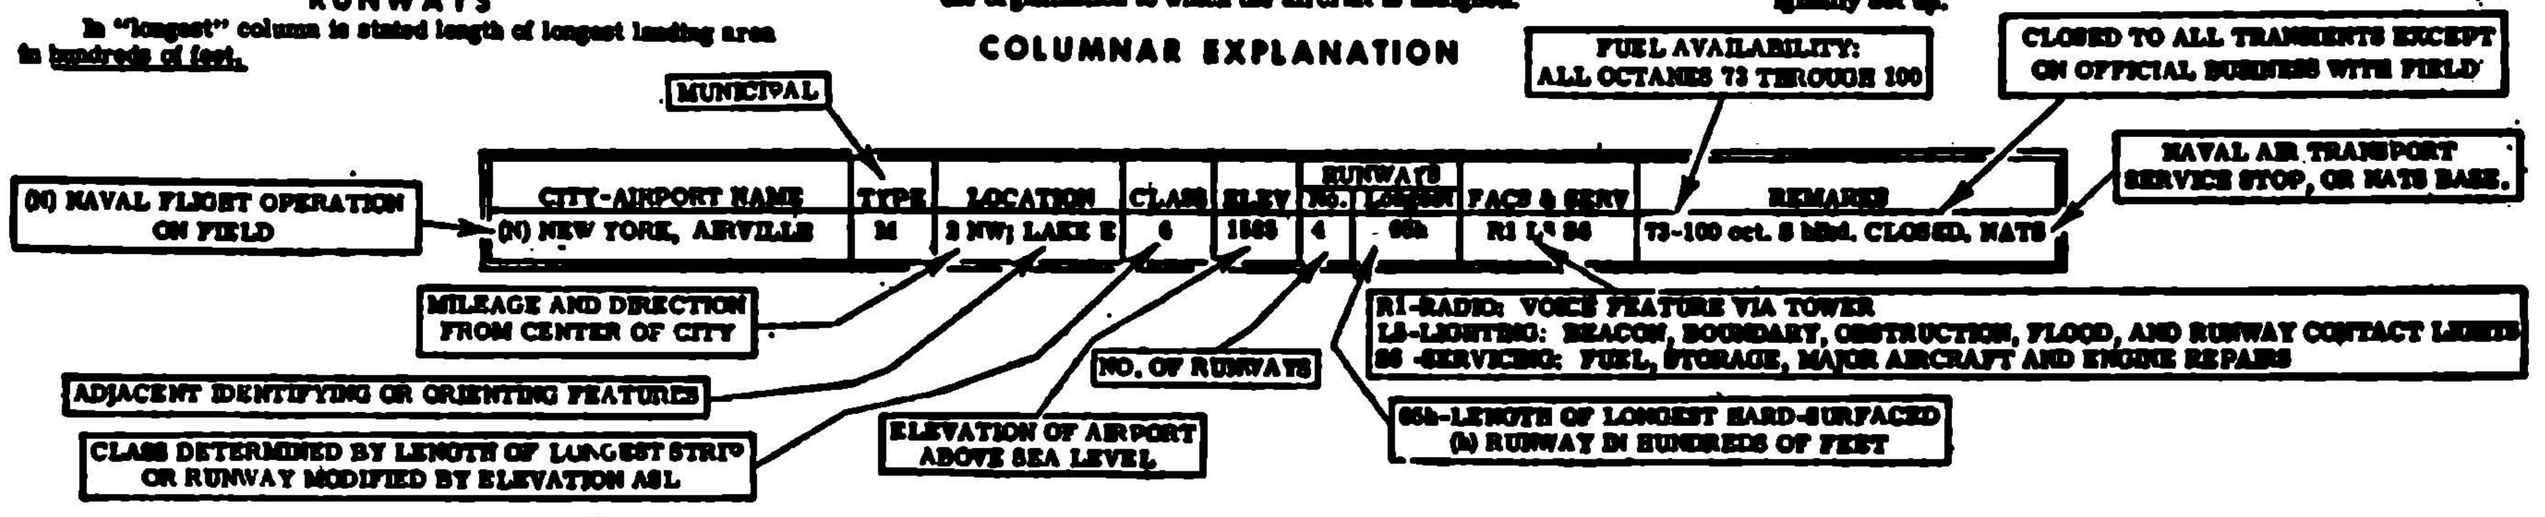
(a) "91 oct." indicates fuel octanes available. "AF", or "Navy", preceding octane indicates USAF or Navy contract fuel available.
(b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency. "CLOSED MIL" and "CLOSED NAVY" on civil fields indicate same restrictions as above are applicable to armed services.
(c) "Port. B-2 lgts" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway, or strips.
(d) "TEMP INACT.NO FACS." indicates USAF airfields used either exclusively by the USAF or municipal airfields used jointly by the USAF and civil interests at which both the USAF and the civil interests are inactive. Such airfields will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the aircraft is assigned.
(e) "USAF TEMP INACT. CIVIL FACS." indicates municipal airfields used jointly by the USAF and civil interests at which the USAF facilities are inactive but civil facilities are available. Such fields may be used by military aircraft, however, only commercial service is available.
(f) OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines within at least a 15-1 glide angle are indicated.
(g) "Fld lights on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly the field lights, indicated for such a lighted field, (and in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.

NOTES

1. ← Notam data revising previous issues.**
2. "(P)" in City and Airport Name column indicates: (1) those municipal airports improved with public funds and covered by an agreement between the municipality and the U.S. Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations, or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the Department of the Army.
3. "*Effingham, 10, L5-ED" in City and Airport Name column indicates that the airport is Effingham CAA Intermediate Field, Site 10 on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the C.A.A. are listed similarly except that there is no prefixed star.
4. AIRLINE STOP airport names are capitalized.
5. PRIVATE AIRPORTS are available for owner only, and not to be used by others except in emergency. Since no servicing is available for transients no "S" combination is ever assigned these fields.
6. "BLKD" indicates approaches where glide angle to runway is 3:1 or less.
7. "(Formerly Army)" or "(Formerly Navy)": These former Army and Navy fields are in the process of being disposed of by the War Assets Administration and Farm Credit Administration. Their type is difficult of determination currently and they should be used with caution as some, unable to be disposed of as airport property, are being diverted to agricultural purposes.

** At the bottom of the second column, under the heading of NEW AIRPORTS, will be found, out of alphabetical alignment, all the new airports tabulated after the type for that page had been originally set up.

COLUMNAR EXPLANATION



AIRPORT NAME ABBREVIATIONS

AFB - U.S. Air Force Base
AFF - U.S. Air Force Field
CGAS - Coast Guard Air Station
LTA - Lighter than Air
MCAS - Marine Corps Air Station
MCAAF - Marine Corps Aux. Air Facility
NAAS - Naval Aux. Air Station
NAF - Naval Air Facility
NAS - Naval Air Station
NPG - Naval Proving Grounds
OLF - Outlying Field (Navy)

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to Commanding General, Air Transport Command, ATTN: Flight Operations Division, A-3. Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over 10 days should be forwarded to the same address for submittal to Chief of Staff, USAF, as required. Restrictions in Air National Guard Fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. That Bureau will forward approved restrictions to the above address for publishing. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration.

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of AF Regulation 55-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant with itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

✓ AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of AF Regulation 60-8 of Aug.28,1947, USAF acft with destinations listed below or returning therefrom to the United States will clear through the stations indicated: AFRICA AND AZORES - Brookley Field, Ala., MacDill Field, Fla., Washington National Airport, D.C., or Westover Field, Mass. ALASKA - McChord Field, Wash., or Great Falls AFF, Mont. BERMUDA - Mitchel Field, N.Y., Brookley Field, Ala., MacDill Field, Fla., Washington National Airport, D.C., Westover Field, Mass., or Fairfield-Suisun AFF, Calif. CANADA - Great Falls AFF, Mont., Brookley Field, Ala., McChord Field, Wash., Washington National Airport, D.C., Selfridge Field, Mich., or Westover Field, Mass. CANAL ZONE, CENTRAL AMERICA, MEXICO AND SOUTH AMERICA - March Field, Calif., MacDill Field, Fla., Kelly Field, Tex., or Brookley Field, Ala. CARIBBEAN - Brookley Field, Ala., Kelly Field, Tex., or MacDill Field, Fla. ENGLAND, GREENLAND, ICELAND, AND NORTH IRELAND - Washington National Airport, D.C., or Westover Field, Mass. NOVA SCOTIA AND NEWFOUNDLAND - Washington National Airport, D.C., Westover Field, Mass., Selfridge Field, Mich., or Brookley Field, Ala. HAWAII - Fairfield-Suisun AFF, Calif. EUROPEAN THEATER - Brookley Field, Ala., MacDill Field, Fla., Washington National Airport, D.C., or Westover Field, Mass.

V.H.F. CHANNEL ASSIGNMENTS: Following are USAF assignments:

CHANNEL	AF FREQUENCY	CHANNEL	AF FREQUENCY
A	116.1	H	134.10
B	126.18	U	108.3
C	137.88	V	108.7
D	140.58	W	109.1
G	137.70		

MINIMUM SAFE ALTITUDES ON AIRWAYS: Under USAF Regulation 60-16 and policy of USAF, minimum safe altitudes for flight along airways will be identical to those established by the Civil Aeronautics Administration. Action is being taken to amend pertinent USAF flight information publications to show these minimums.

IFR CLEARANCE MINIMUMS FOR CIVIL FIELDS: For IFR clearance to civil fields when minimum altitude over field is not shown on let-down chart contained in T.O. 08-15-3 or Pilots Handbook, USAF policy states that the "REGULAR - DAY" minimum as shown in CAA Flight Information Manual will apply. Necessary action is being taken to amend all charts to show the proper minimums.

✓ Indicates new or revised Special Notices

✓ OFFICIAL AIR FORCE FIELD DESIGNATIONS: The official names and designations of Air Force Fields have been changed to new designations by the Department of the Air Force General Orders No. 2, of January 13, 1948. The abbreviation "AFB" is for Air Force Base and the abbreviation "AF Aux." stands for Air Force Auxiliary Field.

✓ CORRECTIONS FOR AND ADDITIONS TO AIR FORCE T.O. 08-15-1: (1) Correct Chart 11, by showing Albany radio frequency as 263 kcs.

(2) Correct page 62, by deleting the asterisk from Alamogordo AFF, N. M., which denotes that the instrument letdown procedure is published in T.O. 08-15-3.

(3) Correct listing under Greenville Airport, by showing the emergency homing beacon at Greenville AFB. This beacon transmits homing signals on 1742 kcs. Transmits and receives on 4495 and 4220 kcs voice. Operates on request to gnd/air station or tower Receives on 272 kcs for liaison between tower and beacon.

(4) Correct page 11, paragraphs relative to minimum safe altitudes, Chart Legend and Information, by revising so as to conform with present policy of using CAA minimums based on an airway width of five miles each side of center line, which policy is outlined by special notice, page 115, of Technical Order.

(5) Correct Canadian Data as follows: Clarification of Canadian Data: Information published regarding discontinuance of guard on 4495 kcs by RCAF units and by Department of Transport radio range stations refer only to those stations within the territorial limits of Canada. For example, it is understood that the RCAF station at Goose Bay, Labrador, will continue to guard 4495 kcs.

The following changes are required by the fact that Canadian control towers as well as ranges no longer guard 4495 kcs. (a) Delete guard on 4495 kcs for the following towers: Rivers, Man.; Edmonton, Alta.; Lethbridge, Alta.; Moncton, N.B.; Montreal, Que.; Rockcliffe; St. Hubert, P.Q.; Toronto, Ont.; (b) Delete guard on 4495 kcs for the following range: Stirling. (c) The following are additional corrections for Canadian Stations: Regina, Sask. , Class: SBRAZ; Porquis Junction, Ont., Add guard: 3117.5 kcs; Broadview, Sask., Class: BRA; Cranbrook, B.C., Class: BRAZ; Sydney, N.S., Distance, station to field: 6.0 mi.; Ottawa, Ont., Weather broadcast: :13 and :43; Wiarton, Ont., Bearing, stn to field: 53 mi. (d) RCAF Gnd/Air Stations are in operation at the following points: 12 Gp HQ Vancouver-CGR - Freqs: 6240,3202.5,4400. Hrs. of operation: Cont. on 4400 kcs, 1600Z to 0100Z on 6240,0100Z to 0800Z on 3202.5 (other times watch opened on 1 hours notice). Edmonton-VXA - Freqs: 3202.5, 6240,4400,5785. Hrs. of operation: Cont. Note - also receives on 4220 and 2912. Rivers-VYJ - Freqs: 3202.5,6240,4400. Hrs. of operation: Daily -1430 to 0600Z. Winnipeg-CHP - Freqs: 3202.5,6240, 4400. Hrs. of operation: Cont. Rockcliffe-CHT - Freqs: 3202.5, 6240, 4400. Hrs. of operation: 1300Z to 2200Z - Mon. - Fri. 1300Z to 1700Z on Sat. Nil-Sunday. (and on request). Dorval VYT (Montreal) - Freqs: 6240, 3202.5, 4400. Hrs. of operation: 1230Z to 0030Z daily (and on request). 10 Gp Hq Halifax-CGQ - Freqs: 3202.5, 6240, 4400. Hrs. of operation: 1300Z to 2030Z - Mon - Fri; 1300Z to 1600Z - Sat. Nil-Sun. (and on request). Goose Bay VYB) - Freqs: 3202.5, 6240, 4400. Hrs. of operation: 1300Z to 2030Z - Mon to Fri. . 1300Z to 1600Z - Sat. Nil-Sunday (and on request).

(e) Page 20, delete control tower guard of 4495 kcs for Patricia Bay, B.C., and Vancouver, B.C. (f) Correct page 12, by changing the radio range frequency for Porquis Junction to 212 kcs.

(6) Correct page 22, by showing Westchester Co. ILS on Channel X instead of Y, and by showing Westchester Co. Approach Control and ILS on page 24 as well as page 22.

(7) Correct page 18, by showing the bearing, station to field for Lewiston as 247°.

(8) Correct page 42, by showing Bartlesville (Phillips Airport) tower transmitting and guarding Channel B on request. Show H under Class of Station.

(9) Correct page 10, by showing Presque Isle AFB, Me. control tower as receiving but not transmitting on Channel A. Delete from remarks column: "on request through tower".

(10) Correct GCA data, pages 86 and 87 as follows: (a) by showing the hours of operation of Andrews AFB as Cont. during IFR; 0600-1700 Mon. thru Sat., 30 min. req. other hrs. (b) by showing VHF communications channels as A-B-C-D-G-H for Scott AFB. (c) by showing the hrs. of operation for Scott AFB as "Cont during daylight IFR***", rather than Cont. during IFR***.

(11) Correct page 8, by deleting for Presque Isle AFB the words: "AAF localizer"; facility has not been discontinued, but is operated by CAA, and is considered a low powered radio range rather than a localizer.

(12) Correct page 73, by showing Hartly as the intersection of the E course of Baltimore radio range and the SW course of Millville radio range.

(13) Correct page 81, Pilot Procedures with Flight Service, Using USAF Military Flight Service Communications System (Plan 62), by correcting paragraph 12 to show Wright Flight Service Center as Wright-Patterson Field Service Center, Dayton, Ohio, and by showing Ft. Worth Flight Service Center as Griffiss Flight Service Center, Ft. Worth, Texas.

(14) Correct page 84, Grenier AFB, N.H., by showing Gnd/air station CW HF as guarding 11,445 kcs on request only.

✓ CORRECTIONS AND ADDITIONS TO AIR FORCE T.O. 08-15-3: (1) Correct page 55, under procedure for Olmsted Field, Pa., by deleting Carlisle FM, and by showing New Kingston FM on W leg 10.6 mi. from range station.

(2) Correct page 4, under Abilene instrument approach procedure, by showing the correct code identification as: AP(. - . - - .)

(3) Correct the following Instrument Approach Procedure Charts as follows: (a) Davis Monthan AFB (Tucson), Ariz.: Distance, Rng Stn to field: 3.2; Field Elev.: 2626'.

(b) Stout Field (Indianapolis), Ind.: Field Elev.: 714'.

(c) Hill AFB (Ogden), Utah: Dist. Rng Stn to field: 8.0; Altitude over Rng Stn on final approach: 5788'.

(d) Wright-Patterson AFB (Dayton), Ohio: Field Elev.: 819'.

(e) Walker AFB (Formerly Roswell AAF) (Roswell), N.M.: Fld Elev.: 3664'.

(f) Wendover AFB (Wendover), Utah: Dist, Rng Stn to field: 2.5. (This also corrects T.O. 08-15-1).

✓ CORRECTIONS FOR AIR FORCE T.O. 08-15-2: Correct page 32, AN/CPN-6 (YM) Beacons (X-Band) Domestic, West Palm Beach, Fla., by showing operating hours as cont.

✓ CORRECTIONS AND ADDITIONS TO PILOT'S HANDBOOK, UNITED STATES:

(1) Lockbourne AFB (Columbus), Ohio: Distance, Rng Stn to field: 11.5.

(2) Andrews AFB (Camp Springs), Md.: Distance, Rng Stn to field: 1.2.

(3) Lowry AFB (Denver), Colo.. Min. alt. over field: 5820'.

(4) Langley AFB (Hampton), Va.: Min. alt. over field: 500'.

(5) MacDill AFB (Tampa), Fla.: Min. alt. over field: 500'.

(6) Stout Field (Indianapolis), Ind.: Distance, Radio Stn to field: 6.5

(7) Wright-Patterson AFB (Dayton), Ohio: Min. alt over field: 1300'.

(8) Walker AFB (Formerly Roswell AAF) (Roswell), N.M. Procedure turn altitude: 6000'; Field Elev.: 3664'.

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators No. 9, July 29, 1946, Hydrographic Office information concerning naval and marine corps air stations and facilities, including changes in field facilities, operation rules, air/ground communications facilities, instrument approach procedures and navigational aids, should be directed to: The Division of Air Navigation, Hydrographic Office, Washington 25, D.C., for transmittal to the Civil Aeronautics Administration.

In accordance with Aviation Circular Letter No. 96-46 of June 13, 1946, approval for the closing of any naval or marine corps air station or facility to transient military aircraft for a period in excess of 10 days must be obtained from the Chief of Naval Operations. Also, approval is to be obtained from the Chief of Naval Operations before relocation or modification of any aid to air navigation, such as reorientation of radio ranges.

V.H.F. CHANNEL ASSIGNMENTS: Following are Navy assignments:

CHANNEL	NAVY FREQUENCY	CHANNEL	NAVY FREQUENCY
1	116.1	6	134.64
2	142.56	7	143.64
3	126.18	8	142.02
4	128.70	9	142.74
5	143.28	GUARD	140.58

✓ RESTRICTIONS ON NAVAL AIRCRAFT AT LA GUARDIA FIELD, NEW YORK INTERNATIONAL AIRPORT, AND NEWARK AIRPORT: La Guardia Field, N.Y., New York International Airport, N.Y., and Newark Airport, N.J., closed to all Naval air traffic except that involving urgent official business which cannot be properly handled by landing at Floyd Bennett Field.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout, servicing, lighting, or permanent obstructions of existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or constructions, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids, however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airways Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide.

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA District Airport Engineer for coordination before they are included in the Airman's Guide.

DIRECTORY OF AIRPORT NOTAMS: Because of space limitations, the airport directory perforce serves as a notam supplement. Notam data revising previous directory issues are indicated by prefixed arrows. The only airport data (other than temporary conditions) carried in the Notices to Airmen section are coordinates (latitude and longitude).

AIR RESCUE SERVICE: Headquarters, Air Rescue Service, Air Transport Command, USAF, has issued the following memorandum to all civil pilots: "Air Rescue Service is one of the services of the Air Transport Command, U.S. Air Force. Although it is military, its aid is available to you 24 hours per day in all parts of the United States. Its equipment is such that once it is alerted, besides conducting a search for you, it can furnish you aid by parachuting doctors to your assistance, if immediate medical aid is needed, and by employing specially equipped ground parties which can traverse any terrain to reach you.

"With your help, this specialized equipment and personnel can more effectively come to your aid. Too often when you are reported missing, valuable time is lost in searching for you and bringing aid to you because Air Rescue Service has no idea of your whereabouts, or there are too many probable areas in which to conduct the search. Thus, you are deprived of expert rescue facilities during the critical period following your misfortune. The simplest way to overcome this biggest disadvantage to you is to file a flight plan with Civil Aeronautics Administration, regardless of the weather along your proposed flight path. If CAA facilities are not available, leave a flight plan with a responsible party at the point of departure. This flight plan should include your name, aircraft type and number, your route, your destination, and when you propose to land there (see part 60, Civil Air Regulations). Two things to remember about a flight plan: Once you file it, follow it! When you land, close it with the nearest CAA Communications Station! If you do these things, there is less change of your becoming an incident, either "actual" or "false". By failing to close your flight plan, you will become a false incident and my thus deprive someone who really needs assistance from getting it.

"In order to become more fully informed about the work of Air Rescue Service and how it can help you in distress, you are invited to visit the nearest Air Rescue Service unit and get acquainted."

CIVIL USAGE OF MILITARY FIELDS: USAF and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

REISSUANCE OF EXPIRED PILOT CERTIFICATES: 20.550 Reissuance. Any person who on June 30, 1947, held a valid private or commercial certificate and who failed to exchange such certificate in accordance with Section 20.55 of the Civil Air Regulations, may, notwithstanding such failure and without other showing, obtain a pilot certificate with appropriate ratings upon application to the Administrator.

PERSONAL POSSESSION OF PILOT CERTIFICATE: No person shall pilot a civil aircraft within the United States unless he holds a valid pilot certificate with appropriate ratings issued by the Administrator or an appropriate and valid foreign pilot certificate. Such certificate shall be in the personal possession of the pilot at all times while piloting aircraft and shall be presented for examination to any inspector of the Administration or state or local law enforcement officer upon the request of such inspector or enforcement officer.

DUPLICATE AIRMAN CERTIFICATE AND RATING RECORD FEE: The fee for duplication of an airman certificate and rating record which has been lost, mutilated or destroyed is now one dollar. All airmen should be guided accordingly when making remittance for duplicates. The notation on the reverse side of the airman certificate and rating record form stipulating a fee other than one dollar for both certificate and rating record is to be disregarded. In future reprints of the form, the notation will be revised to indicate one dollar for duplication.

Duplicate medical certificates are issued only at the discretion of the examining physician. Requests for such duplicate certificates should, therefore, be made directly to the physician who performed the examination.

RADIO TELEPHONE-OPERATION AUTHORIZATION: This is the simple way in which an authorization to operate a radio telephone transmitter in an aircraft is obtained: the applicant appears in any of the Federal Communications Commission field offices, or before any CAA flight examiner of the CAA, who has been designated by the FCC to issue the permits, proves he is a U.S. citizen, that he has need of such authorization, and that he understands the few simple rules and regulations. He is given a card granting the authorization then and there.

FCC offices are listed under U.S. Government in phone books, and there are some 30 of them throughout the country. Mostly, they are in downtown offices. There are more than 1,000 CAA designated flight examiners. Mostly they are located at airports.

The "examination", if it may be so described, consists of a few questions establishing the ability of the applicant to transmit and understand spoken messages in English, and to understand the simple rules governing the use of such equipment. He is also given simple, printed instructions for its use.

NOTICE TO ALL FLYING PERSONNEL: Because of the increase in aircraft operations, both civil and military, in recent months, the number of complaints regarding airplane noise nuisance has reached such proportions that the advancement of aviation and development of new airports are in danger of being severely retarded.

To reduce the number of such complaints, it is requested that the following practices be put into effect by all fliers:

1. Discontinue all unnecessary low flying.
2. When weather and traffic volume permit, increase altitudes of all traffic patterns that require flight over inhabited areas.
3. Re-route channels of approach and departure to avoid residential and business districts whenever possible.
4. If the airport is located near inhabited areas, reduce power and increase pitch of propellers as quickly as possible during take-off so as to keep engine and propeller noises at a minimum.
5. Keep rpm's set at a minimum required operational setting when low flying over populated areas is necessary.

SEAPLANE OPERATIONS: Because of the possibility of local ordinances or restrictions prohibiting seaplane operations in resort or congested areas, the Administrator has issued the following advice to seaplane operators:

"1. Take off as far out from the shore as possible.
2. Cut the take off run as short as safety permits.
3. Fly high enough to avoid criticism from residents below, or arrange the flight plan so that you pass over as few houses as possible.
4. Avoid unnecessary 'gunning' or racing of the engine.
5. Explain carefully to those who complain what you are doing to make your airplane a good neighbor.

"In the CAA-Federal-Aid Airport program, we are promoting the use of seaplanes by assisting communities in establishing inexpensive docking and servicing facilities. In view of the high utility value of the seaplane or amphibian, we believe this to be a definite step in the advancement of personal flying in general. Hence, if we are to find acceptance of such facilities, it is up to those pilots who now operate seaplanes to assist us to the utmost by safe and considerate operation of their aircraft."

N.B. The Administrator's admonition was occasioned by numerous complaints received from lake-side residents and vacationists.

SEAPLANE BASE DIRECTORY: A new Seaplane Base Directory dated December 1, 1947, has gone to press. It is being mailed to all seaplane owners and bases. Owners or base operators who are not already on the mailing list, may secure it upon request to the Office of Aviation Information, Attention: A-258, C.A.A., Department of Commerce, Washington 25, D.C.

USE OF AIRPORT UTILITY FREQUENCIES - 121.9 AND 121.7 MCS: The airport ground control frequencies of 121.9 mcs (standard civil channel) and 121.7 mcs (alternate channel) are provided to eliminate the frequency congestion caused by numerous radio contacts between the tower and taxiing aircraft and the tower and airport utility vehicles thus providing a clear VHF channel for arriving and departing aircraft. The ground control frequency is used for the issuance of taxi information, clearances, and any other contacts between the tower and aircraft or vehicles operating on the airport.

Landing aircraft should guard the appropriate ground control frequency (normally 121.9 mcs) as soon as the aircraft has cleared the active runway.. At locations where a ground control frequency is not available or the aircraft is not equipped with the VHF ground control channel, the tower will handle all transmissions to aircraft on the ground over its low frequency channel (278 kcs or equivalent). Departing aircraft should communicate with the

control tower on the appropriate ground control channel (121.9 or 121.7 mcs) for taxi and clearance information and should remain tuned to that frequency until the pilot is ready to request take-off clearance. At that time, the pilot should communicate with the tower on the appropriate airborne VHF channel. Further communication with the tower, if necessary, should be made on the latter frequency. Aircraft not VHF equipped should guard the tower low frequency channel (278 kcs or equivalent) for taxi information and take-off clearance.

V.H.F. IFR FLIGHTS: Until further notice; Air Traffic Control will be exercised on the assumption that aircraft are utilizing intermediate frequency radio ranges. If a pilot desires to conduct IFR flight using VHF ranges over all or a portion of the route, his flight plan should so indicate. Further, flights should not be conducted on civil airways in IFR weather using VHF ranges unless the ATC clearances so authorize.

PRIVATE FLIER VHF FREQUENCIES: CAA Communications Stations and Towers guard the private flier frequencies of 122.1 mcs for transmission to CAA Communications Stations and 122.5 mcs for transmission to CAA operated towers.

CAA Communications Stations normally reply to itinerant aircraft on the voice feature of the range, low frequency or VHF, whichever is applicable. Replies are made on 111.1 mcs if VHF reply has been requested on other than range frequency. CAA airport control towers will reply to itinerant aircraft on one of the frequencies 118.3, 118.5, 118.7, or 118.9 mcs, in addition to towers' low frequencies.

RADIOTELEPHONE COMMUNICATIONS: The word ROGER in radiotelephone communications means "I have received all of your last transmission", and its use in any other sense by CAA stations and towers is not authorized. In order to avoid confusion it is suggested that pilots engaging in air-ground contacts also limit the use of ROGER to acknowledgment of transmissions.

Pilots enroute are requested to avoid, if possible, calling airway communications stations at or about 15 and 45 minutes past the hour (which are the scheduled broadcast times) to request weather information, as such calls may delay starting of scheduled broadcasts and cause inconvenience to other persons who are dependent on the broadcasts for weather reports.

VISUAL-AURAL RANGE (VAR MONITORING): Only visual courses of VAR facilities are monitored continuously.

CANADIAN AIRWAY DESIGNATIONS: (1) Red Airway #10. In order to avoid altitude conflictions between flights at the point of intersection of Blue Airway #10 and Blue Airway #50, Blue Airway #10 was redesignated as Red Airway #10.

(2) Red Airway #21. The airspace over Canadian Territory within 5 miles either side of the SE course of Romulus, Mich. range has been designated as part of Red Airway #21. Traffic control jurisdiction will fall under the Detroit A.T.C. Centre.

✓ DESIGNATIONS OF NON-COMPULSORY REPORTING POINTS: The following radio fixes have been designated as non-compulsory reporting points:

(1) Riverdale - Intersection of the NE course of Washington and the NW course of Brandywine radio ranges.

(2) McLean - Intersection of the NW course of Washington and the NE course of Quantico radio ranges.

(3) Springfield - Intersection of the NE course of Quantico and the SE course of Arcola radio ranges.

(4) Charlotte Hall - Intersection of the SE course of Brandywine and the SE course of Arcola radio ranges.

(5) Ashburn - Intersection of the NW course of Arcola and the E course of Front Royal radio ranges.

(6) Huntingtown - Intersection of the SE course of Washington and the S course of Baltimore radio ranges.

(7) Loch Raven - Intersection of the NE course of Washington and the N course of Baltimore radio ranges. (Formerly North Baltimore).

(8) Stewart Field, N.Y. radio range.

✓ DELETION OF NON-COMPULSORY REPORTING POINT: Intersection of the SE course of Morgantown and the W course of Front Royal radio ranges has been abolished as a non-compulsory reporting point

---

✓ AMENDMENTS TO PUBLISHED MINIMUM ENROUTE INSTRUMENT ALTITUDES: Correct Minimum Enroute Altitudes, carried in the Flight Information Manual, Vol. 2, No. 2, dated January 1, 1948, as follows:

Airway:		From:		To:		Alt.:	
Green 6		Alice		Corpus Christi		1500'	
"	Amber 1	"	Redding (FM)	"	Ft. Jones	"	11,000'
"	Amber 2	"	Long Beach	"	LaHabra (Int)	"	3000'
		"	LaHabra (Int)	"	Daggett	"	12,000'
		"	Silver Lake	"	Las Vegas	"	9500'
"	Red 56	"	Delta (Int)	"	Whitmore	"	8000'
"	Red 58	"	Salinas	"	Hollister (Int)	"	6000'
"	Red 60	"	Int. NW course Salinas and SW course Moffett	"	Moffett	"	5000'
"	Blue 14	"	Los Banos (Int.)	"	Stockton	"	3000'
		"	Stockton	"	Int. N course Stockton and SE course Sacramento	"	3000'
"	Blue 51	"	Int. E course Wendover and S course Lucin	"	Lucin	"	12,000'
		"	Lucin	"	Goosecreek (Int)	"	12,000'
"	Blue 52	"	Int. SE course Salinas and SW course Fresno	"	Fresno	"	7000'
Direct Route - SW U.S.		"	Mirage Lake (Int), Calif.	"	Summit (Int), Calif.	"	12,000'

WEATHER REPORTING SERVICE

Weather Reporting Location	Type of Report	Lat.. Long.	Elev.	Action Taken
Pt. Huenemie, Calif.	3-hourly			Discontinued
Pt. Fermin, Calif.	3-hourly			Discontinued
Lovelock, Nev. (Derby Fld)	6-hourly	40-04, 118-33	3900	Begun
Concord, Calif. (Buchanan Airport)	SW	37-59, 122-04	23	Inaugurated
Islip, N.Y. (McArthur Arpt)	SW	40-48, 73-06	98	Inaugurated

NOTE: Terminal forecasts inaugurated for Lewiston, Idaho.

✓ AERONAUTICAL CHART AND PUBLICATION CORRECTIONS: (1) Correct Mobile Sectional Aeronautical Chart, dated Aug. 15, 1947, by showing MRAZ radio range at Tyndall Field, Fla., on 203 kcs; Ident. "DKE"; Courses: 133°,223°,313°,43°.

(2) Correct Flight Information Manual, Vol. 2, No. 2, dated January 1, 1948, as follows: (a) Chapter VII, Standard Broadcast Stations, page 87, by showing the correct latitude of Hartford, Conn. radio station WDRC as 41°48'48"; and by showing the correct latitude of Bridgeport, Conn. radio station WNAB as 41°10'00".

(b) Chapter I, Aeronautical Facility Index with Location Identifiers, page 33, by deleting Sky Haven Airport, Albany, Ga.

(c) Chapter I, page 10, by correcting parenthetical identification for Cut Bank, Mont. to "CTB".

(d) Chapter I, page 3, by changing the identification for Albany, Ga. Range from CY to "GY"

(e) Chapter I, page 27, by changing the parenthetical identification for Orlando, Fla. to "ORL".

(f) Chapter II, Range Station and "H" Facility Identification Index, by correcting the listing under Klamath Falls FS,page 42, three letter identification to (LMT).

(g) Chapter VII, Standard Broadcast Stations, page 78, under 1230 kcs, by adding Lewistown, Mont.; page 92, by adding Lewistown, Mont., Call Letters: KXLO; Freq.: 1230; Watts: 250; Hrs. of Operation: 0600 to 2200.

(h) Chapter III, Transmitting Frequency Index, page 48, by deleting Roanoke, Va. under 317 kcs.

(i) Chapter I, Aeronautical Facility Index (With Location Identifiers), by making the following corrections and additions:

	Facility	Type		Idents.

LOCATION IDENTIFIERS: The C.A.A. Federal Airways Manual of Operations II-B-4-2 entitled "Location Identifiers" soon to be released, replaces the current publication entitled "Identification". The new manual becomes effective March 1, 1948, and involves changes in almost all of the identifiers used to identify U.S. weather reports and for other teletype purposes. It further requires changes in all of the existing two-letter identifiers for radio ranges, localizers, and type "H" facilities in the U.S., its territories and possessions to three-letter identifiers.

All of the teletype changes involved are expected to be accomplished on March 1, 1948, however the change-over program of radio ranges, localizers, and type "H" facilities will be accomplished in a gradual manner. Advance notices of these radio identification changes will be published in the Airman's Guide until all the changes have been accomplished.

In an effort to assist all concerned in becoming familiar with the new three-letter identifiers, the January, 1948 issue of the "Flight Information Manual" lists every location to which an identifier is presently assigned, immediately followed by both the current identifier and in parenthesis the identifier which will be placed in use on March 1, 1948 as the location identifiers, and on or after March 1, 1948, as the radio facility identifier. Appropriate teletype notices to airmen will be issued covering changes in radio facilities identifiers.

✓ ACKNOWLEDGMENT OF SUBMITTED AIRMAN'S GUIDE DATA: An under-manned staff prevents an individual acknowledgment of data submitted for inclusion in the Airman's Guide by telegram, teletype dispatch, or letter. Your cooperation in permitting a Guide citation to suffice as an acknowledgment will be appreciated.

TELETYPE NOTAMS: Throughout the year climatic conditions (snow storms, floods, etc.) render many fields temporarily unusable or unsafe. In addition, there are intermittent maintenance operations in progress on many fields. Radio facilities suffer temporary power failures or course misalignments, and lighting facilities are temporarily inoperative. Because these temporary conditions cannot be given immediate coverage in the "Airman's Guide", full cognizance must be taken of Teletype Notam service which gives the desired coverage on any facility or field at which teletype transmitting stations are based. Cross-country pilots, accordingly, should consult these Teletype Notams for latest available data on air navigation aids. These teletype notams are posted in CAA Communications Stations and in all Air Force Field and Naval Air Station Operations Offices having teletype drops.

AIRPORT TRAFFIC CONTROL PROCEDURES: (a) Planes with 2-way radio should establish communication with control tower when 15 miles from the airport of destination and before taxiing or taking off.

(b) Planes without receivers, when approaching tower-controlled fields, and before taxiing and taking off, should be on the alert for and be guided by light gun signals. (See AFF Regulation 100-4, dated March 4, 1944, and C.A.R. Digest or Manual 60).

(c) Flashing tetrahedron lights, as well as the daylight operation of rotating beacons, indicate that the ground visibility is less than 3 miles and a traffic clearance is necessary to enter the traffic pattern of airports within the control zone.

FOREIGN SPECIAL NOTICES

INTERNATIONAL NOTAMS: The only source of international notams is the C.A.A. Overseas-Foreign Aeronautical Communications Stations at the following locations: New York, N.Y.; Miami, Fla., New Orleans, La.; Balboa, Canal Zone; San Francisco, Calif.; Seattle, Wash.; Honolulu, Hawaii; Anchorage, Alaska.

FOREIGN ENTRY PROCEDURES, AIRPORTS OF ENTRY, CUSTOMS REPORTS, CIVIL AIRCRAFT CLEARANCE FOR FOREIGN COUNTRIES: These procedures and regulations are all incorporated into the Flight Information Manual, Volume 2, No. 2, dated January 1, 1948. Only amendments to the data contained in the Manual will hereafter be carried in the Airman's Guide.

LONDON, ENGLAND: Pilots entering or operating within this area should be familiar with all notams available at the New York International Notam Office.

N.B. The British Government has reported several violations of local air traffic rules. Disciplinary action will be taken on future violations.

FLIGHT PLAN ZONE ESTIMATES: Overseas Air Traffic Control Lagens, Azores has requested flight plans for aircraft enroute from New York Overseas Air Traffic Control Areas to or through Lagens, Azores, Overseas Air Traffic Control Area include zone estimated time of arrival as prescribed in ICAO Document 2019, Part 3, Air Traffic Control Paragraph 3.1.2

✓ **PRECAUTIONS BEFORE ENTERING GREECE:** All air carriers and others concerned are advised to use designated International Air Routes in and out of Greece. All pilots should be briefed on international visual signals between aircraft as Greeks have indicated they intend to shoot down all intercepted foreign aircraft that are not recognized or fail to comply with instructions when intercepted.

DANGER AREA IN THE VICINITY OF ENIWETOK ATOLL, PACIFIC OCEAN: Effective January 31, 1948, a Danger Area was established in the vicinity of Eniwetok Atoll, about 2400 miles WSW of Honolulu, Hawaii, by the Atomic Energy Commission. The Danger Area, which will be activated throughout the rest of the calendar year 1948, is described as follows: "Beginning with a point at 10-15 N latitude and 160-35 E longitude, N along the meridian of 160-35 E long., to a point at 12-45 N lat., 160-35 E long., thence E along the parallel of 12-45 N lat., to a point at 12-45 N lat. and 163-55 E long., thence S along the meridian of 163-55 E long., to a point at 10-15 N lat., and 163-55 E long., thence W to the point of beginning." Because of the grave hazards resulting from tests of military weapons in this area it should be categorically avoided under all circumstances until further notice.

✓ EL-ARISH AIRPORT, EGYPT DANGER AREA: Anti-aircraft and air firing practice is being conducted continuously day and night until further notice within an area of 25 mile radius centered on El-Arish Airport at lat. 31°00' N lat., and 33°50' E long. All aircraft must avoid this area.

✓ PERUVIAN PROHIBITED AREAS: The President of Peru has decreed that flight is prohibited over the following zones: Callao - lat. 12°02', long. 77°16', to lat. 12°02', long. 77°08'; to lat. 12°08', long. 77°08'; to lat. 12°08', long. 77°17'. Pisco - lat. 14°, long. 76°28', to lat. 14°, long. 76°14', to lat. 14°14', long. 76°; to lat. 14°25' long. 76°; to lat. 14°25', long. 76°28'. Matarini - lat. 16°54', long. 72°15'; to lat. 16°54, long. 72°05'; to lat. 17°05', long. 72°05'; to lat. 17°05', long. 72°15'.

AIRPORT AND RADIO NOTICES

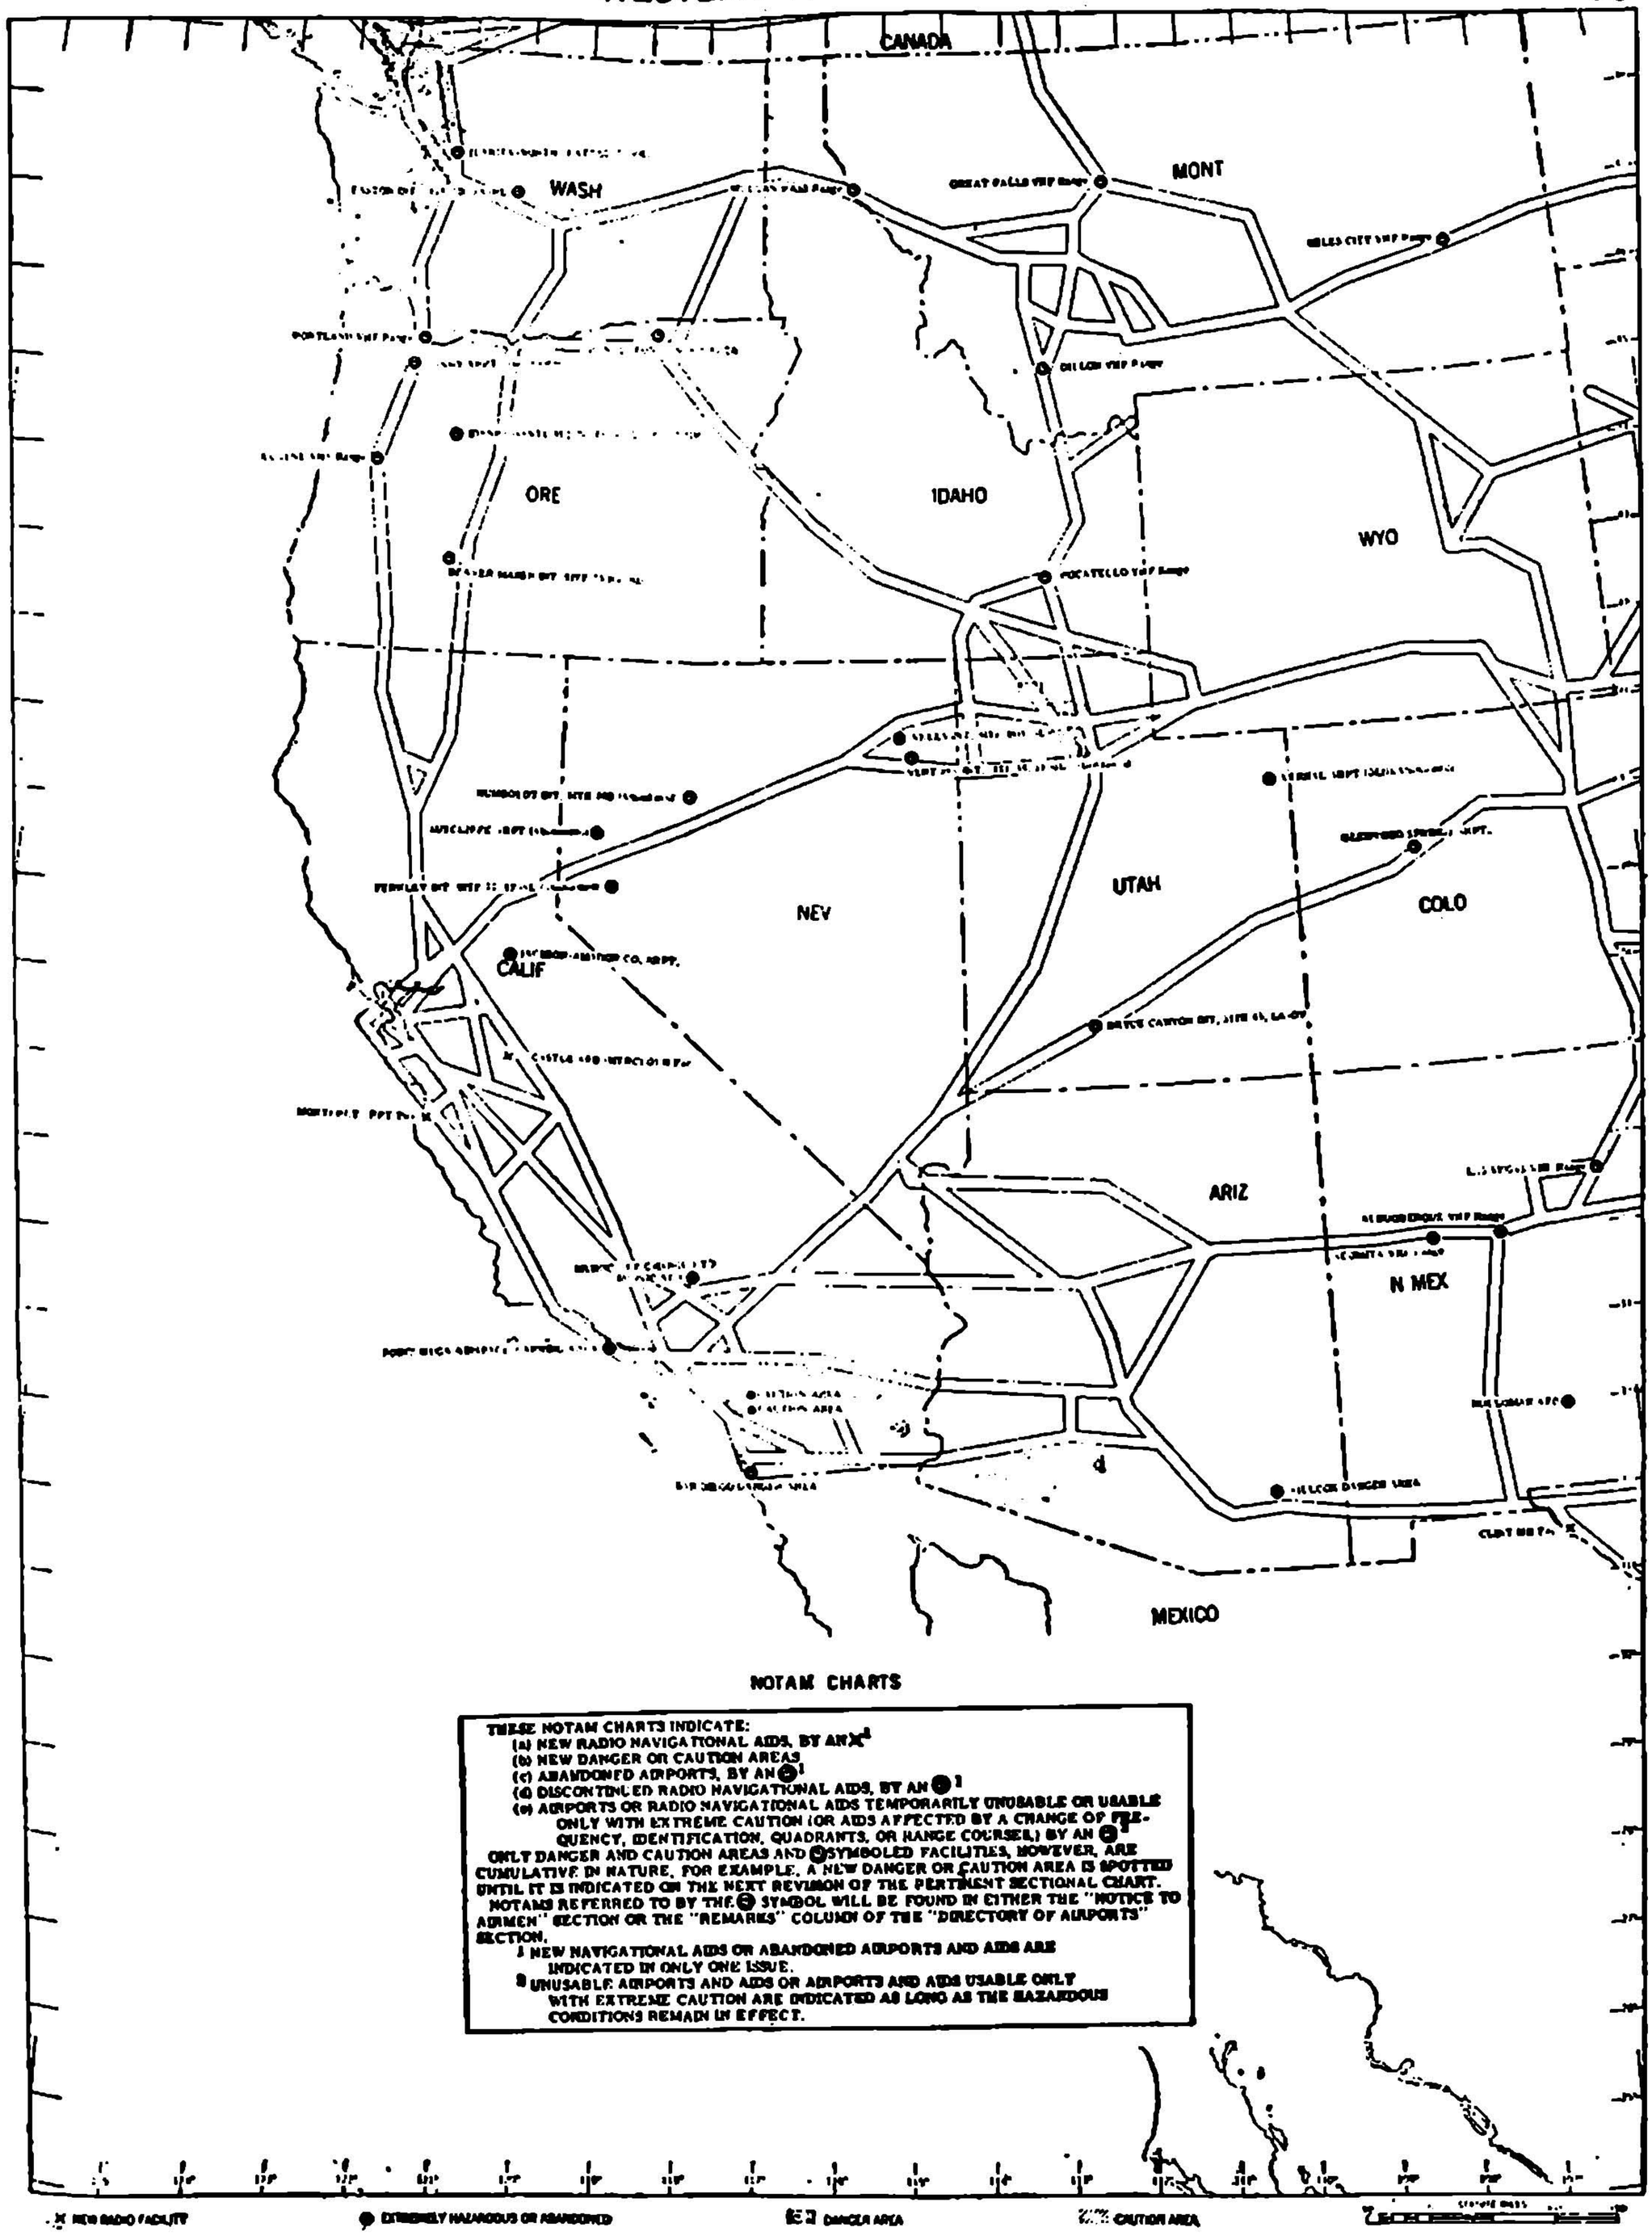
WESTERN NOTAM CHART



NOTAM CHARTS

THESE NOTAM CHARTS INDICATE:
(a) NEW RADIO NAVIGATIONAL AIDS, BY AN X[1]
(b) NEW DANGER OR CAUTION AREAS
(c) ABANDONED AIRPORTS, BY AN (E)[1]
(d) DISCONTINUED RADIO NAVIGATIONAL AIDS, BY AN (E)[1]
(e) AIRPORTS OR RADIO NAVIGATIONAL AIDS TEMPORARILY UNUSABLE OR USABLE ONLY WITH EXTREME CAUTION (OR AIDS AFFECTED BY A CHANGE OF FREQUENCY, IDENTIFICATION, QUADRANTS, OR RANGE COURSES,) BY AN (E)[2]

ONLY DANGER AND CAUTION AREAS AND (E) SYMBOLED FACILITIES, HOWEVER, ARE CUMULATIVE IN NATURE. FOR EXAMPLE, A NEW DANGER OR CAUTION AREA IS SPOTTED UNTIL IT IS INDICATED ON THE NEXT REVISION OF THE PERTINENT SECTIONAL CHART.

NOTAMS REFERRED TO BY THE (E) SYMBOL WILL BE FOUND IN EITHER THE "NOTICE TO AIRMEN" SECTION OR THE "REMARKS" COLUMN OF THE "DIRECTORY OF AIRPORTS" SECTION.

[1] NEW NAVIGATIONAL AIDS OR ABANDONED AIRPORTS AND AIDS ARE INDICATED IN ONLY ONE ISSUE.

[2] UNUSABLE AIRPORTS AND AIDS OR AIRPORTS AND AIDS USABLE ONLY WITH EXTREME CAUTION ARE INDICATED AS LONG AS THE HAZARDOUS CONDITIONS REMAIN IN EFFECT.

GCA AVAILABLE: How and Where

GROUND CONTROLLED APPROACH (GCA) AVAILABLE TO CIVIL PILOTS AS WELL AS ARMY AND NAVY: All GCA facilities (Air Force, Navy, or CAA) are available to any plane in emergency. To secure GCA assistance, pilots should call the associated control tower for instructions.

In addition to the working frequencies listed below, Air Force and Navy GCA emergency VHF transmissions are made on 140.58 mcs. Simplex service on 3117.5 kcs will be provided at all Air Force and Navy installations to provide an alternate means of communications for scheduled air carrier aircraft. Army and Navy towers will relay GCA instructions on 200-400 kcs band to civil aircraft not equipped to receive VHF or HF.

A minimum of 30 minutes will generally be required to assemble a GCA crew and prepare the equipment for operation AFTER an alert has been received at those locations not providing continuous service. CAA GCA units, however, operate continuously.

CAA GCA UNITS

DIRECTORY OF AIRPORTS

LEGEND

CITY AND AIRPORT NAME

(When city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport name* (with A in Type column) - Owned or leased totally by U.S. Air Force
(N) " (with N in Type column) - Owned or leased totally by Navy
(CG) " (with CG in Type column) - Owned or leased totally by Coast Guard
(NG) " (with NG in Type column) - Owned or leased totally by National Guard

(A) Airport name - Open to civilians but owned or leased wholly or in part by U.S. Air Force, Air Reserve, U.S. Air Force servicing detachment or contract gas usually available.
(N) " - Open to civilians but owned or leased wholly or in part by Navy
(CG) " - Open to civilians but owned or leased wholly or in part by Coast Guard.
(NG) " - Open to civilians but owned or leased wholly or in part by Army or State Government for Air National Guard. Limited servicing and maintenance for transient military aircraft.
(P) " - Civil airport open to military aircraft. (See Note 2).
* " - C.A.A. Intermediate Field.

* Air Force and Navy fields are listed alphabetically by airport name followed by city name in parenthesis.

N.B. ALL AIRPORTS EXCEPT THOSE CITED WITH AN "A" or an "N" IN THE TYPE COLUMN ARE OPEN TO CIVIL FLIERS. AIRPORTS WITH NO PREFIX ARE EXCLUSIVELY CIVIL AIRPORTS.

TYPE

A	- U.S. Air Force	I	- Intermediate	NG	- National Guard
C	- Commercial	M	- Municipal	P	- Private
CG	- Coast Guard	N	- Navy		

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified.

CLASS

(See Level Runway and Strip Requirements)

Class	Strip Length Less than 1500'	Runway (Paved) Length Less than 1500'
B-1		
1	1500-2699'	1500-2499'
2	2700-3699'	2500-3499'
3	3700-4699'	3500-4499'
4	4700-5699'	4500-5499'
5	5700-6699'	5500-6499'
6	6700-7699'	6500-7499'
7	7700-8699'	7500-8499'
8	8700-9699'	8500-9499'
9	9700' +	9500' +

RUNWAYS

In "longest" column is stated length of longest landing area in hundreds of feet.

"h" indicates landing area is hard-surfaced or paved.
"sw" indicates allway field.

No differentiation is made between runways and strips as far as number of landing areas in field is concerned. In other words, two hard-surfaced runways and two sod surfaced strips will be listed as four runways.

FACILITIES AND SERVICING

RADIO

R1: Control tower voice
R2: Range (or H facility) with voice
R3: Range (or H facility) and tower
R4: Range (or H facility), tower, and ILS

LIGHTS

L : Incomplete lighting, such as flood or strip lights, which are generally available only on prior request
L1: Beacon only
L2: Beacon and boundary
L3: Beacon, boundary, and obstruction
L4: Beacon, boundary, obstruction, and flood
L5: Beacon, boundary, obstruction, flood, and runway contact
(L5): Identical to L5 except that runway contact lights are high intensity
L6: Beacon, boundary, obstruction, flood, runway contact, and instrument approach
(L6): Identical to L6 except that instrument approach lights are high intensity

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

S1: Fuel
S2: Fuel, storage
(Any S combination in parenthesis indicates only part time or irregular attendant)
S3: Fuel, storage, minor aircraft repairs
S4: Fuel, storage, minor aircraft, and minor engine repairs
S5: Fuel, storage, major aircraft, and minor engine repairs
S6: Fuel, storage, major aircraft, and major engine repairs

REMARKS

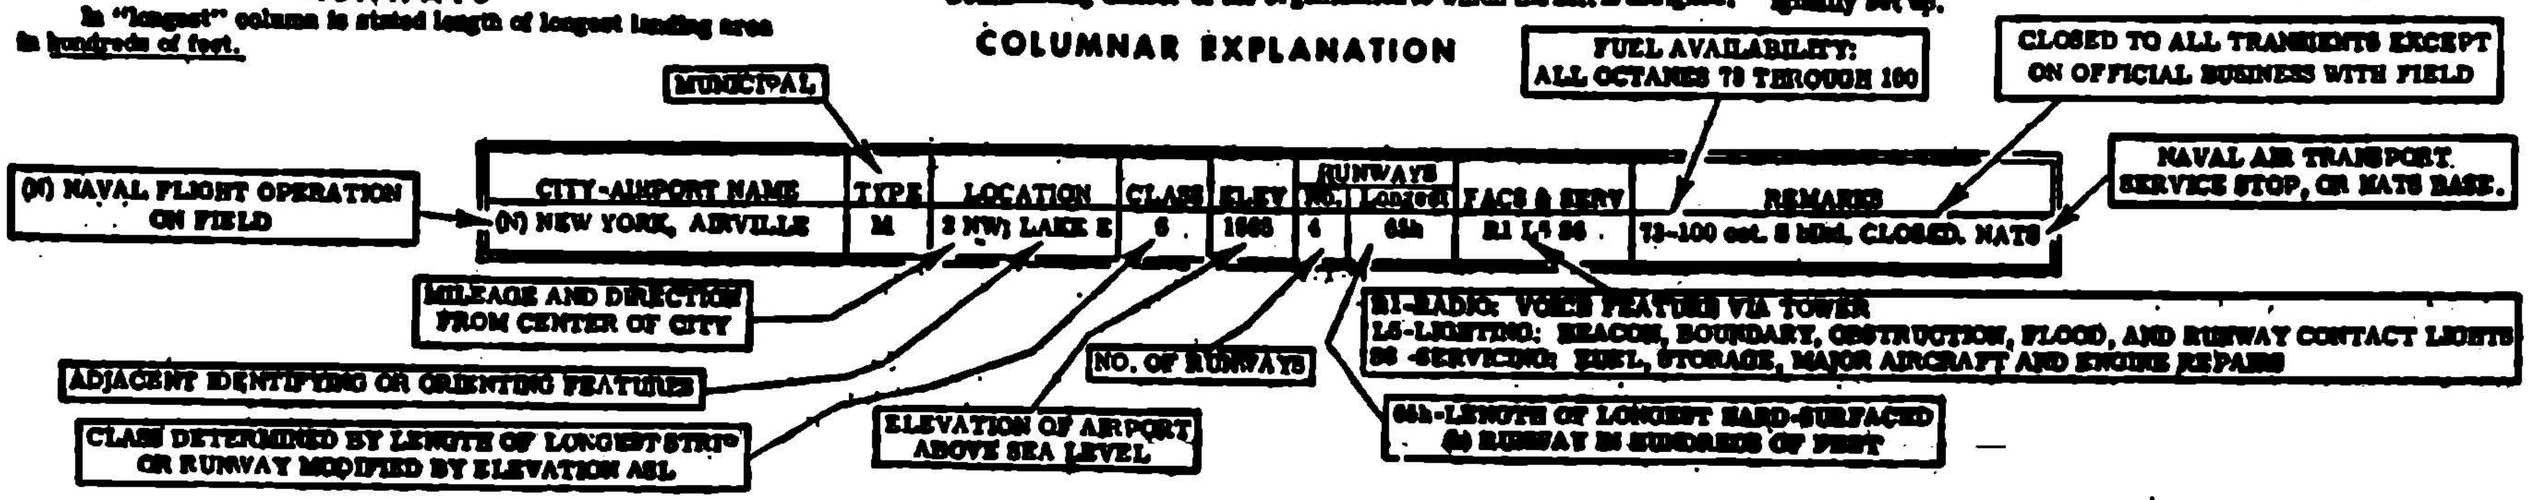
(a) "91 oct." indicates fuel octanes available. "AF", or "Navy", preceding octane indicates USAF or Navy contract fuel available.
(b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency. "CLOSED MIL" and "CLOSED NAVY" on civil fields indicate same restrictions as above are applicable to armed services.
(c) "Port. B-2 lgts" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway, or strips.
(d) "TEMP INACT.NO FACS." indicates USAF and/or Navy airfields used either exclusively by them or municipal airfields used jointly by them and civil interests at which both the USAF and/or the Navy and the civil interests are inactive. Such airfields will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the acft is assigned.
(e) "USAF and NAVY TEMP INACT. CIVIL FACS." indicates municipal airfields used jointly by the USAF and/or Navy and civil interests at which the USAF, or Navy facilities are inactive but civil facilities are available. Such fields may be used by military aircraft, however, only commercial service is avail.
(f) OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines within at least a 15-1 glide angle are indicated.
(g) "Fld lights on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly the field lights, indicated for such a lighted field, (and in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.

NOTES

1. — Notam data revising previous issues.
2. "(P)" in City and Airport Name column indicates: (1) those municipal airports improved with public funds and covered by an agreement between the municipality and the U.S. Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations, or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the Department of the Army.
3. "*Effingham, 10, L5-H" in City and Airport Name column indicates that the airport is Effingham CAA Intermediate Field, Site 10 on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the C.A.A. are listed similarly except that there is no prefixed star.
4. AIRLINE STOP airport names are capitalized.
5. PRIVATE AIRPORTS are available for owner only, and not to be used by others except in emergency. Since no servicing is available for transients no "S" combination is ever assigned these fields.
6. "BLED" indicates approaches where glide angle to runway is 3:1 or less.
7. "(Formerly Army)" or "(Formerly Navy)": These former Army and Navy fields are in the process of being disposed of by the War Assets Administration and Farm Credit Administration. Their type is difficult of determination currently and they should be used with caution as some, unable to be disposed of as airport property, are being diverted to agricultural purposes.

** At the bottom of the second column, under the heading of NEW AIRPORTS, will be found, out of alphabetical alignment, all the new airports tabulated after the type for that page had been originally set up.

COLUMNAR EXPLANATION



AIRPORT NAME ABBREVIATIONS

AFB - U.S. Air Force Base
AFF - U.S. Air Force Field
CGAS - Coast Guard Air Station
LTA - Lighter than Air
MCAS - Marine Corps Air Station
MCAAF - Marine Corps Aux. Air Facility
NAAS - Naval Aux. Air Station
NAF - Naval Air Facility
NAS - Naval Air Station
NPG - Naval Proving Grounds
OLF - Outlying Field (Navy)
